Right on the heels of the Dartnell Corporations' highly successful *Second Effort* (see page 32) comes a highly polished film on sales professionalism called *The Professional*.

The film was premiered last month at the International Marketing Conference in Cleveland. *The Professional* features a marked air of sophistication. It stars Van Johnson and Forrest Tucker in the lead roles—and all supporting characters also are accomplished professional actors.

Van Johnson sings several songs written especially for the film, and the musical backgrounds, special effects, lighting and sets match Hollywood standards.

Filmed in Chicago by Ten, Inc., *The Professional* "should be a powerful tool in the hands of companies and managers seeking to motivate their salesmen," according to Dartnell President William Fetridge.

Fetridge said that "We had an instant success on sales training programs with *Second Effort* but the early response to *Professional* is even more enthusiastic."

Preview prints are available from the Dartnell Corporation.

Hunt Adds Processing

The Philip A. Hunt Corporation has purchased the outstanding stock of M Photo Co., Inc., and its affiliates, which have their principal offices in Harrison, New Jersey.

The acquisition will reportedly give Hunt a high-quality processing laboratory for amateur and professional photographers which will give the Research and Development the necessary insight into the needs of the industry.

Bits & Pieces

Under the U.S.—USSR Cultural Exchange Agreement, USIA opens an exhibit featuring industrial and multi-screen in Leningrad July 1 entitled "Education—USA" . . . Congratulations to Crawley Films Ltd. this year celebrating their first year of producing top flight for business and industry, with ten staff members with more than 20 years with the firm. Our thanks to Judy Gold for the profile silhouette which appeared at the top of this column.

TOOLS, TECHNIQUES AND IDEAS FOR AUDIOVISUAL COMMUNICATIONS

Special: NAVA Preview
Exhibit Guide

Send your company to college.

Introducing a new way to reach college students with your company message.

It's called College Cinema—the exciting new audience program developed by Modern to supplement our regular films-by-mail service.

Through College Cinema, you can achieve even more effective penetration of the college market through its favorite medium—films.

Here's how it works: Modern sets up free movie lounges in the student unions and dormitories of selected colleges and universities. We supply the projector, projectionist, delivery, and programming—all free of charge. And we show business films several hours every day.

If you've got a film about your company or your product... a recruitment film... or one that simply entertains, there's no better way to reach this sophisticated audience. That's why dozens of alert companies are already telling their story to thousands of students via College Cinema.

Right now, we're showing company films on some 100 college campuses throughout the country. By the end of the school year, these films will be seen by three million student viewers. And the number can only get bigger.

If you'd like to know how to send your company to college, contact Modern. We're very big on campus these days.

MODERN TALKING PICTURE SERVICE, INC.
1212 Avenue of the Americas, New York, N.Y. 10036

Sure, you've got some great sales films. But how do you get your salesmen to show 'em?

*With the
Technicolor 1000—
of course.*

Sales films really sell. But who likes to use 'em? No one. Not with all the complicated, heavy equipment you have to cart around. That's why the Technicolor 1000 cartridge-loading Super 8 movie projector makes a big hit with salesmen. It's 19 lbs. light. Just snap in the sound film loop cartridge (with up to 29 minutes of film) push the "go" button and the show is on. No threading, no rewinding. Why don't you look into converting your current sales films to Super 8 sound film loops. It's surprisingly inexpensive. Just contact Technicolor. We'll help you put your films on the road!

Technicolor*

NOTHING BUT THE BEST

65 K Street, Northeast, Washington, D.C. 20002 • 202-783-2700
The World's Most Sophisticated Film Lab

the integral film gate — or the split-film gate magazine system?

There are two magazine systems used among makers of 16mm self-blimped professional motion picture cameras. One design splits the film gate, mounting the gate itself on the camera and the rear pressure pad on the magazine. The other design, favored by Arriflex, has the complete film gate assembly in the camera head. Which is better for you?

The very purpose of a professional motion picture camera is to be as rugged and reliable as possible and to produce footage which is as sharp and steady as human ingenuity can make them. The exact travel of the film in the image plane of the lens and its precise positioning in relation to the optical axis, frame after frame, at 24 frames per second, is one of the most critical and also important features of a professional camera. The necessary mechanical precision can only be obtained economically in an integral film gate, built into the camera head, where all required tolerances can be controlled and maintained, and where it remains protected and secure.

When part of the gate is in the magazine, there are too many shortcomings. Here are some, not necessarily in the order of their importance:

COST: It makes the magazine much more expensive (at least twice as much) for not only must half the gate be paid for with each magazine, but also the complex part which locks against the camera head. Consider that the average professional camera outfit requires a number of magazines and you realize that we are talking of thousands of dollars.

MECHANICAL TOLERANCES: It is very difficult and costly to maintain mechanical tolerances between magazine and camera head. If the magazine fits too tight, film may jam. If it is too loose, film may breathe and lose focus. This is further complicated when filming in extreme hot or cold temperatures. It may even be necessary to have individual magazines fitted to individual camera heads.

WEAR AND TEAR: Having half the gate exposed on the outside of the magazine makes it susceptible to knocks and blows which may cause expensive repairs. It can get wet in the rain, it attracts dust and dirt, and is difficult to keep clean.

NO SINGLE SYSTEM SOUND: When you buy an expensive professional camera, you always want to have the possibility of adding this important feature. It is easy with a camera like the Arriflex BL. Practically impossible with split gate magazine cameras, unless you want to build it into each magazine. WOW!

IS IT REALLY FAST?: If everything happens to work just right, it may take a few seconds less to change a split gate magazine than an Arriflex magazine. But if the loop does not form properly or the perforations do not engage properly—as happens often—and the magazine must be taken off again and again, it takes much, much longer. It is also much more difficult and it takes longer to load split gate magazines in the darkroom or changing bag.

LAST BUT NOT LEAST: In all Arriflex 16 cameras, the film gate is a permanent and fixed precision part of the mechanism. It can be opened for cleaning or checking, without removing magazine. The transport claw enters the sprocket from the emulsion side and the registration pin enters from the base side. Positive control at all times. It is simple and fast to load. It is reassuring to be able to watch the first foot or so of film going through the loops and the film gate with the camera door open.

The integral film gate is just one of the basic features that make the Arriflex 16BL the most capable, most versatile portable sound camera in the world. We invite you to write for our 10 page brochure that describes all of its other professional operating advantages.

AMA's Education, Training Meet Slated in August

The American Management Association's 5th Education & Training conference will be held August 11-14 at the New York Hilton.

The conference will be held concurrently with the association's Education & Training Exposition equipment show. The equipment exposition opens on the 12th.

A highlight of this year's conference will be panels and discussion groups evaluating the scientific and technological tools for teaching and training.

Among the techniques and hardware to be considered at the conference will be multi-media training closed circuit television, video tapes, films, data banks and communications technology, mic-

rofilm, software, computer technology in learning systems, programmed instruction and simulation and games.

Information about the conference may be obtained from the American Management Assn., 135 W. 50th St., New York, N.Y. 10020. Free admission cards to the exhibits may be obtained from Clapp & Poliak, Inc., 245 Park Av., New York, N.Y. 10017. The New York Hilton is holding a limited number of rooms for those who wish to attend conference or exposition.

5th Chicago Festival November 8-19

The 5th Chicago International Film Festival will be held November 8-19 in Chicago. Exact

locations of various categories will be announced later.

In addition to competition and screenings of films in eight festival categories, special lectures, seminars and film retrospectives are scheduled as part of the program.

Additional information may be secured by writing the 5th Chicago International Film Festival, 235 W. Eugenie St., Chicago, Ill. 60614.

Magnasync/Moviola, Craig Sign Merger Agreement

Magnasync/Moviola Corporation and Craig Corporation recently signed agreements leading to a proposed merger of the two companies.

The agreement calls for one

share of Craig common stock to be issued for each share of Magnasync/Moviola's 1,549,127 shares outstanding.

The proposed combined entity will be known as Magnasync/Craig Corporation. After the effective date of the merger, Robert Craig will be president of the new Corporation.

UFA's 23rd Conference at Penn State in August

The University Film Association (UFA) will hold its 23rd annual conference August 18-22 at Penn State University in University Park, Pa.

The week long program will include sessions on film production, teaching and research.

Low Cost, Ready to Use Background Scenery

Inexpensive, pre-fabricated scenic backgrounds are now available for motion picture production. No longer is it necessary to plan on spending large amounts of time and money constructing sets in the conventional manner. With our pre-built, complete realistic scenic units, all components needed for a set are available in ready to use 4' x 8' panels. All you have to do is prop them up and start shooting. For example, that solid oak paneling you see in the photograph isn't really genuine but you'd never know it. That set was put together in less than an hour by one man! We call it "instant scenery" but on camera, the look is completely authentic and just imagine the potential savings in manpower and budgets.

We have a whole collection of different backgrounds available, all equally as realistic. English, Italian, Spanish and French panelings, brick wall, fieldstone, logs, shingles, roof tiles and bamboo siding are just a few of the many settings we supply. Each unit is a fully dimensioned, precisely detailed replica of the real thing hand painted in true to life colors. If your company needs authentic but inexpensive scenery that sets up in a hurry, and is also easily stored, just check with us. Chances are, we've already got it made up for you.

New York Festival Sets October 14-17 Dates

The International Film & TV Festival of New York has set October 14-17 as the dates for this year's awards ceremonies.

The festival, held at the Americana Hotel is now in its 12th year and presents awards in several categories for business, educational and television films and commercials.

Details and application blanks may be secured from Industrial Exhibitions Inc., 121 W. 45th St., New York, N.Y. 10036.

Kodak, Fairchild/Eumig Show Compatible Cassette

Among the most significant new products unveiled during the recent Photo Expo '69 in New York were the introduction of the new Eastman Kodak Ektagraphic 120 projector and the Fairchild/Eumig 711. Most important is the fact that both projectors (plus a third marketed under only the Eumig name internationally) use the same type cassette Super 8 cartridge designed and licensed by Kodak.

The Ektagraphic 120 silent projector uses 50 or 100 foot cassette type cartridges that are interchangeable on two other new Kodak projectors. Kodak simultaneously announced a new packaging service which would enable customers to receive processed movie film in a 50-foot cartridge ready for showing.

The Fairchild/Eumig 711 projector adds the versatility of magnetic sound to the same cassette. The new projector is the first in history that accepts a cartridge identical to and fully compatible with equipment of different manufacturers.

The magnetic sound, plus-18 Super 8 film standard is identical

Cartridges like this are the heart of the new Super 8 projection system introduced by Kodak and Fairchild/Eumig.

with the format adopted by Eastman Kodak in the U.S., and by Eumig of Austria.

Both projectors could have a significant impact on industry and education by expanding the use and distribution of existing Super 8 films, and representing a first step toward Super 8 standardization.

AudioVisual Concepts Now The Communications Group

Audio Visual Concepts, Inc. has acquired a new corporate name: The Communications Group, Ltd. Based at 53 Stearns Street, San Francisco, CA 94105, the firm is a producer of audio-visual materials with major emphasis on motion pictures.

Industrial Marketing Associates, a marketing and advertising agency with particular orientation to film and other audio-visual media, has been acquired and will operate at the same address as a unit of The Communications Group, Ltd.

S.O.S. Sets Miami Branch Conklin Sales Manager

S.O.S. Photo-Cine-Optics, Inc. has opened a new branch facility stocked with equipment and supplies, in the Miami area. The new facility offers S.O.S. customers in the southeastern U.S.A. services and supplies that heretofore were available only out of New York.

S.O.S. will occupy a building at 51 East 10th Avenue, Hialeah, Florida together with F&B/C Inc., a sister division of F&Ceco Industries Inc.

Wallace "Marty" Conklin has been appointed Florida sales manager for the branch. He was previously assistant manager of the firm's New York facility.

**We've added
SUPER 8 FILM
CARTRIDGES
to our
videotape
line-up!**

That puts us in a league by ourselves!

We're starting off the season with a pennant winner, having added SUPER 8 CARTRIDGES AND REELS to our already outstanding clubhouse of stars. Any type cartridge may be used . . . and you get top quality sound and picture because of our outstanding equipment including a tube with special picture enhancement. Nobody, but nobody, can boast of the addition of SUPER 8 CARTRIDGES AND REELS, in color direct from videotape. Our roster includes both optical and magnetic tracks.

You'll cheer this revolutionary idea when you see you can get the full service of 16 mm on Super 8 and do it so economically.

Let us go to bat for you.

Tawil New President of Berkey-ColorTran

Joseph N. Tawil has been appointed as president of Berkey-ColorTran, Inc. In his new post, Tawil will be responsible for the management and operation of the California based division which markets lighting and production equipment.

Prior to his new appointment, Tawil was eastern marketing manager for Berkey-ColorTran. In addition, he has been instrumental in the development of some of the lighting equipment now being used by many television stations in the east.

major operational improvements. Libra's intent is to develop a comprehensive communications complex in the film, television and music industries.

Arriflex Promotes Two Executives; James, Harris

Arriflex Corporation of America has promoted Victor James to executive vice-president and general manager and Bruce Harris as vice-president marketing.

James has been with Arriflex Corporation and Kling Photo

JAMES

HARRIS

Merle Kremer Named to Head Sylvania Lighting

Sylvania has assigned Merle W. Kremer to head Sylvania Lighting Products. Kremer, a senior vice president since 1962, will have over-all responsibility for this major operating group headquartered in Massachusetts. Kremer succeeds Garlan Morse who has been elected executive vice president.

Kremer joined Sylvania in 1955 as general manufacturing manager of the parts division and was named vice president and general manager of the division in 1958; three years later became vice president and general manager of the Electronic Tube Division. His election to senior vice president, Sylvania Electronic Components, was in 1962.

Corporation for more than 10 years and is widely known for his work with film makers, government, industry, science and education, TV and theatrical production.

Harris will have full charge of sales and all marketing functions. He has been with Arriflex Corporation for seven years and previously served as administrative assistant to the president.

Radiant Names Eastern, Western Sales Managers

Radiant Screen & Sales Co. has appointed Mel Levy and Frank Bufano as sales managers. Levy will be responsible for the eastern United States and Bufano for the western . . . both men will have their headquarters in Chicago.

Levy joined Radiant in 1962 as sales administrator to the vice president and prior to that with Interphoto Corporation.

Bufano originally started with

Sperber Named VP-Sales At Libra Productions

Sam Sperber has joined Libra Productions as vice president in charge of sales. Formerly an executive with Pelican Films, Sperber's appointment marks the latest in a series of expansion moves taking place at Libra.

Libra is currently undergoing

PLEASE RUSH!

You pride yourself on being a good on-time producer. But how many times have you been caught in unforeseeable delays during writing, production and post-production phases of the show?

Too many to remember?

Then you said to the lab: "I know we're late, but we've just got to meet our deadline."

At Capital we realize that this is the nature of the business: "PLEASE RUSH!" So we've done something about satisfying your needs—like using an IBM Production Control System; building a scene tester that's compatible with Bell and Howell's modern color additive printers; printing from double rank internegatives for higher quantity—and quality.

We're used to rushing for you at

Organize and file your audio visual materials efficiently in Standard/LUXOR AV materials libraries

Tens of thousands in use in America's schools!

As shown above \$229 to \$331 depending on your AV Materials Library requirements. 19 1/2" W x 17 1/2" D.

Build your AV materials library to meet present and future needs... Arrange and rearrange at any time

Standard/LUXOR matching and lock-stacking Audio Visual Materials Libraries offer unlimited expansion and growth to meet your requirements— for what you have now and acquire later. Three sizes are available to best suit your space and storage needs: 39" (shown at right), 19 1/2" (left) and 10 1/2" (not shown). Depth, 17 1/2". All give you quick and easy selection and organized, efficient filing of your AV Materials.

Add-a-Unit as your library grows!
For convenience and accessibility, floor bases, with or without storage compartments, are available for all libraries.

Lock-stocking Modular Units
Standard/LUXOR AV Materials Libraries are hammerloid gray or LUXOR Brown. Custom finished in other colors on special order. Please submit color sample and add 15% to price of each unit.

LUXOR Record System helps you get more from your AV materials library and meet ESEA regulations.

The LUXOR V-File holds 1,000 cards (up to 21,000 bookings) and has hinged "fan-out" wings so cards do not need to be removed for entries. Has a filling device for writing ease. Gray finish, steel construction, with 3 chromed tracks to hold cards and dividers in place. 11"D x 8 1/2"W x 7 1/2"H. Opens to 20 1/2"D. Plastic cover and 37 plastic see-through index dividers. Shpg. wt. 7 lbs.
No. 73 LUXOR V-File Only...\$42.90

Color coded record cards in packs of 100 Ea. Pkt. \$5.80

head all domestic and overseas sales activities arising out of the production company and its subsidiaries.

Three To New Berkey Photo Executive Posts

Berkey Photo has appointed three executives to newly-created posts.

David McKearnan was named vice president-marketing and manufacturing; Seymour Dunn, secretary and director, was appointed assistant to the president; and Herman Margules has joined the company as assistant treasurer.

Bill Stokes Names DuPont Executive VP

Larry DuPont has been named executive vice president of Bill Stokes Associates, Inc., audio visual design and service, Dallas.

DuPont was formerly vice president in charge of radio-TV for Tracy-Lock Advertising for fifteen years.

Delkin Becomes Partner In Sunset Films

Fred L. Delkin, Jr. joins Sunset Films, a Oregon based commercial and educational film production firm, in the newly created position of vice president, marketing-creative, also becoming a partner and stockholder.

Sunset has also added Jack Kerpan as production manager.

Three Ampex Division Managers to VPs

Three Chicago-based division managers of Ampex Corporation have been elected vice presidents of the corporation.

Ronald C. Ballintine becomes vice president, general manager of the educational and industrial products division, which produces closed circuit television equipment.

Donald V. Hall becomes vice president, general manager of the Ampex stereo tapes division, which manufactures and markets prerecorded stereo tapes for the consumer market.

E. Peter Larmer becomes vice

president, general manager of the consumer equipment division, which produces audio tape recorders and related equipment for the consumer market.

Dever Eastern Marketing Mgr. for Berkey ColorTran

David A. Dever has been named eastern marketing manager for Berkey ColorTran, Inc. Prior to his new appointment, Dever was southern marketing manager for the firm.

Around the Industry

Among the newly-named executives for Modern Talking Picture Service are: *Jack Whalen,*

western sales manager replacing *Robert A. Kelley*, who has been assigned the newly-created title Director of Public Affairs at the Washington office; *Hal Smith*, field operations manager of North-Central Division; *Larry Gunter*, field operations manager of South-Western Division; *Curtis Hensley*, Houston branch manager; and *Harry Sanford*, Los Angeles branch manager . . . *Arthur D. Gaines* has been promoted to general manager of marketing and sales for Superscope, Inc. . . . Slip the end of a video tape around the hub of one of our new Plio-Magic reels and it won't slip off. An exclusive Tape-Tac coating keeps the tape in place—perfectly flat, snug and secure—until you unwind it. Without slippage, ripples or wrinkles, or damage, either.

Our high-impact reels resist cracking, bending and breaking. And each reel,

available in 8"x2", 6½"x2", 8"x1" and 6½"x1", comes in its own metal-core shipping carton, so tape can't shift in transit.

With all this going for it, you would think our new Plio-Magic Tape-Tac video tape reel would be expensive. Think again. It's the *most* economical on the market. Call or write for details.

Build Audiovisual Projection Sales Match the Markets to the Media to

THERE'S A FASCINATING new multi-media device in which the student can work with all sorts of sight and sound gadgets from live television to 35mm color slides and tapes. Virtually every learning experience has been recreated. Trouble is that this audiovisual equipment costs as much as a whole school might invest in 16mm or Super 8 sound projectors and it might conceivably supply a school system with filmstrip or overhead projectors with the same budget.

Then, too, there's the problem of maintenance and repair. Nobody in Pomona Springs even knows how the monster really works, least of all the audiovisual dealer who might have sold it.

Absurd as all this sounds, it's the kind of "in vitro" thinking by designers and engineers that helps create new sight/sound tools unrelated to the real needs of the marketplace or to the practical problems of teaching, training and selling through a-v media.

Such ventures are about as hazardous as space travel to the Moon, especially when the manufacturer fails to *really study* the market before announcing products which are non-standard, require *very special* visual media, *entirely new approaches* to sound reproduction which don't really "fit" the curriculum, the training program or the selling and public relations objectives of industry.

Ultra-sophisticated "hardware" intended for the nation's schools brought on LIFE's recent gloomy comments about the future of audio-visuals in the classroom. But this should be related, of course, to the experience of that periodical's owners, Time, Inc. and its unprofitable venture with GE in General Learning Corporation.

Consider the realities of the present school market. Despite the generosity of the Ford Foundation, educational *classroom use* of television is hardly commonplace. What "standard" in the nation's schools are the hundreds of thousands of 16mm sound prints of classroom teaching films created by Encyclopaedia Britannica, Coronet, McGraw-Hill Text Films and Film Associates, to name just a few of these specializing sources. What is "standard" in the nation's elementary and secondary school classrooms are tens of thousands of hard-working 16mm sound motion picture projectors, 35mm filmstrip projectors, overhead and opaque projectors and both disc and tape recorders.

Super-8 projection will travel as far as the producers of classroom films encourage its development through 8mm sound versions of their product. But should they invest in magnetic or optical sound versions of their films? Film laboratory sources await standards.

Seriously, our long-felt conclusion that the true *nationalization* of "visual education" could have emerged from the lowest-cost 32mm filmstrip projector combined with vastly-increased, low-cost filmstrips is still a much more practical answer than all the ultra-sophisticated hardware confronting us today. Perhaps there will be a parallel in the wide acceptance of simple and economical Super-8 classroom-designed sound motion picture equipment.

You have to really *know* the characteristics of today's markets. The manufacturer should recognize that school appropriations swelled by the post-Sputnik psychology which brought Federal Aid are today influenced by organized teacher demands for higher salaries. So much so that a leading Chicagoan recently cited the effect of these wage demands as

Take the 5-second "instant expert" test

New RCA Super 1600 Automatic. It threads itself.

Five seconds—that's all it takes. Flick on the switch—the Super 1600 16mm sound projector does the rest. You're an "instant expert" because *it threads itself*. In just five seconds! Thanks to RCA's exclusive "Safe-Threader", movies are easier to present than ever before!

But there are many reasons for buying the Super 1600. Economy, for example. Unlike other automatic threaders, the RCA "Safe-Threader" never touches the film. So it never causes wear.

Convenience, for example. Set-up

takes all of one hand. Flip-up reel arms, a smooth tilt mechanism for quick picture alignment, and a precision rack and pinion focus control, get your picture on the screen in a hurry.

Ease of operation is another reason. Fewer and easier operating controls virtually eliminate the age-old headache of fumbling around to get the show started. If you want to reverse the film—just throw a switch. It's that simple.

Naturally, the sound from the Super 1600 matches its brilliant

pictures. The new 15-watt all transistor amplifier and built-in speaker brings you sound as close to life as you can get.

Call your local RCA Audio-Visual Distributor. Ask for a demonstration. Then run it yourself. You'll feel like an expert—*instantly*. For instructive brochures, write: RCA Instructional Electronic Systems, Bldg. 15-5, Camden, N. J. 08102

diminishing the funds for instructional materials.

This audiovisual market paradox does not quite hold for business and industry. But another factor, the centralization of large corporate ownership and the trend to conglomeration, underscore the large purchasing power held by the 500 largest U.S. companies. Stretched to cover real potential customers with 100, 250 or 500 employees, the major a-v industrial market consists of *less than 10,000 real prospects* among U.S. companies.

Qualify such prospects by the fact that films or videotapes have to be created before the user has any need for projection equipment. Count the total number of active sponsors of either programmed internal training or informational media or external sales or public relations films/tapes, etc. Our forthcoming Survey of Sponsor A-V Activity, including motion pictures, slidefilms and all types of "audiovisual presentations" will be an interesting check-list of the market.

The conclusions are inescapable and vital to equipment marketing. The future of any type of projector is directly related to (a) the kinds of *media practically used and useful* to business and industry; (b) the standardization of such tools to accommodate most widely-used media; (c) the ease of creating such tools according to accepted standards of production and processing.

Add another vital ingredient: the accessibility of maintenance and repair or replacement facilities for the projector offered. It is in this area that most dealer-members of the National Audio-Visual Association have a basic role and responsibility. And why it makes sense to tie the regional branch or sales-office acquisition to this local a-v dealer-maintenance source.

Considerable money expended to "prospect" for potential users of audiovisual equipment may bring out some "first-time" buyers, even though the profit-margin will diminish. But it makes real sense to pre-test and sell to known buyers. If the projector can't pass the experienced analysis of a company audiovisual director, multiplied by the growing ranks of such men, why would it be any more useful to less knowledgeable businessmen?

Yes, the time for market analysis is during the period of product analysis, when *first models* are truly ready for field testing and consultation with prospective customers. Then is the time to find out if the new projector really fills a proven need. And when the manufacturer has conclusively proven to himself and to the user that his "hardware" has the "software" to keep it actively in use through all of its potential life in the field. •

The survival of the fittest:

Darwin put it into words. Evolution. Elimination of the less suitable. Improvement of the breed. What's good survives; the rest fade out.

We put it into action. For as it is true with man, so it is true of machines. Those that function better, more efficiently, make it. Those that don't, don't.

At MPO we've been having a technological evolution ever since we brought out our first repeater projector. And our evolution is still going on.

We felt our Videotronic Super 8 projector would function better with permanent lubrication. So we did it. Put permanent lubrication at all major points of friction.

Then we put our minds to coping with today's increasingly rugged shipping conditions. To improve our projector to better withstand them. So we strengthened the metal bed plate and all side components. Strengthened the outside case and added metal shields to all corners. Reinforced the mountings of the lid state amplifier and the amplifier self.

Next, we focused on the actual functioning of the projector. Because some of our customers used the projector in the tropics, they wanted an oversized cooling system. So we improved the blowers and air flow to enable our projector to keep cool under the most extreme heat conditions.

Our attention then turned to overload problems. Other projectors were failing them. We didn't ever want such a

possibility. So we increased our motor capacity. And redesigned our motor drive system to cope with frequent overloading.

The film itself can occasionally cause problems. And we were out to anticipate those. We altered the film gate and the sound head so they can better withstand the abrasive conditions imposed by the occasional poorly slit and excessively dirty film. But with all our improvements over the years, we—and all the other projector manufacturers—have still been plagued by occasional film breakage...

Now. The most important technological advancement in the history of loop projection.

In the process of working on these film problems, we developed an improved Super 8 film cartridge.

Our latest cartridge has a metal film guide that positions the film as it's drawn

from the center of the coil. We've also added metal strips in the plastic platters. Now only metal touches the film's edges. We further strengthened the cartridge's long wearing capabilities with rollers of new wear-resistant plastics. Result? Virtually the end of film breakage. Our new cartridge does away with center film breakage due to surface dirt. It also prevents any damage from a pronounced "set" in the film from inactivity.

And so our evolution goes. And so it will go on. Because thousands of customers are using our projector. In the field, where it really counts. Because we're constantly in touch with them. Making modifications to their needs. And doing our own extensive tests in the lab as well.

And because we're continually refining and improving our projector, our Super 8 projector always is new, refined and bettered.

The simple yet complex process of evolution.

The survival of the fittest: MPO Videotronic Super 8

"Instant Meetings" Speed Sales, Customer Education

After equipping salesmen with portable, cartridge loading projectors, Cabot Corporation its Cab-O-Sil sales rising as customers achieved quicker understanding of the product via the salesmen's on the spot showing of the film.

MIRACLES POURING from today's chemical industry can change marketing and manufacturing methods overnight. Informing potential customers of these developments and their possible applications is a major job of consumer education.

Cabot Corporation of Massachusetts encountered this problem when they developed Cab-O-Sil fumed silica. Cab-O-Sil has a wide variety of industrial uses such as thickening liquids and making powders flow freely without clogging and sticking. The complex and versatile nature of the product made it necessary to educate potential customers to its possible application.

Initially, Cabot Corporation planned to solve this problem by holding large seminars for up to 100 potential customers at a time. The seminars were scheduled to last four hours. However, it quickly became apparent that assembling 100 chemists for a four-hour presentation was not only difficult but inefficient. The seminar approach was used until Cabot Corp. could make a film.

The result was a 25-minute motion picture on 16mm film—but, again, it proved to be an unsatisfactory solution. It was, in a sense, a filmed seminar, still designed for a reasonably large audience and requiring elaborate planning.

Film approach valid

Although Cabot Corp. felt the filmed approach was valid, it was obvious that the presentation technique was too cumbersome. The 16mm format often required large audiences to make a showing worth the effort. A new projector and film format were needed that would be easy to use and capable of doing the

job for both small and large groups. To avoid delays and complicated schedules caused by working with rented projectors the company considered purchasing their own. The projectors not only had to be inexpensive, but durable enough to withstand rough riding in the trunk of a salesman's car. Cabot Corp. investigated the Technicolor 1000 super 8mm cartridge loading portable movie projector.

"Actually," said De Vito, "I saw an ad for the Technicolor 1000 and arranged for a demonstration from a local dealer. I checked out the unit with some of our salesmen to get their reaction. It was all positive."

The 16mm Cab-O-Sil story was then reduced to the super 8mm optical sound format used by the Technicolor Model 1000 Salesmen were provided with the film and a Technicolor 1000 projector.

"Phenomenal" results

"The results were phenomenal," said De Vito. "Where before it would take a number of days or weeks to schedule meetings with the 16mm projectors, the Technicolor 1000 provided instant meetings.

"Our salesmen have found that it is no longer a chore to show the film," De Vito noted.

"Cabot Corp. is an aggressive, modern and well organized company. We're very pleased that the Technicolor 1000 helps us perpetuate this image — while still getting across our message. In fact, the Technicolor 1000 system has been so effective for us that it will carry our message at an exhibit this year in Italy. The projector will show our film with a new sound track translated into Italian," said De Vito.

**The Beaulieu R16B "Automatic"
isn't the only 16mm reflex camera
with a mirrored shutter.**

But the other ones cost at least twice as much.

The mirrored shutter is one of the most critical differences between ordinary cameras and precision cameras. The Beaulieu's mirrored shutter is the guillotine type, angled at 45°. When it's open, all the light passes directly onto the film through the finest 12-120mm zoom lens made, the Angenieux. And there's no prism interfering between the lens and the film to cut down light intensity. When the shutter is closed, it's bouncing all the light through the reflex viewfinder. So your eye is getting the same brilliant, sharp image the film is. There are no parallax problems. There's no guesswork.

Monitoring the light is the finest automatic exposure control system ever built. The heart of it is a Gossen light meter, located behind the lens and linked electronically to a miniaturized servomotor that rotates the Angenieux's iris diaphragm ring. This system keeps the lens aperture constantly at the correct exposure setting, no matter how rapidly the light is changing.

Another advantage of the R16B "Automatic" is its weight, or lack of it. The

100 ft.-load camera body (less lens) weighs a remarkably light 4¼ lbs. And even when you load it up with a 200 ft. magazine, a sync pulse generator, and the Angenieux 12-120mm zoom lens, it still weighs only 10½ lbs., *including the battery!*

It's a nickel cadmium battery, and it's built right into the camera handgrip. Powerful? Beaulieu's 1000mA battery will roll 1600 ft. of film on a single charge. And you can replace it with a fully charged spare in seconds.

Not having to wear a battery strapped around your waist or swinging over your shoulder can make quite a difference when filming. Particularly when you want to hook up your Beaulieu with a professional recorder, like Nagra or Uher, for sync sound filming.

Wondering about the price? Then add up all the features of the camera—light weight, rock steady pictures, automatic exposure control, an electronically regulated motor, and a mirrored shutter. Then add to those features some rather important optional equipment—a 200 ft. daylight-load magazine, a sync pulse generator, an Angenieux automatic 12-120mm zoom lens, and a rechargeable nickel cadmium battery. The whole package comes to a little over \$2,650—at least half the cost of any other precision camera with a mirrored shutter.

From the pioneers of rear-screen projection
**Advanced audio-visual
 film projection systems**

SLIDES

BUSCH Cine-Slide Projectors have many special features, including: Big 14" x 14" built-in Daylight Screen; 80-slide capacity; automatic or manual operation with Kodak Carousel projector. Available with or without sound unit. The Busch Cine-Slide Projector is versatile, dependable, portable and lightweight.

16 MM

BUSCH Cinesalesman self-contained, continuous 16mm projectors are dependable, portable, versatile. Available in variety of models to meet any requirement for continuous or rear-screen projection. Unit has 20 years of proven performance with many patented, exclusive features found only on world-famous Busch Cinesalesman projectors.

BIG SCREEN

The Big Screen 16mm continuous BUSCH Cine-Educator Projector is dependable, self-contained, mobile and beautifully finished in Walnut Formica. Special features are: push-button start; automatic cycling stop; auxiliary cooling system, and high-quality sound. Heavy-duty projector units with many exclusive features. This unit can also be supplied with Slide Projector in place of the 16mm Projector.

SPECIAL UNITS

We have 25 years of experience in the design and manufacture of complete Audio-Visual systems for schools, business and government. We can engineer and manufacture any requirement you may have for Special Projection devices or systems such as multi-screen projection systems, synchronized projection, complete remote control or projectors and many others.

**Virginia Slims Campaign
 Top Winner in American
 TV Commercials Festival**

Young & Rubican top agency winner.; Horn/Griner leads production company winners. Entire advertising industry cited for Public Service "involvement."

A TOTAL of 58 "Clio" statuettes were presented at the Tenth Annual American Television Commercials Festival for-

Top award winner in festival was Virginia Slims "You've Come A Long Way, Baby" campaign.

Sharing honors as the best overall campaign, the New York Urban Coalition's "Give A Damn" campaign also won the best public service campaign award.

mal award ceremonies in Philharmonic Hall, Lincoln Center to the best American TV commercials in 38 Product, 6 Special and 14 Technique categories, plus a special "Clio" to the Advertising Council, accepting behalf of the whole advertising industry, for its involvement with Public Service activities.

The winning commercials were selected from 1,974 entries in the domestic TV competition by a total of 406 advertising professionals on twelve panels in the U.S. and Canada. (The 406 total includes 80 judges in three European cities, who voted for the International entries for which "Clios" were awarded.)

David Ogilvy, the festival board chairman, welcomed the audience of advertising and production executives in Philharmonic Hall. Following an overture composed of recent commercial jingle "hits" and conducted by jazzman Don Elliott, co-Masters of Ceremonies, Anita Bryant and Bob Landers, presided over a program of award presentation and the screening of a selection of the winners. Alexander J. Cantwell staged the program which was written and produced by the festival director, Wallace A. Ross. A Gala Supper Dance on the several levels of Philharmonic Hall followed the ceremonies.

Top winners in the competition were the New York Urban Coalition's "Give A Damn" campaign created by Young & Rubican and Philip Morris Virginia Slims "You've Come a Long Way, Baby" campaign created by the Leo Burnett agency. They divided the *Best Overall Campaign* award—the one for commodity—the other public service.

Our story in a nutshell.

All the equipment you'll ever need is at Camera Mart.

Making movies is tough enough. Don't add to the problems by dealing with more than one equipment supplier. Camera Mart has everything any professional movie-maker could ask for.

We also have the technical know-how to help you on special projects. And faster, more efficient service. In short, getting the equipment you want — when and where you want it — will never again be a tough nut to crack.

commercials festival . . .

continued

Wisconsin Telephone Company's "Sexton" spot won both *Best Utilities* and *Best Regional* honors. It was created by Cramer-Krasselt Advertising of Milwaukee and produced by Sandler Films.

In a year loaded with political commercials, the winner was a commercial prepared for Governor Winthrop Rockefeller's campaign by Shelby Storek of St. Louis.

Other multiple winners included: the American Motors' Rebel "Driving School" commercial, created by Wells, Rich Greene, which won *Best Automobile*, *Best Use of Humor*, and *Best Direction* for its film director, Howard Zieff . . . also a Purina Canned Meats for Dogs commercial entitled "Park Bench", created by Gardner Advertising, St. Louis, which won *Best Pet Products* and also *Best Spokesman* for Pat Paulsen, who

appears in the spot . . . also Volvo's "Attack of the Car Dogs", created by Seali, McCabe, Sloves, New York, which won "Clios" for *Best Copywriting* (by Ed McCabe) and *Best Animation Design* (by Bob Blechman, executed by Pelican Films) . . . also Monsanto Wear Dated Fabrics' "Psychedelic" commercial, created by Doyle Dane Bernbach and executed by Gemini Films and The Optical House, New York, which won *Best Optical Effects* and the *Movielab Award For Best Film Editing*.

Three technique "Clios"

In addition to the Movielab award, three other Technique "Clios" were presented in the name of principal suppliers and service organizations. The *Eastman Kodak award for Best Cinematography* went to a public service commercial entitled "Starve A Rat Today" for the Urban America organization, created by Geer, DuBois Advertising, New York, and filmed by Bill Storz for Wylde Films. The NBC award for *Effective Use of Color by an Advertiser* (95% of all entries were in color) went to a Pepsi-Cola series ("Surf Football", "Rope Swing" and others) created by BBD&O, New York and filmed by B.F.B. Productions. The *3M Company award for Electography* — or Creative Use of Video Tape — went to a Chrysler commercial entitled "Fuselage", created by Young & Rubicam, Detroit, and produced by Advertel of Canada.

Top agency winners

Top winner among advertising agencies was Young & Rubicam with ten "Clios" BBD&O won five; Doyle Dane Bernbach, four; Foote, Cone & Belding and Leo Burnett, three apiece, as did Wells, Rich, Green. Multiple winners among production companies included: Horn/Griner (Steve Horn and Norm Griner) with five "Clios;" Pelican Films with three; Howard Zieff with four (three for the Rebel spot); VPI, Wylde, Sandler, Harold Becker, Paul Herriott, Advertel, Motion Associates, and Dick Miller, two apiece.

If you're in a bind for lab service, Reela can bail you out.

When deadlines loom large, and you keep running into one delay after another, call Reela. Nobody offers faster service. And nobody will give you better quality work.

Reela's speed and high quality come about because of three things:

1. Competent, dedicated people.
2. Jet transportation, and an outfit that knows how to exploit it.
3. Sophisticated new equipment.

How many release prints do you need — 20? 100? Reela can make them.

Perfect. Sharp. Color-balanced. Back in your hands (or drop-shipped if you want) before you know it.

Why settle for less than the best? Call Reela now.

REELA OFFERS:

- Complete editorial services
- complete producer's services — animation — titling — sound
- complete 8, 16, and 35mm laboratory services, including black and white or color dailies for Florida filming
- Super 8 printing and cartridging.

Two New Awards Highlight 1969 American Film Festival

"Ski the Outer Limits" wins first "Emily" — named in honor of Emily Jones, who is retiring from active festival participation.

TWO SPECIAL awards were created and presented this year during the American Film Festival of the Educational Film Library Association. The first, the EFLA award was presented to J. Raymond Bingham, retired president of Association Films. The citation read in part "... he set high standards of taste and of ethics in the competitive field of distribution, and has always worked vigorously for the causes of films."

In a special ceremony, EFLA Board President James Limbacher, presented retiring Executive Director Emily Jones with a testimonial scroll. Miss Jones then presented the first of a new annual award — the "Emily" — awarded to the film with the highest numerical rating of any film shown at the festival. The 1969 winner was *Ski the Outer Limits*, produced by Summit Films and distributed by Modern Talking Picture Service and Association Films. It was co-sponsored by Trans World Airlines and Hart Ski Co.

This year more than 1300 persons participated in the festival held in mid-May at the New York Hilton Hotel. The following are the 1969 Blue Ribbon Award winners in each category:

Agriculture, Forestry, Mining

Food For A Modern World, produced by Wexler Films and distributed by Dairy Council of California.

Citizenship, City Planning, Government

Little Man, Big City, produced by World Health Organization and distributed by Center for Mass Communication.

Classroom Films for Lower Grades

The Cow, produced by Dimension Films and distributed by Churchill Films.

Conservation

The Redwoods, produced by King Broadcasting and distributed by Sterling Educational Films.

Current Events, International Relations

Not Enough, produced by Bert Haanstra Filmproductie and distributed by Organisation for Economic Co-Operation & Development.

Economics, Business, Labor

Labor Relations: Do Not Fold, Spindle or Mutilate, produced by National Film Board of Canada and distributed by McGraw-Hill Text-Film Division.

Education & Teacher Training

The Invention of the Adolescent, produced by National Film Board of Canada and distributed by Heuk Newenhouse, Inc.

Anthropology & Archaeology

Desert People, produced by Australian News & Information Bureau and distributed by Comp-temp. Films McGraw-Hill.

Geography

Niko: Boy of Greece, produced and distributed by ACI films, Inc.

Guidance

Good Hand, Good Eye, produced by Gordon/Glyn Productions, Inc.

History & Biography

Robert Kennedy Remembered, produced and distributed by Guggenheim Productions, Inc.

Home Economics

Vitamins From Food, produced by Wexler Film Productions and distributed by Dairy Council of California.

Language Training, Communication

Oral Language — A Breakthrough to Reading, produced and distributed by Ohio State University, Dept. of Photography & Cinema.

Nature & Wildlife

It's A Strange World, produced and distributed by Reela Films.

Recreation, Hobbies, Crafts

Shades of Puffing Billy, produced and distributed by Australian News & Information Bureau.

Science — Elementary

How Life Begins, produced by Jules Power Int'l. Productions and distributed by McGraw-Hill.

Science — Secondary

Beginning of Life, produced by Lennart Nilsson and distributed by Benchmark Films, Inc.

Science — Adult

Birth of the Red Kangaroo, produced by Commonwealth Scientific & Industrial Research Organization and distributed by Int'l. Film Bureau, Inc.

Social Documentary — General

Flowers On A One-Way Street, produced by National Film Board of Canada and distributed by Films Incorporated.

Social Documentary — Intergroup Relations

Still A Brother: Inside The Negro Middle Class, distributed by Comp-temp. Films McGraw-Hill.

Sports & Physical Education

Ski The Outer Limits, produced by Summit Films, Inc. and distributed by Modern Talking Pictures.

Film as Art

Permutations Experiments In Motion Graphics, produced by John Whitney and distributed by Museum of Modern Art.

Graphic Arts — Artist at Work

Kalidoscope Orissa, produced by Pilgrim Films, Inc. and distributed by International Film Bureau, Inc.

Graphic Arts

Rhythm And Movement In Art, produced by Paul Burnford Productions and distributed by Film Associates.

Music and Dance

Paul Taylor & Company: An Artist And His Work, produced by Steeg Productions and distributed by Harris Communications, Inc.

Drama, Literature, Motion Picture History
The World of Carl Sandburg, produced Nathan Kroll and distributed by Comten Films/McGraw-Hill.

Stories for Children

The Thinking Book, produced by Bank Street College of Education and distributed by McGraw-Hill Text Films.

The Church at Work

These Four Cozy Walls, produced and distributed by Trafco, the United Methodist Church.

Doctrinal & Denominational Topics

Watts Made Out Of Thread, produced and distributed by Paulist Productions.

Ethical Problems

The Greater Community Animal, produced by Derek Phillips and distributed by ACI Film Inc.

Fund Raising

Kevin, produced by Motion Picture Dept. Syracuse University and distributed by Film Rental Library.

Industrial & Technical Processes

Incredible Machine, produced by Owen Murphy Productions and distributed by American Telephone & Telegraph.

A Way Out Of The Wilderness, produced by John Sutherland Productions and distributed by Division of Mental Retardation, Department of HEW.

Safety & First Aid

Be Safe . . . Be Seen, produced by Countryman-Klang, Inc. and distributed by 3M Company.

Smm—General Science

Recognition of Narcotic Withdrawal Symptoms in Newborn Infants, produced and distributed by Smith, Kline & French Laboratories.

Smm—Other Subjects

Paper Art, produced by Ikon Films and distributed by Bailey Films.

In addition, 12 filmstrips in eight categories were awarded blue ribbons for the excellence.

ARRIFLEX at work — ONE OF A SERIES

Mr. Gerald Hirschfeld, A.S.C.

The hand-held **ARRIFLEX® 35** gives a new freedom to filmed color TV commercials

Among the many pioneers of the new visual in color TV commercials, Gerald Hirschfeld, A.S.C., finds the hand-held camera, a responsive and creative tool.

Hirschfeld is Vice President and Director of Photography for MPO Videotronics, Inc.; his working day is occupied with shooting commercials for some of the nation's leading advertisers... soap, cigarettes, foods, automobiles... the works!

He experimented with videotape when this medium became practical, but found it limiting. Why? "... bulky, inflexible and extremely costly equipment; fairly rigid editing and limited effects possibilities," he reports. "The film story made with a hand-held camera in remote locations, with background effects added in the studio, and finally honed down to size by the hand of the skilled editor, offers far more versatile and creative results than can tape."

Hirschfeld looks on a TV commercial as a short film, whose purpose is to grip attention, persuade and sell. Adopting the techniques of the "new wave," he closes in, follows action, invests the scene with the conviction of life itself. With this kind of treatment, even a tripod is a cumbersome limitation, and is discarded. Hirschfeld hand holds the camera, moving swiftly and fluidly from face to face, from action to action, demanding—and getting—lifelike situations that come across the TV screen with convincing appeal.

Case in point: a shipboard commercial for Parliament cigarettes. The script called for a nighttime party scene. Hirschfeld took his crew, 30 quartz-iodine ColorTran lamps, two small generators, and one camera aboard an 85-foot yacht. "We wanted the realism of total mobility," Hirschfeld states. "Only one camera was used, but, since it was hand-held, we could move to whatever position was called for in the script. In fact, virtually no spot on the boat was inaccessible to us."

One camera. Which one? The Arriflex 35 2C.

Arriflex 35 2C—ideally suited to the growing need for a lightweight, compact, go-everywhere TV motion picture camera. Built around the famous Arri mirror-shutter reflex viewing system and the totally reliable, rock-steady film movement that has made Arriflex the cameraman's first choice for all kinds of filming assignments... delivering footage of the highest quality... giving the television cinematographer the same kind of fluid freedom, rapid set-up and low-cost operation his Arriflex-equipped colleagues in other fields have enjoyed for years.

In the hands of men like Gerald Hirschfeld, A.S.C., the Arriflex 35 2C helps to pioneer new pathways. In your hands, it may well do the same. Try Arriflex on your next assignment.

Woodside, N. Y. 11377 **ARRIFLEX**
CORPORATION OF AMERICA

Some of the Important Capabilities of Consolidated Film Industries

Eastman Color Processing

35mm and 16mm including release prints. Dailies and release printing.

Titles

Creative design—theatrical, TV, and non-theatrical.

PROGRAM

Marking its 30th year of service to the audiovisual industry, the 1969 convention promises to provide an outstanding program of events. Advance registrations are already running well ahead of last year's pace, when more than 5,300 dealers and users attended in Washington, D.C. For your convenience and advance planning, we have listed the program below, and a complete floor plan and guide to exhibitors on the following pages.

Thursday, July 17

- 12:00 p.m. NAVA Administrative Committee Meeting
- 1:00 p.m. NAVA Executive Committee Meeting
- 2:00 p.m. NAVA Membership Committee Meeting
- 3:00 p.m. NAVA Council Chairmen Breakfast Meeting

Friday, July 18

- 8:30 a.m. Sales Meetings
- 9:00 a.m. NAVA Board of Directors Meeting
- 10:00 a.m. Convention Registration
- 11:00 a.m. NAVA Resolutions Committee Meeting

Saturday, July 19

- 7:45 a.m. Breakfast and Entertainment: Gordon Barnes, Entertainment Chairman
- 8:45 a.m. First General Session: Ray Swank, presiding, Swank Motion Pictures, Inc., St. Louis, Mo. President's Address: John C. Ellingson, Inland Audio Visual Co., Spokane, Wash. Keynote Address: (to be announced) Address: "Selling, Designing and Installing A-V Systems," Boggs E. Huff, Allied Sound-Visual Education, Inc., Nashville, Tenn. Annual Business Meeting: Treasurers' Report Resolutions Committee Report 1969 National Institute for A-V Selling Report, A. L. La Com, Cathedral Films, Inc., Burbank, Calif.
- 9:00 a.m. Ladies' Program
- 9:45 a.m. NAVA Educational Materials Producers' Council Meeting
- 10:45 a.m. Sales Meetings
- 12:30 p.m. Press Conference
- 1:55 p.m. Ribbon-Cutting Ceremony
- 2:00 p.m. Grand Opening of Exhibits (Dealers Only)
- 2:30 p.m. A-V Systems Contractors' Council Meeting
- 3:30 p.m. NAVA Film Council Meeting
- 4:00 p.m. Sales Meetings
- 5:30 p.m. Annual NAVA Ball (formal dress optional) Ken Lilley, Hospitality Chairman

Sunday, July 20

- 8:00 a.m. NAVAC Board of Directors Meeting
- 8:30 a.m. NAVA Statistical Committee Meeting
- 8:30 a.m. Sales Meeting
- 9:30 a.m. NAVA Education Committee Meeting
- 11:00 a.m. Audio-Visual Worship Service (Concordia Films will direct)
- 12:00 noon Exhibits Open
- 12:30 p.m. NAVA Institute Board of Governors' Luncheon
- 2:00 p.m. NAVA Religious Council Board Meeting
- 3:00 p.m. NAVA Industry & Business Council Meeting
- 5:00 p.m. NAVAC General Meeting
- 6:00 p.m. Sales Meetings
- 7:30 p.m. NAVA Religious Council General Meeting

Monday, July 21

- 7:30 a.m. NAVA Western Dealers' Breakfast
- 8:00 a.m. NAVA Long Range Planning Meeting
- 8:30 a.m. Sales Meetings
- 8:30 a.m. NAVA A-V Equipment Manufacturers' Council Meeting
- 10:45 a.m. Exhibitors Meeting
- 10:45 a.m. Sales Meetings
- 10:45 a.m. NAVA Manufacturers' Representatives Meeting
- 11:30 a.m. Ladies' Program
- 12:00 noon Exhibits Open
- 12:00 noon NAVA Past Presidents' Luncheon
- 3:00 p.m. NAVA Technical Standards Committee Meeting
- 6:00 p.m. President's Reception (cash bar & hors d'oeuvres)
- 7:00 p.m. Sales Meetings

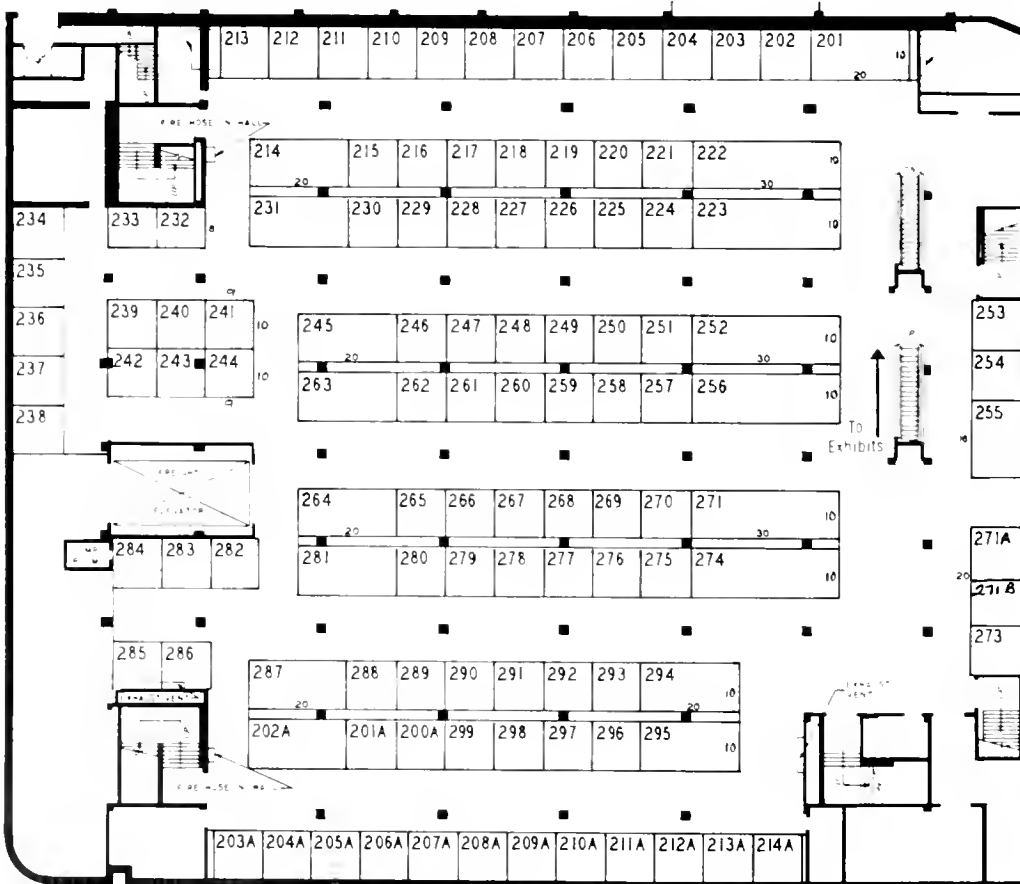

Tuesday, July 22

- 7:30 a.m. Breakfast and Entertainment: Gordon Barnes, Entertainment Chairman
- 8:30 a.m. Second General Session: P. Ray Swank, presiding Presentation of the new Officers and Directors of the Association Report on the Dealer Management Council and the 1970 Midwinter Conference in the Bahamas: Ray Swank, Swank Motion Pictures, Inc., St. Louis, Mo. Address: NAVA's Sales Management Training Program, Bill Jewett, Sales and Training Consultant, Creative Film Arts, Wichita, Kan. NAVA Legislative Report: Don White, NAVA Exhibits Open

CONTINENTAL ROOM First Floor

**you change the
NPR's magazine
in five seconds
and you don't
touch the film.**

Snap off the old magazine, check the aperture, snap on the new magazine. That's all. No threading; no loop to form; no blimp to climb in and out of. You don't need to touch the film at all. The film is threaded and the loop is formed inside the magazine when you load it, before shooting starts. The rear pressure-plate is on the magazine, the aperture is on the camera body. When you snap off the magazine, there's the aperture, right before your eyes. Couldn't be easier to clean.

With unscripted action that won't wait, you can leave the tape recorder running when you run out of film, and cover the lost five seconds with a cutaway later. The NPR's built-in clapper and sync-pulse will automatically re-establish sync. In the studio with a script, the five-second magazine change can prevent everyone on set going off to make a phone call when they hear the dread cry: "Reloading." With the NPR, it's just another take. Immediately.

The NPR's rotating two-lens turret, precise reflex viewing, light weight, registration-pin movement, balanced shoulder-resting and, of course, its blimp-free silence — they all make life easier, too. May we send you a free copy of our NPR brochure?

Eclair is at 7262 Melrose Avenue, Los Angeles 90046;
and at 18 West 56th Street, New York City 10019.

NINE-SCREEN PANORAMA SPUR

Changing a planned three-screen meeting presentation into a nine-screen opus in the midst of production is no easy task. Here's how Chapman/Spittler Productions did it and wowed Mutual of Omaha agents in the process at their annual meeting this spring in Las Vegas.

WHEN MUTUAL OF OMAHA said, "Come fly with me," to Chapman/Spittler Productions last fall, they weren't kidding. Not only was filming to take place all over the U.S. and in Puerto Rico, but Mutual also planned to put wings on one of the largest convention halls in Las Vegas—the colosseum at Caesar's Palace.

The idea was to turn the convention hall into an airplane. "Passengers" (Mutual salesmen and agents from throughout the country attending this annual meeting) would board through the doors of the hall, which would be transformed into the cabin interior of a jet airliner. From there, they would be transported (via film) to their destinations—home towns of top sales producers. The specially packaged tour "Jettogether '69" was planned as a three-screen, rear projection presentation of 7' x 10' screens.

Film production began in October, 1968. The three-man crew was headed by Bob Spittler with Bill Wiseman and Bernie Eichler. Two three week tours had the crew shooting in 14 states, Puerto Rico and the District of Columbia.

Several techniques were used in filming for the three screens. The basic format was an interview by either Bernie Eichler or Ed Laughlin, vice presidents of Mutual and

United, of the general agent or salesman. Questions and answers were timed, so additional footage could be shot of the other person reacting. In a Notre Dame locker room sequence, for example, Bernie Eichler would appear on the center screen, asking questions alternately of the two salesmen appearing on the outside screens. Each man would fade in, answer the question, then fade out as attention was directed to the other.

In other cases, extra scenic footage was shot to be used in sequences where salesmen talked about their territories. At the same time, the film crew shot different locales in boats, beaches, mountains, wineries and many other areas, simultaneously shooting 35mm slides which would be inserted in the program later.

Six weeks, 25,000 miles and 70,000 feet of film later, edited work prints and mag tracks were being prepared for printing, when Mutual announced that attendance totals for the meeting were dramatically higher than they had anticipated. As a result, the proportions of the meeting room were changed and the three 7' x 10' rear projection screens would not be enough.

It was decided to switch from rear to front projection. The rectangular shape of the room still precluded everyone being able to clear-

ly see all the screens at once. The final decision was to seat the audience in horizontal rows the length of the room with three screens in front of each half of the audience. The film segments would be projected simultaneously on both sets of screens. Three more screens were added in the center, and slight portions would use all nine screens, tying the presentation together.

The projection booth also ran the length of the hall, so the projectors' throw would be straight ahead. To project over the audience the 126' booth was built on scaffolding nine feet above the floor.

The biggest problem remained turning carefully planned three-screen show into nine-screen opus. Chapman/Spittler decided to try to maintain a separate speaker for each projector, keeping an alternative ready.

Slides, originally a secondary part of the program, took on a new importance. Not only was the need tripled, but more were now to be used in the program to take advantage of the multiple screens. Salesmen's wives, at their husbands' activities, were to be integrated in the show in slide form. More slides were shot in a quick tour. Techniques for implementation varied; in some cases, they were arranged on three screens, then tripled; others used nine views of a basic shot. In two weeks, an estimated 2,000 slides were produced.

Meanwhile, the equipment problem was being worked out. After considering several possibilities, Chapman/Spittler finally decided on 6 interlocked Bell & Howell J projector and nine Kodak Ektagraph Carousels converted for use with the Knei-

Nine 10 x 14 foot screens ran the length of one side of the room, and a projection booth 126 feet long built nine feet off the floor ran the opposite length.

INSURANCE AGENTS

One of the nine screen sequences of the program is shown across the top of the page. This one shows the importance of precise telephone message recording by a salesman's wife.

Xenon light source. The custom-built computer to control the program could make up to 42 simultaneous changes.

An inter-locked three camera rig flew to Colorado to film the opening—a jet take-off. Cockpit footage was shot at United Air Lines' Training Center in Denver . . . and the show is ready.

In Las Vegas, the colosseum at Caesar's Palace underwent a day-and-a-half transformation. The 126-foot projection booth etched the length of the room, nine feet wide on the floor on one side, facing nine screens on the other. The room was draped in blue. "Fasten Seat Belt" signs flashed in the corners.

The show was done in two parts, to be given Wednesday and Thursday mornings. On Wednesday morning, 1700 passengers entered and "Welcome to Jetogether '69" splashed across nine screens. Two stewardesses stepped from the podia in the center of the room and gave preliminary flight instruction. On "And away we go!" the houselights went black, and the plane slowly taxied across the runway, fading from screen to screen. Making its turn on the right screen, it faded back into the center screen, started to gather speed, and the film dissolved to a three-screen shot of the cockpit as the throttle was pushed forward. The plane began its take-off, and the outer two screens cut to the runway whizzing past. Just before the lift-off, the scenes reversed, then went to a three-screen panorama of the runway as the plane faded off to blue sky. There was a dissolve back to the cockpit, music began, and the audience viewed the pilots working the controls before the film dissolved back to blue sky. At this point, a nine-screen slide panorama of the Caesar's Palace entrance began to appear on the center screen and spread outwards to the audience. Titles came up—"Accent On Quality, The Pro"—"featuring"—and slides of insurance salesmen and women in the show rippled across the screens.

From there, insurance men and women spoke to the group from their home town settings. Some spoke from homes, cars or offices. Some gestured emphatically on three screens, and others faded from one screen to another. Some spoke straight to the audience, as footage depicting their thought processes framed them on eight sides. Others looked

from one screen to another as they answered questions from interviewers who faded in for a question and answer, then faded out to focus attention on the other interviewer.

Between the film slides danced, popped, jumped and slid across nine screens. Wives told how they try to give their husbands the best assistance, so he can do a better job.

The audience loved it. It wasn't just a spectacular show—it had real content for them. This is what a convention is for: to exchange ideas, to inspire, to help. And it was presented in a form bigger than life.

On Thursday morning, a second audience of approximately 1600 watched and applauded Mutual's version of in-flight movies. Marlin Perkins, host of Mutual of Omaha's "Wild Kingdom," said after seeing the show, "I like to see things used . . . and used properly. In my opinion, this was the best utilization of 16mm film and 35mm slides that I have ever seen. I was particularly impressed by the method of presentation in a room of this size."

Bob Paluzzi, convention manager of Caesar's Palace viewed the show and said, "It's the most complex show we've had here at Caesar's, or for that matter anywhere in Las Vegas. There's never been anything like it around here."

But perhaps one of the most rewarding observations came from a house electrician who watched run-throughs, rehearsals and performances with interest. He shook his head, "When you wow 'em in Vegas, that's really something!"

After a lengthy search for a three-headed Moviola, one with two sound heads and three 16mm film heads was shipped to Omaha for Film Editor Skip Engle to assemble the film program.

Interior shot of projection booth gives some idea of its 126 foot length. Six Jan projectors and nine Ektagraphic Carousels were used.

A Film Primer on the Rise of Industrial America

By JESSE SANDLER
Project 7 Productions

This trilogy on the industrialization of America could be just as beneficial to the rising young businessman as the teenage audience for which it was made. Here is a study of perhaps the most important years in American history without the usual stilted dialogue and superficialities.

Project 7 Productions had been commissioned by McGraw-Hill to produce a 20-part series dealing with American history. In the planning of the film entitled "The Makers of Industrial America" we faced an interesting dilemma. Today, in a period of great abundance, young people are growing up almost unaware that in the not-too-distant-past this country had no single real factory, that America was almost completely an agrarian society.

Digging into the existing film catalogues on the subject, we quickly discovered that no classroom films had been produced that told the story of the historical rise and formation of the American capitalist system, with all its successes and failures, virtues and evils.

We then suggested that a trilogy of films be made depicting the rise of America as an industrial power as a basic audio-visual primer for junior and high school students.

The series would encompass the period from 1776 through the early decades of this century. Because we felt young people in the late 1960's are more outspoken than ever before and demand uncompromising honesty on the part of their elders, we set out to make these films respond directly to this attitude. Yet, we believed this was not enough. Young people are charter members of the television generation and it is their group that keeps motion picture theatres filled. Anyone making movies directed at people who grow up teething on celluloid had better make those movies come alive with the kind of excitement and drama that can be seen on the TV tube seven nights a week.

Project 7's problem was that, in dealing with the early days of America's rise to economic power, the Arriflex camera had not yet been invented; and, unfortunately, there was nobody around to chronicle in film, for example, John D. Rockefeller's dramatic formation of the first trust.

But we knew that if we combined the truly fascinating history of American business with arresting visuals and a tell-it-like-it-was narration we could overcome what seemed to us a significant handicap. We believe the cardinal rule in tackling such a project is that history must be made to "play." Historical characters must be brought center stage and made real for the audience.

Project 7's answer was to dramatize the economic aspects of American history through the use of political cartoons of the period and historical prints; and to present these materials through animation techniques already largely developed by television series such as NBC's "Project 20," "CBS Reports" and

countless other video documentary "specials."

Originally the trilogy was shot in black and white. But, we decided something was missing. That something was color. Color in drawing rendered in black and white 75, 100, 200 years ago? It hadn't been done before. Project 7's art directors created a process that would translate black and white graphics into full color. Then, a full year was devoted to laboriously convert these historical visuals into full color. Each film contained more than 300 individual graphics, and each graphic was hand-painted in color styles which meticulously retained the flavor of the period—without being obtrusive. We felt to be completely successful, the viewer had to take the color for granted.

However, we concluded certain photographs, such as the Jacob Riis series depicting the poor living conditions among turn-of-the-century tenement dwellers, would lose their impact if they had undergone the four-color translation. These were only slightly tinted to retain a visual continuity.

The trilogy was actually produced as if it were a 90-minute documentary television special segmented into three parts, each relating to the other two. Part I, *America Becomes An Industrial Nation*, shows America, in a single century, growing from a nation of farms and villages to one of the leading industrial nations of the world. This rapid industrialization helped bring great wealth, power and a rising standard of living. But at the same time, industrialization brought new and serious social, economic and political problems.

Part II, *The Rise of the Industrial Giants*, is themed to America under the control of a powerful few. It is an era which sees the development of huge monopolies and the emergence of trusts. But, like an earlier era, rapid industrialization also brings new and serious social, economic and political problems which are still with us today.

Part III, *Trust & Trustbusters*, which was honored with a Chris Award for film achievement, depicts the era of the trusts when Morgan creates U.S. Steel, the "trust of trusts." But once the principle is established under Theodore Roosevelt that the government has the right to interfere, the nation sees the beginning of industrial reform.

As the *Makers of Industrial America* series begins to screen throughout the nation, it is quite possible that it will play a significant role in effectively educating young people about the fascinating and dramatic story of our American business heritage.

Industrial giants of the past like John D. Rockefeller are shown in old photos and paintings.

Old political cartoons provide the meaningful content of the films. Many of them were hand-painted to add color to films.

UNCLE SAM—Can't you leave me a few? OLD TRUSTY, THE HIGHWAYMAN—Nopes; my business rule is to let nothing get away.

LOOK AT YOUTH today . . . and they say:

"My goal is my religion!"

Famous men have said:

"Most men lead quiet lives of despair." Or

"Not only to be loved . . . but to be told that I am loved. For the realm of silence is great beyond the grave."

And in one of my own recent presentations:

"I've always had a great longing for loneliness . . . but conversely . . . the desire to bring the feeling of being oneself (that is — alone) to others."

What do all these statements have in common? Only one thing.

An individual must be successful in his *individual* behaviour in our new society . . .

for our institutions (as we have known them) are breaking down. No longer can the young rely totally on school, home and church. There's a great movement afoot in the world today that cries out for personal freedom and personal involvement.

So what are we as communicators going to say to this changing audience of the 70's . . . the workers of the 21st century? What are we going to do *now* as "representatives of experience!"

First of all, we must talk their language; and to do so would be to admit that "a mind is nothing more than the influence its environment has had over it." And our environment today is one where space and time (those two old stand-bys for basic indecision) are fast compressing. We find ourselves enmeshed in an accelerated decision making process in the field of communications, that has been brought about by the very communicative vehicles themselves.

I would like to give you some marvelous predictions on what motion picture film is going to do to help enrich the minds of the ultimate consumer . . . the brain of mankind. but I'm afraid that most of the blue sky predictions I've ever heard in my young life have either been (1) wrong or (2) irrelevant to my basic needs.

So I'm going to concentrate on several realistic trends that will be taking place in our film world of the seventies.

The two trends I speak of are (1) the introduction of the shorter, more compressed information module on film and (2) the influence American *private* enterprise is going to have on world-wide public "training" during the seventies.

The short film is nothing new. However, with the advent of television, the short film has been turned into one of the most powerful communicative tools of the 20th century . . . the television film commercial. I only wish that a greater portion of these TV commercial craftsmen could be turned loose on the needs of public training. But, unfortunately, it isn't in the cards right now.

We have seen the advent of the short, silent film loop in our instructional world, and have witnessed the introduction of hardware film distribution systems designed to accept the shorter film product.

" . . . we, as a people, in many cases can no longer afford the luxury of long, interrelating messages on film. . . . We must make our message available in the short form . . . and program them so that the receiver can pick out in advance what he wants to hear and see.

Short Films, Private Enterprise Keys to Public "Training"

By SAM GALE

Vice President-Sales
Capital Film Laboratories

We're entering a decade which will herald the introduction of the short film at an increasing rate on our commercial stations, educational TV networks, business community, communications requirements, public education curriculum programs and private and public individualized training programs.

The whole field of training in the American economy including such specialties as nurses training, police training, craft and service training is reaching a critical stage. We just don't have enough one-to-one teacher/student live relationships. We must tap the specialists in these fields (by the use of short films) and then distribute this program material in the least expensive way possible.

What I'm trying to say is simply this: Dur-

ing the 70's we, as a people, in many cases can no longer afford the luxury of long, interrelating messages on film. We just don't have the time to freeze our activities in order to find out for ourselves just what *part* of the long message is relevant to our own needs.

We must make our messages available in the short form . . . and program them so that the receiver can pick out in advance what he wants to hear and see.

Our accelerated pace of living during the next decade can stand no less.

During my last presentation before the American Management Association in New York, I spoke of the basic trend of American business becoming aware of their responsibilities in the field of public education, and I presented a method in which American industry can invest in the needs of tomorrow's youth at literally no cost to themselves.

Briefly, the idea is this: A catalyst (programmer or packager) researches a need where short film program units will materially benefit the curriculum area or training needs. He organizes the finest minds in America within the specific curriculum or training area, and develops a package of audio-visual and printed materials that will substantially fulfill the end users need. The cost for developing such a program is computed and the catalyst organization then enlists the economic power of American industry to finance the production of these materials. After production, the product is sold, and a percentage of sales is returned back to the industrial bank until he recovers his investment.

If the industrial bank wishes to make a profit . . . so be it. The economics of this plan boil down to three very simple truths:

1. The educator/training specialist is gaining complete top-notch programming material that is designed to fulfill an entire curriculum/training need . . . at lower cost than present distribution techniques.
2. The catalyst organization is making a profit on every phase of his operation including research, production and distribution.

Continued on next page

Sam Gale is vice president-sales of Capital Film Laboratories, Inc. He has been with Capital since 1963, where his duties include advertising, new business sales and sales promotion. Gale was instrumental in developing Capital's Miami subsidiary, and made the study which led to the firm's decision to enter the Super 8 market with facilities in Washington D.C.

short films . . .

continued

3. The industrial bank is contributing a portion of its profit dollars to the educational training needs of tomorrow's youth at no cost to themselves.

May I say quite frankly, that upon occasion I feel like a maverick prophet, crying in the wilderness. For this idea, as applied to the needs of our information market on a grand scale, is new. But I'm finding many encouraging signposts in the forest of criticism.

Every corporate executive responsible for new business investment that I've had the pleasure of speaking with supports the basic thesis. Educators in the Office of Education, The National Education Association and other official bodies in our body-politic endorse the concept.

What we're doing here is enlisting the support of private capital . . . and in some cases, government . . . to meet the vast and somewhat staggering educational/training requirements of the next decade and the 21st century.

But more importantly, enlisting it to provide material that is not a reflection of our past efforts (in many cases, dull instructional material) but a reflection of our modern, changing, visually dynamic environment. We're proposing the provision of "edutainment" packages . . . made to stimulate discussion, present alternatives, and open a student's mind to the realities of "his" world. Not what we think his world should be!

Summary

These two trends, that is the increasing requirement for short information packed films in our society, and the increasing awareness on the part of the American business community regarding their responsibility in providing a bridge of "knowledge continuity" to succeeding western society oriented generations, are . . . in my opinion very closely intertwined.

The time has arrived when we must reinvest in ourselves . . . must renew our faith in our abilities . . . and make a commitment! I'm tired of seeing men gobbled up by the institution of life . . . cowered by corporate and governmental tradition and law! Relegated to recognizable obscurity by the very institutions they wish to serve!

There's a current song "Life Is What You Do While You're Waiting To Die". It can also be said that you're born, you live and you die. You have nothing to do about the former or the latter, but an awful lot to do about the in-between.

So we as communicators in our changing film world of the seventies, should set our sails for the possible: The production of socially relevant short film product to meet the needs of American business and educational enrichment. To do so would be to cultivate "a something" out of the present ugliness of our time.

Portable Exhibits Encourage Dealer Show Participation

ENCOURAGING a nationwide dealer network to actively participate in local exhibits and conventions is a problem faced by many companies.

And, in the audiovisual industry where there are hundreds of local, state and regional education and trade shows vying for a dealer's time and manpower, the problem is acute.

To overcome this problem, the Audio-Visual Products Division of Bell & Howell Company decided to make available eight travelling exhibits (one for each of its sales regions). Exhibits can be set up by one man in minutes, and provide a professional looking exhibit that replaces the ordinary green-draped folding table as the usual focal point of the dealer's booth.

Not to be overlooked are the savings in design, labor and material costs to the user since exhibits are loaned free of charge to Bell & Howell Audio-Visual dealers.

The travelling exhibits, which weigh 90 lbs. in shipping carton, are constructed of a sturdy, reinforced fibreboard that sets up into an 8 ft. high by 10 ft. wide display. The display contains recessed lighting, two built-in pedestals and four adjustable shelves of sufficient size to accommodate a variety of whatever products a dealer desires.

Handling the exhibits is easy. All arrangements to ship a unit to a particular dealer, including transportation charges, are handled through Bell & Howell's AV Division office in Chicago. After its use, the dealer either forwards the exhibit to the next user or returns it to Chicago where it is inspected.

No limit is placed on the number of times a dealer may use an exhibit; however, reservations are handled on a first-come, first-served basis per region.

One Bell & Howell dealer, Van's Audio-Visual in Lansing, Michigan, has already used an exhibit twice. Fred Adams, manager of its A-V department, says that the convenience of the exhibit is important. In addition, ". . . it gave our booth a very professional look; to the point that several visitors commented on the booth's excellent appearance."

In use now for close to five months, the exhibits have received a very favorable response, with each regional manager reporting that nearly all dealers have requested at least one booking for 1969. Some dealers, however, have made up to five reservations for the year. In fact, the Division reports the dealer participation in local and regional conventions is now running 50 per cent ahead of last year.

Pedestals built into the portable exhibit are ideal for showing larger pieces of equipment. Ray Thompson, partner in Thompson Movie Supply demonstrates the folding arms feature of a projector.

A Symposium . . .

As part of its annual "A-V Equipment Buyer's Guide" issue BUSINESS SCREEN asked several projection equipment manufacturers to give us their thoughts and views about equipment today and their ideas about what we might expect tomorrow. Here, then, are the comments of three men representing three different equipment manufacturers about the trends, needs and capabilities of presentation equipment as it is and as it might be.

A-V Equipment . . . Today and Tomorrow

The Size Goes Down As the Interaction Goes Up

By **M. R. ABRAMS**
Vice President
Viewlex, Inc.

FOR THE MOST PART, the future in audio-visual equipment is clearly indicated by today's hard trends. There is, however, a new concept which is not yet a trend, but is likely to move in that direction. This is the man/machine interaction concept.

In sales presentations, personnel training, and the like, the sight & sound lecture-by-machine has the inherent limitation of non-interaction. Audio-visual equipment will take this into account with machinery that allows for interaction between the prospect, trainee, or user, thereby generating the many benefits of personal involvement.

The interaction concept as applied to audio-visual equipment will not necessitate the use of elaborate, even expensive equipment. In fact, the clearly defined trend toward compactness is as much a factor here as it is in new and on-the-drawing-board A-V gear of "conventional" capability. The first of the interaction equipment is already on the market, and its size, especially in view of its enormous capabilities, is surprisingly diminutive. It is, in fact, smaller than most of the A-V equipment available just a few years ago.

The interaction-concept notwithstanding, there are other clear indicators that tell us what to expect in the near future in audio-visual hardware.

Important to everyone, manufacturer and user, is the steady and steadily increasing market for all categories of audio-visual equipment. The size of the market itself, and the keen competitiveness within that market will generate a steady flow of new ideas in equipment and media.

Obviously gaining in importance is the sight & sound equipment category. The silent projector, especially in view of the also increasing trend toward user production and custom production of sight & sound packages, simply does not provide the communicative impact of sight with sound.

Simultaneously, the development of various

new sight & sound formats has and will eliminate most if not all of the operator problems. The drop-in cartridge, the plastic-encased LP recording/filmstrip unit, and other "new media," make operation of sight and sound equipment close to foolproof.

And with all of this, things are getting smaller. Advances in film-making and photochemistry have allowed us to obtain high quality images, black & white and color, with formats such as 8mm that were never even considered in the past for quality results. At the same time, sound engineers have been able to pull good fidelity out of tapes running at previously unheard-of speeds. Put these two factors together and we have much more audio and visual information in much less space, yet quality has held up or improved.

Consequently, with the smaller sight and sound packages, associated hardware also becomes smaller by a healthy margin. Add to this the newest advances in micro-electronics, more efficient optical systems, and lighter more durable materials to put it all into, and you've got very small equipment producing very big sight and sound.

Yet, 16mm and 35mm is still an important factor, and will continue to be so at least into the near future.

O.K., so we've made and are continuing to make advances in size reduction. It would be logical to expect that something would have to give way in equipment sophistication, or at least in operational simplicity or automation. Clearly, the reverse is true, as evidenced by the abundance of plug-in-and-go equipment. And, as mentioned earlier, one of the smallest of the new-generation of A-V equipment allows the user to interact with the sight and sound program!

This interaction factor, incidentally, is expected to find its way into a lot more A-V equipment. In personnel training, what could be more ideal than an audio-visual device

Continued on next page

The Size Goes Down...

continued

that stops to ask questions; won't proceed until the correct answer is given; keeps score of the responses; and operates in a choice of other automatic and semi-automatic modes, yet costs very little, is user operable, and extremely small? Put the same concept to work in sales presentations and the classic advantage of prospect involvement in the sales presentation takes place. Yet the machine that accomplishes this is easily carried by the

salesman, along with an endless supply of programs.

What could be more ideal than all of this? Easy: a machine that does at least all of the above yet costs even less, occupies no more space than a deck of cards, and whose full-length audio-visual programs occupy the space of one of the cards in the deck.

Is this type of thing coming? You can be assured that you will one day be using it.

By NAT C. MYERS, JR.
Fairchild Camera and
Instrument Corporation

The Years 8mm Cartridge Sound Film Came of Age

SOME FEW YEARS hence it will be said that "in 1969-1970 8mm cartridge sound film came of age — that it achieved standardization of film format and a major degree of cartridge compatibility" — and that "it thus overcame the major roadblocks to volume growth."

Explosive expansion of the 8mm cartridge sound film market will follow the introduction of equipment systems utilizing identical standardized film format (super 8mm, magnetic sound, 18 frame sound to image separation) and format compatible cartridges (ie, Eastman Kodak cassette-type family of cartridges, Fairchild Series 70 loop type cartridges).

Light weight, high light intensity, rear and front screen systems supported by improved laboratory facilities and by expanded pre-stripped film raw stock supplies will be produced and distributed in quantity at low unit price levels.

Programming models (sound motion picture plus film strip capability) requiring specialized software and television display models

feeding television sets (instead of film image display) will see wide utilization.

Availability of thin based pre-stripped film stocks and high quantity, high quality film processing equipment systems, will lead to drastic reduction in release print manufacturing costs. Increased print distribution to a wider equipment market will result in a restructuring of the pricing formulas for motion picture film distribution. Improvements and inventions in electronic circuitry and components will bring about a marriage of film and electronics and result in improved reliability, lower cost, and wider distribution of cartridge 8mm sound film projection systems.

With increased availability and utilization there will be a blurring between the lines of what now appear to be different markets — markets which are in truth the same market segmented by price considerations.

Within three years unit sales of 8mm cartridge sound projectors will exceed unit sales of 16mm sound projectors. In addition to utilization as a specialized aid for display, personal sales and individual instruction, 8mm sound cartridge film systems designed for high light intensity will service most training department, classroom, and small auditorium applications.

With the lowering of price levels for hardware and software, 8mm cartridge sound film will become price competitive with sound film strip. The past few years have seen increasing sales of sound film strip against decreasing sales of silent film strip. Within the next five years low priced 8mm sound film systems will encroach upon and then replace film strip systems in industrial, government, medical and educational use.

In other words, "the sky is the limit."

A Great Need for Versatile Equipment, New Concepts

By B. Y. AUGER
General Manager
3M Company
Visual Products Div.

THE INFORMATION EXPLOSION is having its effect on the audio-visual equipment industry.

Obviously, information is useless unless it is effectively communicated. And it is becoming apparent to more and more people that audiovisual devices are almost essential to communicate more pertinent information more effectively.

The demand for audiovisual equipment in the nation's schools is growing at a rapid rate. And, in business and industry, training directors are increasingly turning to A-V tools in order to upgrade their training programs.

But this rapidly changing situation poses

a serious challenge to equipment manufacturers: There is a great need for more versatile, more flexible equipment. In response, industry can be expected to come up with significant new concepts, in addition to further improving existing models.

Two examples of such new concepts (to restrict myself to the products I know best) are 3M's Sound-on-Slide System and its transparency-cartridge projector.

The Sound-on-Slide System is a revision-oriented projector-recorder-playback device. It makes possible rapid, easy, inexpensive changes in picture, sound track or both — previously impossible in a synchronized picture-and-sound presentation.

The heart of the system is a plastic slide holder which has a detachable magnetic sound track around the slide. Since the sound is on the slide holder, both picture and sound

can be changed by merely removing or adding a holder; or the sound alone can be changed by re-recording it on the slide holder or by inserting another detachable sound track; or the picture alone can be changed by inserting another film.

This machine is free from the inherent awkwardness of the conventional slide projector-tape recorder combination with all its problems of editing, splicing, and the time required to make revisions.

The transparency-cartridge projector, a multi-media device, is a most versatile projector. Utilizing snap-together 3 1/4" x 4" frames which form a self-contained cartridge, the projector permits inter-mixing of various sized slides, color transparencies and other visual materials. It can be operated by remote control in daylight or darkness.

Thus, by possessing the advantages of several different slide projection systems in one unit, this projector represents a new concept in design and provides a new potential for communications.

And this is what we need — a new potential for communications. This will be the demand of the future, and I am confident manufacturers will meet the challenge.

Locally Produced Film Helps United Fund Top Goals

By localizing campaign films, the Jacksonville United Fund has gained added emotional impact and reached its annual goal nearly every year since beginning the use of local films.

WHEN THE UNITED FUND of the Jacksonville Area, Inc., surpassed its fund-raising goal in less than a month during the 1967-68 campaign, never had so many even so much in so short a time.

"We captured Jacksonville on film and brought it to the people," explained Richard Covey, the United Fund's executive director. As a result, the drive raised \$1,863,232, or 13 percent above the goal, before the October 31 deadline.

To personalize its story, the United Fund locally produced a 20-minute color film of actual case studies taken from the files of several agencies. "We feel it is more personal if you show actual agencies and local case studies," Covey stated. "There is more of an emotional impact if people see something they recognize," he added.

Films always have been an important part of United Fund campaigns. "For years, we showed the films from the national organization, but they contained no reference to Jacksonville and, therefore, did not mean as much to people who live here," Covey contended. For example, in 1961, before the first locally produced film was shown, the campaign brought in only 90 percent of the goal. But, in each of the four years prior to the 1967-68 drive, the returns ranged from over 90 to 101 percent of the goal.

While the use of a locally produced film is not without problems or expense, its purse-closing effect is undeniable. Over the years, it has been the highlight of most solicitations. "When you bring people together, the film is a necessary part of the program," Covey said, "because it is more important for them to see where their money goes and how it is used than have someone talk about it."

The first evidence of this occurred one year when color slides were included in a program and were well received. Then Donald E. Barton, president, Barton Film Company, Jacksonville, sold the United Fund's public relations division on the idea of using locally produced film.

Barton's company was the logical choice. Jacksonville based, the firm has a feel for local conditions. At the same time, Barton has considerable experience in making industrial films and television spots.

Five films have been made in the past seven years. Before each campaign, Barton, the executive director, and the general drive chairman meet to discuss objectives and the year's United Fund theme and how to portray it.

The 1967-68 campaign slogan was: "If

you think Jacksonville can take care of its own, prove it." Laying down the challenge, the 20-minute film re-enacted case histories from the files of several United Fund agencies.

In one portrayal, the Red Cross was shown taking care of three children whose mother, the wife of a Navy man in Viet Nam, was hospitalized for surgery. The Red Cross also arranged for an emergency leave for the sailor.

Another sequence had a mother describe what it's like to have a five-year-old child with cerebral palsy. As the mother spoke, the film showed the child being treated at the cerebral palsy clinic.

In still another scene, a distraught mother calls the Family Consultation Service for assistance.

Depending on the script, a new color production, shot with Eastman Ektachrome Commercial Film 7255 or Kodak Ektachrome EF Film 7242, can be made for \$500 to \$600 per minute. A 12-minute film, then, would cost about \$7,200. If past experience is any indication, the use of the film is worth an additional \$100,000 in solicitations.

"The content of our films is emotionally oriented," Barton explained. "We appeal to the emotions and follow it up immediately with pledge cards," he added.

In recent years, the drive format has varied very little. The film has been previewed at kickoff luncheons by volunteers who work under the supervision of nine division heads. The job of the volunteers is to contact the business and professional community asking

Continued on page 42

United Fund solicitor checks map to locate site of his next meeting.

Prints of the film are kept at the UF headquarters along with projection equipment.

Noting a scene during the editing, Don Barton checks script with film editor.

Jacksonville UF officials discuss plans for proposed film. From left are: Donald Barton, Paisley Boney, III, campaign chairman, and Richard Covey, executive director of the United Fund.

locally produced films . . .

continued

for contributions and for permission to solicit employees at scheduled meetings.

When an appointment is made, the volunteer telephones the United Fund office to book the film. Every year, the naval base in Jacksonville assigns seamen to work in the campaign as motion picture projectionists. The men are given operating instructions and are equipped with 16mm projectors, a screen, and a print of the film.

Each day the sailors check with the office for their schedules. At the appointed times, the projectionists and volunteer workers meet at the site of the solicitation, which may be an office building, plant, or union hall. In most cases, the business community is extremely cooperative, setting aside a meeting hall and permitting the session on company time.

Though the group's approach in recent

years has proven successful, the United Fund has altered the formula somewhat for the 1968-69 campaign, which has an all-time high goal of \$2 million.

It was discovered that nearly 50 percent of the 207,000 persons employed in Jacksonville and Duval, as well as portions of St. John's and Clay Counties, the areas covered by the 46 social services supported by United Fund money, were making contributions. "We wanted to reach the rest of the people," explained Paisley Boney, III, the campaign chairman.

It also was thought that a 20-minute film might be too long—a factor in some meetings running upwards of an hour—for reaching the broadest group.

So, rather than shoot an entirely new production, it was decided to shorten the 1967-68 film to 10 minutes, update at least

one case history, and rewrite portions of script so that the presentation could be coordinated with the new slogan, "The new city is you." The theme refers to Jacksonville's new consolidated city-county government that will make the city, at 8 square miles, the largest in the free world.

This year, the film preview at the kick luncheon was discontinued and, in its place, the four local television stations agreed to show the production as part of 30-minute telecasts beginning at 7 p.m. on September 30. Each station did a different type of United Fund show during the half hour, but all telecast the 10-minute film.

Since the film was shot and printed in 16mm format, its adaptation for television routine. Thus, a single film intended primarily for showing at meetings has a multipurpose function without added expense or effort.

Although the film will mostly be a repeat of the previous year's production, no lack of enthusiasm is anticipated in its reception. Barton put it, "This is a changing, growing county with new faces arriving all the time."

Naval Command—A Varied, Awesome Task

"... in the Navy, far at sea, you have a Captain who must be all of these things."

Making decisions is the order of the day for the Captain of the frigate, USS King.

Change of command ceremony provides one of the more colorful sequences in the film.

First in Command, produced for the United States Navy, is a half-hour show with built-in audience appeal. Every American, every parent, wife, child, friend of any serviceman will have special interest in this new dramatic documentary.

For here is a picture which faithfully portrays the many responsibilities of a man who commands — the kind of man who might, in fact, command one of the audience's own.

The stage for this drama-documentary is the guided missile frigate, USS King, one of the Navy's most modern fighting ships. For the ship's captain, making decisions is the order of the day. From the moment he takes command he has to reach a decision on a wide variety of problems ranging from an impending storm to a crewman's appendicitis.

As narrator Richard Boone comments in the film, "Most of us have someone to turn to when we have a problem — a doctor, a friend, or a boss. But in the Navy, far at sea, you have a captain who must be all of these things. . . . His is the responsibility to take this ship and its crew of four hundred men in harm's way, if necessary, to risk it and all on board. In this responsibility, he stands uniquely alone."

Specially designed equipment enabled the producer of this film, Cascade, California, to overcome problems of photography and live sound recording in the close

quarters aboard ship. The use of light-weight microphones and specially designed sound recording systems, has resulted in a film that is faithfully recorded. Helicopter views photographed live for this film add a spark of realism to underway scenes.

Following the King's captain from the moment he takes charge of his ship at a colorful change of command ceremony, Director Tom Dunphy and Producer George Seitz skillfully bring to the screen every dramatic moment in the captain's life aboard ship.

First in Command details the more dramatic happenings of shipboard life. . . .

At the Captain's Mast, prevailing over a trial at sea . . . the Captain is both Judge and jury.

In the wardroom, the center of the ship's activity, the Captain, like board-chairman, company president, officiate over his executive officers. For the safety of his ship he must know their strengths and learn their weaknesses.

Whether it be in the sophisticated weapons control center on the bridge during general quarters, the captain is the overall leader . . . a "Generalist" in this age of specialists.

First in Command presents a vivid picture of the day to day, occasionally awesome, responsibilities of a Navy captain, and is a highly authentic documentation of the modern Navy.

IFPA Has Bright New Display

"IFPA is looking to the Northwest," says Bob Montague, Chapters Vice President — best, who, burdened under packing cases, stopped in Los Angeles long enough to change planes and attend a meeting of the IFPA National Board of Directors.

Montague, enroute to the Seattle Center for the Second Annual Motion Picture Seminar of the Northwest was not content with telling the IFPA story to an audience of more than 1500 persons. Having obtained complimentary booth space for IFPA, Montague decided the realization that membership blanks and back issues of the IFPA Newsletters do not a display unit make!

It took talented Convair colleagues, the family patio, and two weekends. Today, thanks to Bob Montague, IFPA is the proud possessor of a contemporary functional display

unit housed in a carrying case . . . complete with skids!

With design assistance from the Convair crew — not to mention a slightly depleted paint locker — the unit, a modular device built with accordion hinged panels, supported on dowels, may be displayed in varying positions so it conforms to the best utilization of floor space and traffic.

Colorful panels graphically tell the IFPA story: membership, IFPA objectives and activities, the awards stories including Cindy, the J. E. Gordon Memorial and the Eugene Keefer awards. Other panels list organizations represented by the membership and a salute to our good sustaining members.

Montague, not easily stopped when it comes to IFPA, reports the display has been built so additional panels may be added as needed — and word of rear screen projection is being heard.

Discussing the formation of the new Seattle chapter in front of the new IFPA display are (l. to r.): Dick Shallow, a new member; Bob Montague, vice president, chapters; and Dick Cameron, acting chairman of the Seattle group.

Joint Seminar A Success

The ballots are in and counted and 200 San Franciscans concur that the IFPA-SMPTE Seminar was a smash success! Gathering in the Miyako Hotel at the Japanese Trade Center, members and their guests gave attention to the use of the 8mm format in business and industry. They also participated in panel and group discussions to examine 8mm formats, laboratory and production techniques and super 8mm potential, problems and growing pains.

Program participants included Leo Diner of the film company that bears his name and

is credited with many innovations in production and laboratory techniques; Raymond F. Grant, who for twenty of his thirty years with Eastman Kodak has been in daily contact with motion picture and television professionals through the county; Dr. Jerrold Kemp, professor of Education and coordinator of audio-visual production services at San Jose State College; William A. Palmer, president of W. A. Palmer Films a nationally recognized authority on film recording and duplication.

Other notable participants included Burton Smith, president of Cine-Chrome Laboratories; William J. Wagner, creative-Wells Fargo Training Department; and Jack Whalen, western sales manager for Modern Talking Picture Service.

Manufacturers' demonstrating new equipment during the seminar included Bohn-Benton, Eastman Kodak, MPO, Honeywell, Jayark, W. A. Palmer and Technicolor.

Congratulations to John Hynd

A special hurrah to IFPA member John Hynd, film editor for *Journey Into Self*, an Oscar winner for best achievement in documentary production. Produced for Western Behavioral Sciences Institute the film does not utilize prepared script or rehearsed professionals. Rather, it is an actual group encounter — lay persons who encounter each other for the first time, and who, after hours of conversational exchange find that in learning to know others they have obtained a great knowledge of themselves — truly, a journey into self.

Hynd relates that even editing the film produced a tremendous emotional impact upon him, and because of the nature of the film, as well as other commitments, the editing was in work "off and on" for almost a year. Originally, 16 hours of video tape, Hynd edited the Oscar winner down to 47 minutes.

Impressive Conference Program Taking Shape for October

Cheers too, to IFPA Conference Program Chairman, Wilbur T. Blume, for what sounds like an Oscar winning program for IFPA's Tenth Annual Conference, October 16, 17, 18, 1969 at the Sheraton Palace Hotel in San Francisco.

From formal talks to shirt sleeve sessions,

Outlining part of the 1969 Conference schedule, Bill and Mrs. Blume address the recent Board of Governors meeting.

IFPA members will be updated, informed and enthused! Grouped into three major areas of interest, technology — methods — concepts, we will learn more about the Apollo moon mission and films in exploration; integrated systems approach and information retrieval; the management of information and an up front rating of the visual literacy of our new audience.

In keeping with the theme, "The Shape of Things to Come", IFPA will preview the future of the international film market, areas of special interest to non-theatrical film makers, information relating to international positions.

Lest you believe it's all work and no play, program chairman Blume, who is chief of the motion picture production division, Headquarters, Aerospace Audio-Visual Service USAF, promises a late afternoon wine tasting party and a night on the town. San Francisco — What a town!

Washington Goes to Greensboro

Members of the Washington Chapter of IFPA journeyed to Greensboro, North Carolina for their June meeting for the express purpose of combining a little business with a lot of pleasure. IFPA member, ART Salkin persuaded his boss and the president of Ardeman Studios, to host a banquet and golf outing.

Arrangements were also made for the distaff members and non golfers to visit various furniture factories, a principal industry in that part of North Carolina. A fine turnout and a most congenial social atmosphere combined to make it a most successful meeting.

Disney Studios Hosts LA Chapter

Disney Studios hosted IFPA Los Angeles Chapter May meeting for a technical session on special effects held in the studio theatre with a record attendance of 450 members and industry guests.

Principal speaker was Eustace Lycett, Disney department head, special photographic techniques, who covered all special effects work at the studio, with emphasis on the film process screen.

Lycett, who garnered an Academy Award for *Mary Poppins* screened clips from *The Sandlot*, *Gnomobile* and *Poppins*, as well as demonstration clips of various photographic techniques.

The technical session was attended also by Disney Studios staffers, members of the Hollywood Radio and Television Society and the Los Angeles Press Club.

Surprise of the evening was Jerry Oliver's TV-produced "Mission Impossible" take-bidding farewell to newly-drafted Chapter Treasurer Ray Engel who joined the U. S. on June 1.

Speakers at Los Angeles IFPA's May meeting at Walt Disney Productions: (L to R) Chapter Chairman Mike Rye; Eustace Lycett, Disney Studios department head, special photographic techniques; IFPA Program Chairman Jack Meakin.

What's New? IFPA in Motion

Many changes have occurred recently so we've listed them and were surprised at how many new things *have* happened to us.

To start off, there's the new name without the loss of our familiar initials. With this are the new officers and candidates who are able to devote their time and themselves to a greater IFPA. A full time professional Executive Director and staff to manage business affairs. A new system of membership dues; still annual, but effective and renewable at the nearest quarter. New conference format, better speakers, more workshops, and family activities. New chapters will bring IFPA to film centers across the nation. A self-sustaining newsletter keeps members informed. The programs are new, and outstanding ones are "roadshowed" to other chapters. Cindy Award categories have been expanded and grounded for fair competition. Our image is new: a dynamic organization in motion. Continuity, guidance, and stability have been added with the formation of the Board of Governors, composed of past presidents, current chapter chairmen, and distinguished professions. The new Constitution and Bylaws will be proposed at the next conference in San Francisco.

The p.a. system that shows pictures.

Bauer's P6 automatic is a compact 16mm auto-threading sound projector, of course. You can see that.

What you *can't* see is its remarkable 15-watt transistorized amplifier. But you can *hear* its effect. Clearly, cleanly, and (with optional 20W speaker) in most large size auditoriums, whether you use films with optical or magnetic tracks. Because this rugged, handsome projector takes either and transforms them into high-fidelity sound.

The P6 automatic also has magnetic recording capability (including sound on sound, so you can add your own comments over music you record on the track); mike, record player and tape recorder inputs; built-in 3W speaker; and separate volume, bass and treble controls.

Of course, this "p.a. system" is also a brilliant projector, with optional 4000' capacity and 2-speed film drive, forward or reverse. Bauer also makes the P6 automatic with a Marc-300" metal-arc lamp that puts out more than *four times* the light of conventional projector lamps. *That* you must see to believe.

See your dealer or write to: Allied Impex Corp., 168 Glen Cove Rd., Carle Place, L.I., N.Y. 11514. Chicago; Dallas and Glendale, Calif.

America at Retail, A Lesson In Point-of-Purchasing

America at Retail, a 20-minute film on point-of-purchase merchandising has been produced for the Point-of-Purchase Advertising Institute, Inc. by Victor Kayfetz Productions.

The film is aimed specifically at executives of consumer marketing corporations and approaches point-of-purchase from the standpoints of the consumer, the retailer and top management and demonstrates the effectiveness of the P-O-P medium in closing sales at retail, especially when used as part of a coordinated advertising/promotion campaign.

To be made available for general distribution later in the year, but for more information write POPAI Headquarters, 521 Fifth Avenue, New York.

1968 World Series Thrills Captured By Coca-Cola Film

Baseball fans now have an opportunity to re-live the seven-game 1968 World Series between the Detroit Tigers and the St. Louis Cardinals. All the action is captured in a 40-minute, sound-color film available from Coca-Cola Bottlers.

Lifewatch 6 Cancer Series Has Writers as Actors

Writers as actors? The Directors Group Inc. thought it would work and set about proving it in producing an impressive new series of films for the U. S. Public Health Service about early detection and treatment of cancer.

The series, titled *Lifewatch 6*, represents a new approach by government to public service films and are slated for distribution through Sterling Movies to TV stations throughout the U. S.

The films will star Rod Serling, Neil Simon, James Michener, Jaqueline Susann, Ossie Davis and Irving Stone. The series was recently kicked off with the premiere of the first completed film *Lucky Joe* starring Rod Serling. The other five films in the series are scheduled for completion yet this year.

Executive Producer Walter King said he decided to ask well known writers to star in the films "because of the insights they could make into the characterizations and for their name value."

None of them wrote any of the scripts, although several helped with suggestions and James Michener provided the

story idea for the film he starred in.

The series aim is to entertain while informing, and according to King, "in each case the message grows out of human, dramatic situations."

The other films in the series include:

Waiting Game starring James Michener as a critic in the stor

Modern Distributing Film "Not Enough"

The documentary film *Not
Enough* is now being distributed
in the U. S. by Modern Learn-
ing Aids, New York City.

A review of the 30-minute
technicolor film is on page 50
in issue #3, Volume 29 of BUSI-
NESS SCREEN.

Paint, The Full Story From The Very Beginning

One of man's most durable
and useful discoveries is traced
through its long and complex his-
tory by Shell Oil's new 25-min-
ute movie titled *Paint*.

Paint is an informative and
easily understood introduction to
the subject for youngsters as well
as a sophisticated and authorita-
tive film for those already well
versed in art and paint technol-
ogy.

Available from the Shell Film
Library at 450 North Meridian
Street, Indianapolis, Indiana.

Gulf, Eastman Kodak Film; A New Look at Niagara Falls

Niagara Frontier, a new 20-
minute color film co-sponsored
by Gulf Oil Corporation and
Eastman Kodak Company and
produced by Eastman, features
the falls and the swift running wa-
ters of the Niagara River in sev-
eral exciting scenes. It touches
on the geological phenomena and
rapidly recounts historical high-
lights from its discovery by In-
dians to the successful dare-devil
trip over the falls in a barrel by
"Red" Hill. It then moves gaily
through the romantic, the sight-
seeing and the recreational as-
pects of the perennially popular
tourist attraction.

Water's Role in Punjab Dramatized--"Indus Waters"

Indus Waters reports on an area whose history has been written largely in terms of water — the heavily populated Indian and Pakistani territories once known as the Punjab.

The physical relationship between India and Pakistan is illustrated along with the problems of seasonal water, water logging and salinity that affect vast areas of irrigated land in many parts of the world.

The 25-minute color film was produced by Interfilm Ltd. and is available from Modern Learning Aids, New York.

The Emerging Role of Industry in Rural Areas

A new motion picture about the land, the people who live on the land, and the emerging role of industry on the rural scene was released recently by Jones & Laughlin Steel Corporation.

In the film *Symbiosis*, the decline of the small family farm, the effect on wildlife and food supply of the conversion of open land to industrial use, as well as the changes industrialization may bring to rural families, are sources of concern and study.

In the film, the people most involved—farmers, a small town businessman, an industrial realtor, an ecologist, a sociologist and steel mill workers, among

Calvin Pond of Wyanet, Ill., tells advantages of rural living while working in a steel mill in the film "Symbiosis."

others express their forthright views on the matter.

This straightforward film presents a contemporary look at the effect of the construction of a giant steel plant in the heart of Illinois farmland. The overall effect of the film speaks highly of the effort of Warren Lieb and Jack Lieb Productions in Chicago, who produced the film.

The film conveys the story of the situation just as it exists and generates added emphasis and believability by telling it through the words and actions of the people involved.

Symbiosis is available on a film loan basis from Sterling Movie Inc.

"Another Man's Family," A Story of Fire Protection

Another Man's Family is a powerful new film which is hard on fire safety, pulling home the realization that it could happen to you. This dramatic story

"Symbiosis" shows the successful integration of heavy industry into a rural area without disturbing serenity like this.

INTRODUCING THE NEW DuKane "Super-8"

SOUND PROJECTOR

... the only Super-8 projector that offers magnetic recording and playback, plus optical sound reproduction—a precision-made unit with automatic threading, quartz iodine lamp, solid state amplifier. A professional quality machine that is easy to operate.

a typical family in a modern dwelling is now available from the National Fire Protection Association, 60 Batterymarch Street, Boston.

Produced by RJ Film Communicators, the 25-minute color sound film constitutes an effective fire safety educational program for both youth and adult audiences.

Film Explores Inside Living Human Body

Union Carbide Corporation has released *The Incredible Voyage*, a filmed exploration inside the living human body. The half-hour color motion picture is from the series *The 21st Century*, produced by CBS News and broadcast over the CBS Television Network last year.

Requests may be sent to Modern Talking Picture Service, New York.

Homer Groening Films Distributed By ACI

ACI Films, Inc. has been appointed distributor of four films by Homer Groening. *Study In Art, Story, Psychedelic Wet and Wet* are available from ACI Films, Inc., 16 West 46th Street, New York.

Boeing, GE Report On Development of SST

Boeing Aircraft and General Electric (engine builders) have recently co-sponsored *You and Me . . . And the SST* to inform the public about current United States involvement in SST aircraft development.

Written and produced by Calm Productions, the 12½ minute, full-color film tells of progress made to date on development of a U.S. designed and built SST aircraft. Scenes of Boeing's new 747 making her maiden flight, footage of the French Concord and a look at the Russian TU-144 are also included.

For additional information: Boeing Aircraft Co., Seattle, Washington or Washington, D.C.; General Electric, West Lynn, Mass.

Thirteen Slide Projectors Accelerate IBM Show

The story of Federal Systems Division, a branch of IBM deal-

ing with electronic data processing systems for the federal government, was told at their annual sales meeting with a dramatic 20-minute 13-projector audiovisual show produced by Ken Saco Associates.

Thirteen slide projectors were assigned modular sections of the 15x20 foot screen and were programmed in synchronization with a taped sound and effects track. A kaleidoscopic effect allowed images to change rapidly, with some remaining longer to give continuity to the screen.

A conversion of the 13-projector program to a 4-projector travelling show is being planned and will be presented in company offices throughout the states.

Blending Highways With Urban Space, A Problem

It's How You Put the Pieces Together is a new 8-minute film in color and black and white. Produced and directed by Leo Trachtenberg, president of Harvest Films for the Federal Highway Administration, it features a free visual style that is an amalgam of live action and film-ography.

There are ingenuous drawings by children intercut with the highly sophisticated paintings of Jack Perlmutter. Photos of our urban highway system and core-city areas are merged with live action shots. These convey an impressionist view of the problem of blending highways with shrinking

urban space.

Soon to be released to TV and theatre audiences as well as community group showings.

How to Conserve Our Water in the Home

Contending that the private citizen can assist water conservation by measures in his own home, the 28-minute color film *Till the Well Runs Dry* explains some things that can be done to alleviate our national water problem.

Sponsored by Rheem Manufacturing Co., the film demonstrates the amount of water wasted through leaking plumbing systems and in waiting for hot water to reach the faucet.

Rheem believes part of the problem is lack of awareness on the part of the general public. The answer, Rheem believes, lies in a tight plumbing system; a wider application of recirculating systems; and the insulation of water heaters.

The film is being shown nationally by Rheem and its water heater distributors. For information, write Rheem Manufacturing Co., 7600 S. Kedzie Ave., Chicago, Ill. 60652.

Questioning Morality of Chemical, Germ Warfare

Germ And Chemical Warfare raises the disturbing question of the morality of developing such weaponry. This film, presented on the CBS News Program, 60 Minutes, had never before been seen by the general public.

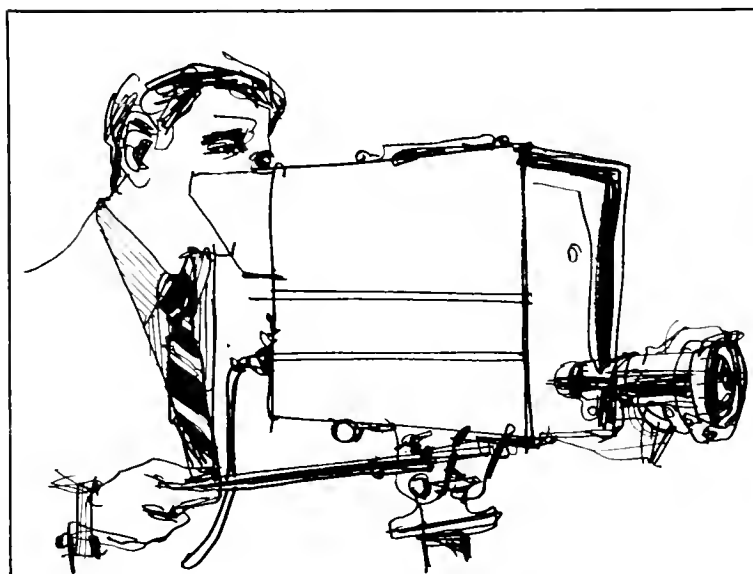

Available in b/w, 30-minutes, from Carousel Films, Inc.

64 Million See Auto Safety Feature Film

Your Safety First, the animated short on the development of auto safety features through the years, has been seen by a cumulative audience exceeding 64 million persons, according to Association Films, distributor of the film.

Sponsored by the Automobile Manufacturers Association, the 15 minute film has been shown more than 58,000 times in schools, colleges, clubs and community organizations and nearly 1100 times on television. In non-television showings, it has been seen by 2.4 million teenagers and 760,000 adults.

It was produced by John Sutherland Productions and is available through Association Film offices, throughout the country.

television and videotape a practical seminar

Advanced methods for training and communications. Teaches basic theory, scripting, graphics, lighting, production etc. Participants work in studios using a variety of equipment (Ampex, Bell and Howell, Concord, Panasonic, Sony, Shihaden etc.) and actually produce complete videotapes.

Some comments from past attendees: "These seminars fill a real need" (U.S. Air Force) . . . "Both enjoyed and benefited" (IBM) . . . "best short course I have ever taken" (Ciba Pharmaceutical) . . . "The course pays for itself over and over" (United Illuminating) . . . "Excellent, enlightening and educational" (Burroughs) . . . "One of the most interesting experiences in the field of TV" (U.S. Army) . . . "An outstanding course" (National Library of Medicine) . . . "Highly valuable and successful" (Ansul Chemical).

HOW GOOD ARE YOUR SALESMEN?

Are they as good as they could be?
Are they as good as you want them to be?

For example...do your salesmen call on customers with ideas that create a need and desire for your product or service?

Do they have the attitude and know the techniques that create sales?

Do they create prestige for your company, your product and for themselves as salesmen?

If you want your salesmen to become more effective and creative—show them the methods that will bring about this improvement. Show them...

THE "CREATIVE SELLING" PROGRAM

... with 14 meetings on the attitudes and techniques of helping people buy benefits. Complete with 7 sound color filmstrips, Leader's Manual, Salesmen's Manuals, Workshops, Quizzes, Evaluations, Summaries, Diplomas, etc.

YOU BE THE JUDGE

Take advantage of the Preview Offer. See and evaluate how this program will help your salesmen become as good as they can be and as good as you want them to be.

Super 8 Cartridges Direct from Videotape

Tele-Color Productions, Inc., in Washington, D.C. is now producing Super 8 film cartridges and reels in color direct from videotape. This development by Tele-Color can feasibly place the creation of original material easily within the budgets of many users for which the process was formerly economically prohibitive.

Tele-Color has perfected a process for the direct transfer of videotape to Super 8 film, using standard equipment with specially designed adaptations.

Trans-Canada Films Adds Eastmancolor Machine

Trans-Canada Films, Ltd., Vancouver, B. C. laboratory, completes installation this month of a new Eastmancolor machine. Ektachrome processing has been a routine operation there for some time, and the new equipment rounds out their capability for handling all film processing and printing requirements.

NSSO Establishes Audio Video Staff

Rear Admiral Douglas H. Lyness, commanding officer of the Navy Ship's Store Office (NSSO), established an Audio Video Communications Staff at the Navy Resale System headquarters in Brooklyn earlier this year.

After two years of research, a special study team recommended the establishment of the staff. Paul Jones, NSSO training and development coordinator was selected as manager of the new staff component. A 15-year veteran of NSSO, Jones has extensive experience in all phases of radio and motion picture production.

Substantial progress in areas such as merchandising, operations and personnel administra-

tion are some of the improvements foreseen as a result of the new staff's programs.

Plans call for the use of color kinescopes and videotapes. Advanced Communications Techniques, Inc., has been engaged as a consulting firm and will advise on equipment needs, videotape techniques and construction of a studio at the NSSO office.

Byron Streamlines Lab Chemical Operations

Byron Motion Pictures' new Washington laboratory has increased its efficiency and accuracy with the addition of new chemistry lab equipment.

According to Byron Roudabush, Byron president, his is the first laboratory to use the new Beckman Automatic Titrator and Endpoint Detector. The new instrument automatically performs potentiometric and pH titrations formerly accomplished by a long tedious procedure involving plotting curves by hand.

Precision chemical control is also enhanced by the new Ainsworth Analytical Balance in the lab. With the single pan substitution balance capable of weighing to 0.1 mg, the lab can make its own reagents by direct digital readout with precision to ± 0.03 mg.

A Byron technician using the new Ainsworth analytical balance.

A.V.E. Opens Specialized Equipment Showroom

A new type of showroom open to the public where the 16mm, 35mm slide projector and all audio-visual equipment will be on display for inspection has been opened by A. V. E. Corporation. The items shown are unique devices to enhance presentations, educational facilities, advertising agencies, industrial exhibits, and any related audio-visual utilization for maximum performance with minimum effort.

A. V. E. specializes in projection and sound equipment in all film sizes made to any desired specifications.

Automation and remote controls for the audio-visual field considered standard equipment.

For further information on projection, sound, or any related audio-visual device, write A. V. E. Corporation, 250 54th Street, New York 10011.

ANA Report Describes Techniques from Expo '67

The Association of National Advertisers has released a page, illustrated booklet describing the audiovisual techniques which created much of the excitement at Montreal's Expo '67. Designed to assist advertisers, exhibit builders and others involved with audiovisual presentations in planning and creating effective small group communications, the report concerning Audiovisual Techniques at Expo '67" is published under the auspices of the A. J. Audiovisual Committee.

Material for the report was gathered and edited by Eu Demick, president of Byron Motion Picture Service, who is one of the major audiovisual contractors at Expo. Others contributing information and illustrations for the report was Francis Thompson (producer)

"We Are Young" multi-
 en show for Canadian Pa-
 — Cominco), Robert T.
 gel (who designed the AV
 control systems for the "Man in
 Polar Regions" pavilion),
 n A. Twombly (who man-
 ged the Canadian Pulp & Paper
 gillion) and Robert Carr, presi-
 et of Macton Machinery Co.
 esigners and builders of
 ater-sized turntables).

 t New York, N.Y. 10017.
 00 per copy for non-mem-
 es; \$3.00 for members.

Mullins Broadcasting Buys Barbre Productions

Mullins Broadcasting Compa-
 y has purchased Thomas J.
 Barbre Productions in Denver.
 Barbre Productions becomes a di-
 vision of the Denver-based com-
 munications firm.

Founded in 1940, Barbre Pro-
 ductions is the largest film pro-
 duction facility in the Rocky
 Mountain area.

Majority interest in the pro-
 duction company was sold by
 Mrs. Anita Blasongame, widow
 of the late Thomas Barbre. Mi-
 nority interests were acquired
 by Barbre executives Paul F.
 Emrich and Harold J. Anderson.
 Mrs. Blasongame, Emrich and
 Anderson will continue to direct
 operation of the company un-
 der long term agreements.

A consistent national award
 winner, Barbre's production of
Colorado: Prehistoric Man for
 the State Historical Society won
 the 1967 Western Heritage
 award.

The company will provide a
 complete print procurement and
 packaging service for all 8mm
 needs, regardless of projector,
 cartridge or format.

WRS Laboratory Acquires Pittsburgh Laboratory

WRS Motion Picture Labora-
 tory has acquired Pittsburgh Mo-
 tion Picture Laboratory. Pitts-
 burgh Motion Picture Lab will
 be operated as a division of WRS.

Both companies are headquar-
 tered in Pittsburgh. WRS, located
 in Oakland, supplies laboratory
 services to the entire United
 States, including Pittsburgh. Pitts-
 burgh Motion Picture Lab at
 116-7th Avenue, downtown,
 services the Pittsburgh market
 primarily.

WRS Motion Picture Lab of-
 fers 16mm and 35mm color,
 black and white processing and
 printing. It is the largest motion
 picture service organization be-
 tween New York and Chicago.
 The Lab provides complete pro-
 ducer's services, equipment sales
 and rentals, optical and special
 effects work and total sound
 studio services.

Edelman, Inc. to Handle Chicago Film Festival

Daniel J. Edelman, Inc. has
 agreed to serve as the volunteer
 public relations counsel for the
 Chicago International Film Festi-
 val, Inc., a non-profit corpora-
 tion for the encouragement of
 the art of the film.

"The function of The Chica-
 go International Film Festival,"
 according to Michael J. Kutza,
 Jr., Festival Director, "is to offer
 Chicago a significant cultural pro-
 gram of the best motion pictures
 from around the world, thus con-
 tributing to the intellectual artis-
 tic growth of the community. In
 addition, the Festival acts as a
 stimulus to the creativity of local
 film-makers, and thus assures
 Chicago its place in the develop-
 ment of the art form of this gen-
 eration — the art of film."

The 5th Chicago Internation-
 al Film Festival will be held No-
 vember 8-19, 1969.

Daniel J. Edelman, Inc., an
 international public relations
 firm, has accepted the Film Festi-
 val assignment as a public serv-
 ice (cultural/community) proj-
 ect.

16mm Motion Picture Projectors

Kalart/Victor Moviematic Model STM-18MC3 16mm rear screen projector features MARC 300 high intensity light system and special power pack. For use as repeater rear screen projector or as standard projector for projection to remote screen. Write The Kalart Company.

The **Athena 224** 16mm sound projector has completely flicker free projection, variable speeds, stop with no loss of brilliance, pushbutton single frame, high fidelity sound, heavy-duty 100-2,000 ft. reel capacity, quiet operation and bright sharp pictures. Write L-W Photo, Inc.

The **Palmer Interlock Projector** is an easily operated, portable double film projector, designed for running picture and separate magnetic sound track in perfect sync. The Palmer magnetic film transport is combined with a Graflex 800 projector for top-quality picture and sound. The picture and sound can be run forward or reversed in perfect interlock. Track and picture relationship can be shifted a frame at a time in either direction. Write W. A. Palmer Films, Inc.

The **Kodak Pageant** sound projector, a protector projector, is engineered to protect your film investment by pampering your film. Solid state transistors make possible the producing of the ultimate sound that can be recorded on an optical sound track. It has a life-time solar cell for noise-free sound pickup. Everything is complete in one self-contained package. Write Eastman Kodak.

The **Viewlex Cine Sound 16** is a compact, self-contained unit for viewing, reading or projecting 16mm sound or silent motion pictures. Simple loading, and no threading make the Cine 16 particularly easy to use. It has a 2 inch f/1.6 lens with matching optical system; 500 watt lamp; and 1600 foot real capacity. Write Viewlex, Inc.

The **A.V.E. X-300 Xenon** 16mm sound projector is a small, quality built projector, ideal for auditoriums, theatres, agencies and small screening facilities. It is simple to thread and requires minimal maintenance. Write A.V.E. Corporation.

Two models of the 16mm **Bauer P6** automatic sound projector now feature the Marc-300 lamp by General Electric. This lamp delivers more than 1600 screen lumens. The color temperature of the Marc-300 is 5000 Kelvin, and produces brilliant color pictures. A built-in dowser is standard equipment. The tremendous light output solves the problem of long throws and large picture size. It also cuts through extraneous light. Write Allied Impex.

Kalart/Victor Series 75-MC3 16mm sound motion picture projector features MARC 300 high intensity light system and special power pack; available in both 15-watt (75-15 MC3) or 25-watt (75-25MC3) full-power RMS amplifier; snapout reel arms; 2,000 ft. reel capacity; safety film trips to prevent film damage; color coded threading; and rapid power rewind. Write The Kalart Company, Inc.

Graflex 16 Arc Light Projector uses the new G-E "Marc 300" quartz arc lamp and a power supply unit for brilliant light onto screens. Other features: transistor amplifier; twin 5" oval permanent magnet speakers; fumble-free film loading; pushbutton, color-coded operating controls; an adjustable film gate; and single-lever reverse operation. Weighs 37 lbs; power supply weighs 26 lbs. Write: Graflex, Inc.

16mm Projectors...

The Honeywell F16-1000 16mm sound projector has a pressurized, sealed, circulating oil system which continuously lubricates shutter and cam systems eliminating annual lubrications. This unit will not get louder after hundreds of hours use. It features magnetic and optical playback and remote control receptacle. Write Honeywell.

The A.V.E. Canary 16mm sound projector offers an f1.4 Canon 50mm lens, easy loading, still and slow-speed operation, automatic loop restoration, easy portability and many other features. Write A.V.E. for details.

8mm Motion Picture Projectors

The Carena 8S8 Convertible sound projector for both Super 8 and 8mm offers high fidelity sound movies for industrial, scientific and institutional applications. Write Karl Heitz, Inc.

The Bolex Multimatic is a completely automatic cartridge projector which can hold up to six cartridges of film. For additional flexibility the Multimatic can interrupt a cartridge and advance it to the rewind position while the next cartridge projects. Write Paillard Incorporated.

Technicolor's 610 "Movie-Vision" console projector suitable for daylight viewing combines super 8 brilliance with a 14 1/2" x 19 1/2" screen. It features a walnut grained exterior, built-in carrying handle, 3 conductor cord and stop-motion. Write Technicolor, Inc. for details on this and other projectors.

The Heurtier Dual Projector (which can be used to project both Super- and standard 8mm size films) now comes in an all-transistorized version which is lighter in weight than previous models. The projector available in both sound and silent versions and features automatic threading, nine speeds, still projection, quartz iodine lamp, piano key type switches and a voltage selection control. Write Cinema Beaulieu.

projector unit will accommodate all Technicolor Super 8 cartridge load film loop projectors. This package offers rear projection on a 5" x 7" screen as well as front projection. Write McClure Projectors, Inc.

The Eumig Mark-S-712 is a high quality super-8 sound projector which is fully transistorized for easy recording and playback. Write Eumig, Inc.

The Fairchild-Eumig 711 will accept the Eastman Kodak cassette-type film cartridge. The projector will be available in the United States early next year. Write Fairchild Industrial Products.

The MPO Videotronic Super 8 projector provides two-way projection with cartridge and reel-to-reel options. It uses its own built-in T-type screen or group projection on standard projection screen. The MPO V-S 8 uses Kodak's Super 8 film format with a magnetic soundtrack and balancing stripe right of the film. Write MPO Videotronic, Inc.

The Honeywell ST-8MO Super 8 sound projector features magnetic and optical playback, magnetic record, 800' reel capacity, reel-to-reel automatic threading, 50/60 cycle, 50 hour, FCS quartz lamp, 20mm f/1.3 standard lens or 20-32mm f/1.3 zoom lens. Write Honeywell.

The Kodak Ektagraphic MFS-8 projector can project a multi-media program—movies or single images in slide or film strip fashion — all from a single reel of super 8 film. It has automatic sensing of cue marks so the projector stops on any desired frame. Automatic focus controls permit switching from motion to still projection without re-focusing. It can go backward or forward at 6fps or 18fps and has an extra-fast 54fps speed for skimming extraneous footage. Write Eastman Kodak.

Jayark Super 8 sound projector features unique power-driven cartridge and film transport system which provides unusual stability of sound and picture with perfect synchronization. It can be automatically programmed to run continuously, intermittently, or stop at film end, as necessary. It has a jack outlet, single and/or multiple earphones and transistorized, instant-start amplifier. Write Jayark Instrument Corporation.

The Fairchild Seventy-21 is one of a Series-Seventy projection line employing the continuous loop Movie-Pak cartridge concept. The Seventy-21 is a traveling sales or recruiting aid that transforms from attache-case appearance to table-top theater. Capable of front or rear screen projection, the 17 pound projector has a 9" x 12" screen. The cartridges offer sound film presentation time of from two to 22 minutes. Write Fairchild Industrial Products.

The Kodak Ektagraphic 120 movie projector ends film handling with easy-to-use 50 or 100 foot super 8 cartridges. Simple push button controls allow the user to stop the film, reverse it and repeat specific segments as often as he likes. The projector weighs less than 15 pounds and operates on 110-125 volts, 60 cycle ac. It comes with a 22mm f1.5 lumenized projection lens and an 80-watt, 30-volt DFE projection lamp. Write Eastman Kodak.

The Technicolor 1000B heavy-duty super 8 optical sound projector features cartridge loading. An electrostatic cleaner rids film of dust and debris with each showing. Hi-lo switch gives added projection power or lamp-saving economy. The optical sound track is permanent. The solid state sound system needs no warm up. Write Technicolor.

35 and 70mm Projectors

The Birns & Sawyer stop motion 35mm projector is a good data analysis tool in various fields of scientific research. The projector allows the serious frame-by-frame analysis of important films over long periods of time. The Model 2000 projector is designed for analyzing high-speed instrumentation film, for projecting 35mm x-ray film from 8x10 inches to as large as 18x24 feet, and when using the slow-moving rate, x-ray film may be analyzed showing detail and even movement. Accepts all 35mm sprocketed film of the x-ray, motion picture or microfilm type. Write Birns & Sawyer.

The Westrex 70 projection and sound system is designed to handle both 35mm and 70mm films. Its modular design permits expansion of the basic 35mm or 70mm projection and single-channel sound to a combination projection and multichannel sound. Write Westrex for information on a variety of presentation equipment.

Sound Slide & Slidefilm Projectors

The Audiscan 16mm continuous loop filmstrip projector and synchronized audio tape system can be programmed for up to 25 minutes of sound and 225 visuals in a single cartridge. It weighs less than 12½ pounds and has a 5¼" x 7" screen. Cartridges need no rewinding and are ready for instant replay. Picture advance can be programmed at 5 frames per second for stop-action effects. Another feature is a manual hold and picture advance. Write Audiscan, Inc.

The AVS-500 Projection Sound System combines a Norelco Cassette Tape Player and a Kodak Ektagraphic Projector with a solid-state programmer which handles syncro slide advance signals from the tape deck to the projector. It has manual or automatic shutoff. A simple pulser unit, the AVE-500 "P", is available for those who wish to "beep" their own tape programs. Write Audio Visual Systems, Inc.

A-V Equipment...

Sound Slide & Slidefilm Projectors

The Busch big screen sound cine-slide projector, Model 6-240SS is a fully self-contained projection unit with a 28" x 28" square plexiglass screen permitting the use of super slides, instamatic slides, horizontal and vertical 35mm slide formats. The unit employs the self-focusing Kodak Carousel Model-850 slide projector and the Orrtronic Syncro-Recorder tape recorder. The unit has an 80 slide capacity and can be controlled automatically by an inaudible signal recorded on the tape. Busch also manufactures many other self-contained projection devices. Write Busch Film & Equipment Company.

The Courier 16 by La Belle Industries is a portable, continuous, synchronized tape-filmstrip audio-visual unit. It uses single unit tape and 16mm film cartridge and has a built-in Polacoat screen and operates with 117 volt A.C. Write La Belle Industries, Inc.

The 3M Model 525 sound-on-slide system allows you to put the message, the music, the live sound right on every slide. Each slide can contain up to 35 seconds of sound. Slides can be changed and you can rerecord over the old sound. Write 3M Company.

The DuKane Cassette A-V Matic combines the Cassette with filmstrip for a versatile and easy to use audio visual unit. It operates automatically from a 50Hz inaudible cue signal recorded on the sound track. Picture and sound can be stopped and a push-button filmstrip advance allows you to use the projector as a previewer. Film is automatically rewound and ready for re-use. The unit provides excellent sound fidelity and a brilliant picture on a 9" x 7" screen. Write DuKane Corporation.

The Sentinel 16 is a point-of-purchase, continuous, synchronized tape-filmstrip audio-visual unit with 9 3/4" x 13 3/4" screen. It uses single unit tape and 16mm film cartridge, and has a built-in Polacoat screen. Write La Bell Industries, Inc.

Vis-u-tote sound/slide projection system requires only pushing one button to operate. Continuous 35mm slides and 1/4 inch taped sound track eliminate threading, synchronizing and fumbling. Kodak Carousel projector is built into case which also houses sound. Write Vis-U-Line Systems, Inc.

The Kalavox converts a standard Kodak Carousel or Ektagraphic slide projector in which up to 60 seconds of sound is combined integrally with the color slide. The message is recorded through the Kalavox. The message can be changed by recording over it. The Kalavox permits holding, repeating or rejecting the slide. Write The Kalart Company, Inc.

The Narrator 800 is a self-contained fully automatic sound-slide projection system allowing you to produce your own audio/visual presentations. Just select your slides, record up to one hour of audio material, program the magnetic tape and playback a fully synchronized program. Write Montage Productions, Inc.

Slide & Slidefilm Projectors

The Dynamic Dissolve Slide Projection System, the Model 775, includes, in addition to the dissolve control, two 1200-watt tungsten halogen Selectroslide Ultrabright Projectors and remote controls. It makes possible such effects as pans, slow fades, animation, and multiple-disclosures, and has a high-speed dissolve either forward or reverse, and an infinitely variable speed dissolve forward. Write Spindler & Sauppe, Inc.

The A.V.E. 1200 carousel slide projector has an 80 slide cartridge and a built-in 5-15 second timer. It is remote controlled and accepts from 1.4" to 1 1/2" lenses. It is capable of projecting any 2 x 2 slide in glass mount. Write A.V.E. Corporation.

Decision System's Model 80 slide projector provides push button selection of any of 80 slides with an average selection time of 1.5 seconds. It is also available with auto focus and fade dissolve. Another model, the Caro-Beam produces 4000 lumens. Write Decision Systems, Inc.

The Kodak Carousel RA-950 Projector has a remote random-access control panel which provides complete remote control for all of the projector functions—smooth, motorized focus; single-slide “forward” and “reverse”; “on” and “off”; and instant access to any one of 81 slide positions. It is designed for manual or computer control. Write Eastman Kodak.

The Theaterama/one is a self-contained rear projection unit designed to project slide images that stay bright regardless of surrounding light conditions. It features an 18" x 18" screen. Another model employs two projectors for split-screen projection. Write Motiva Ltd.

The Ganz Super 900 can project slides onto screens up to 35 feet wide with even illumination and good image quality. It is available as a continuous feed or random access machine and can be programmed to perform 6 different functions simultaneously. Write de-Martin Marona & Associates.

The Shure Model 570 Dynamic Lavalier Microphone is a studio quality unit designed specifically in size and performance for use in TV and similar critical applications where a very small wearable microphone is required. Write Shure Brothers, Inc. for a full range of microphones, microphone mixers, headset amplifiers and sound system.

Richard Sound Unit is ruggedly built record player with space to accommodate filmstrip projector inside the case. The screen in the lid completes requirements for sound slide-films and presentations. Accommodates most 150 watt projectors (not included). Four speeds. Write Richard Manufacturing Co.

Tape Recorders & Sound Equipment

The Uher 1000 Report Pilot 1/4" tape recorder (weighing 7 pounds) is engineered for sound/film synchronization. It is normally powered by a re-chargeable nickel cadmium battery and can also be operated from 110-250 volt power mains (AC) and from 6, 12 and 24 volt auto batteries (DC). The Uher 1000 comes with complete sets of frequency response curves and a calibration curve of the photoelectric automatic level control. It has a guaranteed frequency response of 20-20,000 cps at its single speed of 7 1/2 ips. Write Cinema Beaulieu.

The Model 130 Classette tape recorder is specifically designed for use in schools. It eliminates tape handling and gives push button convenience. It has an automatic level control, three digit tape counter, lighted recording meter, 20 watt P.A. system, instant locking pause control, microphone and auxiliary input/headset and external speaker output. Write Audiotronics Corporation.

The Bell and Howell Model 2433 is the first tri-head stereo tape deck in their line. It is a single-direction, four track machine capable of all special effects—sound-on-sound, sound-with-sound, and echo chamber. It features the Audio Eye, a visible monitor/confidence light which assures that the unit is functioning in the mode selected. It also features separate recording head confidence lights to monitor the record function for each channel. Write Bell & Howell.

The Wollensak audio visual cassette recorders embody a full-sized drive system and electronics which are required for long dependable operation. The tape transport system is composed of an innovative direct-drive biperipheral flywheel and full-size AC motor. Write 3M Company for a wide range of Wollensak recorders.

The Nagra IV 1/4" tape synchronous sound recorder has added many features while retaining the features of the Nagra III. Write Nagra Magnetic Recorders, Inc.

Tape Recorders & Sound Equipment

The Shure Solo-Phone (Model SA-1) is a stereo headphone amplifier designed for use with a record player, tape recorder, or FM tuner to create a private personal high fidelity-stereo listening system. Write Shure Brothers, Inc.

The Caro-Sound control unit converts a standard Kodak Carousel projector into a completely automatic sound/slide projector system that offers the ease of cartridge loading in addition to the convenience of synchronized sound presentation. Write Elco Corporation.

Videotape Recorders

Wollensak video recorder is a magnetic recorder that records and plays back both sight and sound. Convenient and easy to operate, the recorder automatically records sight and sound in perfect synchronization. Video tapes require no processing, and may be stored and replayed indefinitely. The unit may be coupled to an optional tuner and TV monitor receiver, and will record from both broadcast TV and closed circuit. Write 3M Company.

The Palmer Television Film Recorder produces 16mm film from videotape playback, broadcast, or closed circuit transmission. The system includes a camera, monitor, and integral sound recording unit. The camera incorporates a patented shutter designed to eliminate the shutter bar problem. Its transport features a fixed register pin to provide unusual film steadiness and the fast pull down rate insures complete picture information and maximum resolution. 1200 foot or 2400 foot magazines are available. Write W. A. Palmer Films, Inc.

The Model VR-7000 is one of a complete line of Ampex videotape recorders. It incorporates features meeting stringent closed-circuit TV requirements and provides excellent picture quality. Ampex also carries a complete line of cameras and accessories. Write Ampex.

The Sony Videocorder, Model EV-310, is compact and portable and permits professional video tape recording of a wide variety of applications, in either full NTSC color or monochrome. It uses one-inch video tape and conforms to standard FIA TV signal requirements. Any composite TV signal with 60 fields per second, including random interlace signals, can be recorded and played back with high resolution and excellent quality. Write Sony Corporation.

Overhead Transparency Projectors

The AO Wide Angle Apollo overhead projector provides big screen images that are clear, crisp and sharp, even when space is at a premium. At 5 feet the screen image is 51" square. The Wide Angle Apollo projects 2200 lumens on the screen and the head tilts a full 40°. A large easy-to-handle knob makes possible fast, sharp focusing. A power cooling system keeps the platen cool and comfortable to touch, and continues to run until the instrument is sufficiently cool. The functional corner post design gives maximum in-use convenience when using transparencies with multiple overlays. Write American Optical Corporation.

The CIP Overslide projector adds to the advantages of overhead projection the economy of 2 x 2 slides and great flexibility in their use. Information can be added to the slide image with prepared overlays or by writing on a translucent sheet on the stage. Write Visual Impact Materials Inc.

SEE PAGES 60-61 FOR COMPLETE
 DIRECTORY TO AUDIOVISUAL EQUIPMENT
 MANUFACTURERS MENTIONED ON THESE PAGES

Buhl Optical is marketing a series of customized overhead projectors. The series 800 is adaptable to unlimited combinations of projection distance and screen width. The Series 800 will give long projection distance and small image or short projection distance and large image. A recent example is the need for a 12.5' screen width at a projection distance of 100'. Another special overhead projected a 12' image from 11.5'. Each projector is factory engineered for specific projection distance/screen width combination. Standard light source is a 600 watt quartz bromine type DYS lamp. Higher wattages are available. Write Buhl Optical Company.

Film Handling Equipment

Paulmar's Model 911 automatic 16mm film inspection and cleaning machine fills every-day and year-round 16mm film maintenance requirements. It features an integrated film cleaning facility which is electronically controlled for fully automatic liquid application during the inspection cycle. It has a variable speed control and built-in exhaust and speed film drying system. Write Paulmar, Inc.

Special & Multi-Purpose

The Astrolux is a giant image outdoor indoor projector based on an optical design formula incorporating a condenser system and a 325mm Leitz telephoto lens. It projects to distances of 1000 feet and more on an area of up to 200 by 200 feet. Write Karl Heitz.

The 1600 16mm Viewer/Editor has a 41 4" x 31 3" screen for easy viewing and weighs 10 pounds. Write Maier-Hancock Sales, Inc.

The Programmed Instructor uses a modified Technicolor Super 8 rear and front screen projector integrated with a Norelco cassette tape player and rear screen viewer. This completely self-contained unit provides brilliant still and motion picture advancement, still frame reversal, and synchronous stereo sound. Write Visual Instruction Systems, Inc.

The "linear torque" servo motor combined with a smooth stepless variable transformer voltage controller featured in Gryphon's line of powered film rewinds offers safe fully controlled film winding. Write Gryphon Corp.

The Christie Xenolite, shown here with the Kodak Carousel slide projector, provides up to 4 times brighter screen with a 450 watt Xenon lamp, front or rear screen projection, constant and more brilliant color, better resolution and depth of focus, Christie Cote dichroic mirror, 1500-2000 hour average bulb life. The Xenolite is also available with the Kodak Pageant 16mm movie projector and the Beseler 3 1/4" x 4" slide projector. Write Christie Electric.

Screens & Accessories

DaLite's Deluxe Model B lenticular screen has a concealed automatic tensionizer which keeps the picture surface taut and flat even when tilted at considerable angles. The lenticular picture surface provides rich colors and excellent definition, even in undarkened rooms. It is available in three sizes: 50", 60" and 70". Write Da-Lite Screen Company, Inc. for details on this and other models.

Panacolor's Magazine Motion Picture Projector with a built-in projection screen has a capstan drive and two hour film magazine. The projector has an optical prism system replacing the claw pull-down intermittent movement arrangement. The magazine 12 rows of images and 12 rows of optical sound are printed lengthwise on the strip. Write Panacolor, Inc.

The Command Performer System consists of a Digital Programmer, a Digital Decoder and a Command Recorder and programs or remotes multi-screen, multi-projector presentations. The digital signals are transmitted over a single 1/4" low-voltage cable. Write Arian Prod.

A-V Equipment . . .

continued

Screens & Accessories . . .

Decision System's custom audio visual control system will control any combination of 2 x 2 slide projectors, 16mm motion picture projector, film strip projector, tape recorder, CCTV room lights and drapes and telephone communication. Write Decision Systems, Inc.

Smith System's lectern-desk is a standard 30" high until the built-in lectern is raised to a choice of four heights for use with the overhead projector. Write Smith Systems Manufacturing Company for a variety of audio-visual resource center equipment.

The File-A-Matic 600 provides automatic film filing and retrieval. Just push a button, and within thirty seconds the film you want is at the most comfortable retrieval level for you. Write Neumade Products Corporation.

Teaching Dynamics Model TD-120 multi-media sound system features automatic programming with any combination of slide, filmstrip or motion picture projectors. Record your own program and cue it to work automatically. Write Teaching Dynamics.

The Pixmobile Listening Center provides mobility and convenience for group audio instruction. Recorded programs can be presented to groups of from one to eight with your existing play-back equipment. There is no necessity to use expensive volume-controlled headsets, as the PLC is equipped with built-in volume controls and each listener can adjust the volume to suit himself. Write Advance Products.

The Draper table top screen consists of a spring roller screen on an attractive hard maple base, and is set up in seconds on any flat surface. Available in 2 sizes—18"x24" and 30"x30", the screen folds into compact package when not in use and is well suited for "on-the-spot" A-V presentations. Draper also has many other screens, including the Modulator, a safe and dependable large wall screen. It comes in many sizes. Write Draper Shade and Screen Company.

The VTR Mobile Learning Center can be custom designed for special TV purposes. The VTR Center will hold a videotape recorder, a monitor and collapsed camera equipment and materials all in one convenient unit. Write H. Wilson Corporation.

The Cue-Slide Programmer is a sound slide synchronizer which works with any remote controlled slide or filmstrip projector and a stereo tape recorder. Write The Kliten Company, Inc.

This cassette-to-cassette duplicator produces 4 one-hour cassettes every 4 minutes. Plug-in slave duplicators are available which make an additional 8 cassettes. Another model duplicator by Infonics will duplicate reel-to-reel or cassette masters at the same rate. Write Infonics.

Sky-Diving Stock Shots

What may be the world's smallest stock-shot film library also is probably the world's largest of its kind. It covers parachuting, sky-diving, and aerial/aircraft background material. Footage is available in 35mm or 16mm, and is all in color. A catalog is available without charge from Dave Burt, Parachuting Associates, Inc., 1011 Cole Avenue, Hollywood, California 90038.

Motion Picture Catalog University of Iowa

More than 275 films produced by the University of Iowa are described in a catalog that contains brief summaries of each film by category.

Included for quick reference is a classified index and detailed information on the rental or purchase of each film. The date of production or revision of each film is also included.

For a copy of the catalog, write Audiovisual Center, Division of Extension and University Services, University of Iowa, Iowa City, Iowa 52240.

Tungsten-Halogen Lamps

A new brochure on the recently introduced 2000 and 5000-watt tungsten-halogen lamps is available from the Photolamp Division of Sylvania.

The new tungsten-halogen lamps, designed for application in studio, theatre and television lighting, have uniform light output throughout the life of the lamp and color temperature remains constant. The lamps have at least double the rated life of conventional incandescent lamps, and are directly interchangeable with

The brochure, WC-15, is available without cost by mail from Sylvania Electric Products, 1100 Main St., Buffalo, N.Y. 14209.

VTR Data Sheets

Two four-color data sheets for new video equipment are available from Sony Corporation. The four-page brochure details the latest addition to Sony's EV-310 Video Cassette Recorder, and includes complete specifications, callouts of all controls, and brief descriptions of optional accessories. Another sheet describes in detail the other options, the Color Video Color Pack, which provides an economical way of recording and playing back tapes on the EV-310 and P

Data sheets may be obtained from John McDonnell, Corporation of America, 10 Van Dam Street, Long Island City, New York 11101.

BUSINESS SCREEN MARKETPLACE

HELP WANTED

THE FASTEST GROWING FILM PRODUCTION HOUSE IN SOUTHWEST IS LOOKING FOR:

CINEMATOGRAPHER . . . Creative, young cinematographer with professional competence in 16 MM and 35 MM color. Must have a flair for unusual, a desire to do exciting things on film. Send Demo. \$ Open.

Audiences for Business Films
 Modern Talking Picture Service has published an illustrated booklet called "Your Key to Successful Film Distribution" to relate the business film story for advertising, public relations and marketing executives. The booklet describes the audience opportunities that have been developed at schools, airports and colleges.

The various types of film suitable for each case are discussed, as are promotional effort for film programs, techniques for securing audience exposure and reaction. Modern's network of film libraries. Replies for copies should be addressed on a plain letterhead to Modern Talking Picture Service, Inc., 1212 Avenue of the Americas, New York 10036.

Canadian Film Directory

1,000 free films, and the 488 sources in which they are available, are listed in a directory published by Crawley Films Limited. Covering a wide variety of subjects, the films are mostly in color and many have alternate versions. Copies of the directory are available to Canadian organizations by writing to Crawley Films Limited, 19 Fairmont Avenue, Ottawa or from the company's offices in Toronto and Montreal.

Bell & Howell Catalog

A up-to-date catalog of Bell & Howell Audio-Visual products available under the Rental Supply Schedule is now being distributed. The catalog contains descriptive information and prices for Bell & Howell overhead projectors, 16mm projectors and camcorders, 35mm filmstrip projectors, and the complete line of accessories. Names and addresses of local service stations are also included. Copies are available by writing Government Sales, Department 8536, Audio-Visual Products Division, Bell & Howell Company, 150 McCormick Road, Chicago, Illinois.

Videotape Producers Manual

A complete how-to-do-it guide for television videotape production is now available for radio-visual directors and educators from Bell & Howell Company. The 42-page, illustrated book called the Videotape Producers Manual, is being offered by the Magnetic Products division, manufacturers of "catch" video and audio recording tape. The book takes the reader through each step from the planning of the television fact itself to the handling of the finished product. A complete glossary of terms used in television videotape production is contained in the back of the book.

The book offers in-depth treatment of subjects such as the use of visuals, lighting, production team, the video tape-tape recorder relationship, care and handling of tape and suggestions on how to get the most from a videotape system.

The manual is available free from: 3M Company, Magnetic Products Division, Market Services Department, 3M Center, St. Paul, Minnesota 55101.

Used Film Materials

Used motion picture, general photographic, and graphic arts film materials, which can pose a costly disposal problem at time of discard, have a salvage value through Western Used Films Ltd. which recovers silver from emulsions. The firm buys both positive and negative film in black and white, but not color film, clear sheets or photographic paper products. In quantities of 400 pounds or more, the company will handle all documentation necessary for shipment of the material to its Canadian destination.

A buying schedule and information on procedures is available on request from Gordon L. Lott, Western Used Films Ltd., 1827 Victoria Dr. Diversion, Vancouver 12, B.C., Canada.

Film Chain Bulletin

A bulletin illustrating and describing the Kalart/Victor low-cost 16mm TV Uniplex Film Chain System is available. This system consists of special 16mm sound film projector adapted for television use, TV camera, adjustable camera mount and mounting base. A 16mm TV film chain is used for showing one film on television at one or many remote locations by means of closed circuit television. The system can also be used for recording 16mm film on video tape for storage purposes and future replays. Both TV camera and projector can be used apart from the film chain for maximum equipment utilization. Complete specifications are included in Bulletin #2675, The Kalart Company, Inc., Hultenius Street, Plainville, Connecticut 06062.

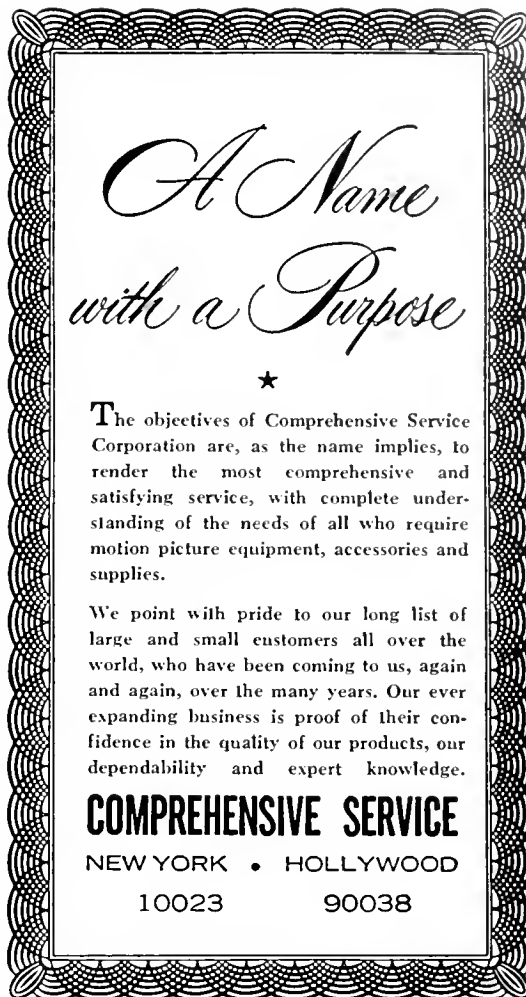

New Ewing Galloway Catalog

Filled with reproductions of timely, lively stock photos the new Ewing Galloway catalog of their latest photos has just come from the press. It represents hundreds of shots, trend setting, current and representative of the more than a million and a quarter available from this long established house.

The catalog is free to potential users of stock photos who write to Ewing Galloway, 420 Lexington Avenue, New York, N. Y. 10017, mentioning this magazine.

Chicago Festival to Show Industrial Films Alone

In a move long advocated by this publication, sponsors of the 5th Chicago International Film Festival, headed by Michael Kutza, will judge and exhibit information, business and sponsored motion pictures in entirely separate facilities this year.

Utilizing a growing corps of recognized leaders in information and sponsored film production and distribution, the festival should gain wider appeal to this phase of its 1969 program. Heading the arrangements committee for this segment of the November 8-19 program is Jack Behrend, president of Chicago's Behrend's, Inc.

For festival entry forms, write the Chicago International Film Festival Inc., 235 W. Eugenie St., Chicago, Ill. 60614.

Hack Swain Honored

Sarasota (Fla.) film producer Hack Swain was recently named the outstanding industrialist of Sarasota County. The honor was bestowed upon the chairman of Hack Swain Industries by the Industrial Development Council.

Swain, a resident of Sarasota since the 1940s accepted the award saying it was the highlight of his career. Included in the tribute were congratulatory messages from Jack Paar and Don McNeill (former host of the Breakfast Club). All had worked with Swain at the Sarasota studio.

An outstanding honor to a most deserving man.

Kodak Gets "Emmy" for TV Film Processing System

At its annual "Emmy" awards presentation in New York's Carnegie Hall, the National Academy of Television Arts and Sciences presented Eastman Kodak Company one of its gold statuettes in recognition of the company's development of a fast, practical color film processing systems for television use.

Making the presentation, TV personalities Werner Klemperer and Celeste Holm read the Academy's citation: "To Eastman Kodak Company for the ME-4 process, making it possible to develop color film with greater speed and sharper images than

ever before, materially facilitating the presentation of news and other programs."

Dr. Norwood L. Simmons, assistant vice president and general manager of the company's Motion Picture and Education Markets Division, accepted the award. "This is indeed an honor," he said.

New Atlanta Site for Jam Handy Organization

The opening of a new Atlanta location for The Jam Handy Organization has been announced by Jamison Handy, president of the Detroit-based national business communications company. The office is located at 1800 Peachtree Center, 230 Peachtree St. N. W. in the Georgia metropolis.

Handy noted that the Atlanta facility is set up to serve JHO clients throughout the burgeoning South, with the entire staff of the Organization's creative and production specialists available to that area. Principal client served by Jam Handy in Atlanta is The Coca-Cola Company and its various divisions, including the Foods Division located in Houston.

Heading the new facility is James A. Ruwoldt, vice-president, who has been associated with JHO since 1948. In 1960 he assumed the post of full-time contact for production activities with Coca-Cola and was promoted to account executive in 1965. He was transferred to Atlanta in 1967 to facilitate services of the Organization in the Southeastern states.

The local staff includes Charles

Wilson, field services representative; Robert H. Thomas, Jr., creative consultant responsible for liaison with writers and production specialists, and Cliffe H. Sparks, senior vice-president.

Paul Woodbridge Dies

Veteran film writer Paul Woodbridge, 62, died unexpectedly in a Hanover, N.H. hospital recently.

Woodbridge had written more than 350 scripts during his career and since 1946 had operated his own film agency. During his writing and advertising career he worked for Eastman Kodak Co., CBS, the federal government and several advertising agencies.

Radiant Corp Acquires John Coburn Associates

Radiant Corporation of Morton Grove, Ill., has acquired John A. Colburn & Associates business and educational film producers.

Radiant will distribute Colburn-produced films on a national basis and John Colburn will become midwest film distributor for Radiant Education Products, such as its Knowledge 8 film series division.

Kodak Associate Company Established in Norway

Kodak Norge A/S, a new associate company of Eastman Kodak, has begun distribution of Kodak photographic products in Norway as the result of an agreement between Kodak and J. Nerlien A/S.

Making Films at United

August • 1969

This time machine is helping Union Carbide

prepare students for the future.

Union Carbide, The Discovery Company, is working on lots of important plans for the 21st Century. And they think today's young people should be planning for it, too.

So, Union Carbide is bringing tomorrow's world into the classroom. On film.

The company has converted the first twenty-three episodes of its widely-acclaimed CBS television series, "The 21st Century," into 16mm sound-and-color motion pictures. And, with the help of their advertising agency, Young & Rubicam, they are offering these films to schools — together with illustrated teaching guides — free of charge.

This far-reaching public service project involves a substantial investment. So Union Carbide wants

to be sure they reach as many students as they can. That's why they called in Modern, the world's largest distributor of sponsored films.

Since last September, thanks to Union Carbide, millions of students throughout the country have seen what it's like on Mars and beyond. They've descended to the ocean's depths. Visited our future cities. Discovered the coming wonders in transportation, communications, genetics, and daily living. All in their own classrooms. Via film.

Through this exciting program Union Carbide is doing more than alerting young people to the opportunities and challenges of tomorrow. They are communicating with their customers and employees of the future.

MODERN TALKING PICTURE SERVICE, INC.
1212 Avenue of the Americas, New York, N.Y. 10036

Want more information about Union Carbide's films? Or about how sponsored film programs can benefit your company? Write to Modern.

WE SELL PROTECTION.

Don't let our name fool you. It's a 'front' for a whole gang of 'protectors.' All hard as nails. All able to take good care of you wherever you go.

Like plastic reels. In all sizes and kinds. For 8mm, Super 8, 16mm, 35mm, 1/4" tape, and video tape. Tape cassettes, too. All real tough stuff.

And Plio-Magic plastic cans to hold our plastic reels (plus storage boxes for Technicolor-type film cartridges).

Likewise Plio-Magic shipping cases for films, filmstrips and

Fairchild-type film cartridges.

Also film cores for 8mm, 16mm, 35mm, 70mm and 105mm. And Reel-Pak self-enclosing reels for 8mm, 16mm, Super 8 and microfilm. And idler rollers for 8mm, Super 8, Double 8, 16mm, 32mm, 35mm and 70mm.

We even make linear polyethylene ball-bearings, with ground-glass balls.

So, if you know what's good for you, you'll send for our complete catalog. Or call us.

Or else.

Xerox Corporation Adds Film Production Arm

Xerox Corporation's Education Group has created a new company in the motion picture production and distribution business.

Called Xerox Films, the new organization will be located at Xerox Education Group headquarters in Stamford, Conn.

In making the announcement, Dr. Robert W. Haigh, Education Group president, said "While we initially plan to concentrate on educational films for use in elementary and secondary schools, we ultimately expect to offer a wide range of audio visual products beyond formal education to the more informal adult education market and eventually to the home consumer market.

"The initial emphasis of providing imaginative, high interest films to formal schools," he continued, "provides us with the op-

portunity to enlarge, through varied media, our already established capability in textbook and classroom periodical publishing. Due to the increasing acceptance and use of multi-media materials in schools, we feel the market is extremely promising and we expect such materials to become an increasingly important part of our product line."

Named by Haigh as president of Xerox Films is Vincent J. Byrne, formerly manager of business development and planning for the Education Group.

ASFA Film Exposition Sept. 17-19 in Washington

The American Science Film Association will hold its 1969 conference and science film exposition at the Shoreham Hotel in Washington, D.C., September 17-19.

Program highlights include discussion on the use of science films on television and in higher education. In addition, a special film show open to the public is slated the first day of the meeting.

Reeves Production Services Opens in Washington

Reeves Washington has opened at 1516 P Street N.W. The office of Reeves Production Services is under the management of Art Singer, formerly director of development for Channel 26 (WETA) in Washington.

The office will serve primarily as liaison between government agencies and local producers and Reeves Production Services which include Reeves Sound Studios, Reeves Video and Action Corporation.

SMPTE Plans Super 8 Symposium at Conference

In an experimental program format designed to present topics of current interest and of applicability corresponding with recent developments in the motion picture industry, a special Symposium on Super 8mm Production Techniques will be held during the final two days of the 106th Technical Conference and Equipment Exhibit of the Society of Motion Picture and Television Engineers, Sept. 28-Oct. 3, at the Century Plaza Hotel, Los Angeles.

SMPTE Vice-President for Motion-Picture Affairs and Program Chairman for the Symposium, Dr. Richard J. Goldberg, Houston Fearless Corp., Los Angeles, has announced that the program mainly of tutorial papers specially invited for the two-day

event. "We will attempt to define where we are, where we've been and where we are going." Dr. Foldberg said, "and in particular we want to thoroughly explore optical vs. magnetic track recording and loop vs. reel-to-reel concepts of presentation as well as other pertinent topics." Ten papers will be scheduled, some of which will be from abroad. Each paper will deal with a different aspect of super 8 production.

Movielab, Inc. Acquires Berkey Lab Facilities

Movielab, Inc. has acquired the professional motion picture processing and video divisions of Berkey Photo, including laboratory facilities in New York and Los Angeles.

The acquisition was made for notes and cash in excess of \$10,500,000.

Optimedia Systems Opens New Jersey Headquarters

OptiMedia Systems, Inc., has opened new headquarters at 1080 Route 46, in Clifton, New Jersey. The firm provides total capability audio/video communications services to business, government, industry and education.

In their new facilities, OptiMedia offers professional quality television studios equipped with broadcast type switching and special effects units, film and slide chain, plumbicon cameras and high band videotape recorders with electronic editing.

Typical applications include sales training, management development, classroom instruction, advertising, manufacturing, and research and development.

Modern Opens Skyport Cinema at Kennedy

Modern Talking Picture Service opened a new Skyport Cinema in the International Arrivals Building at Kennedy International Airport July 1.

Entertaining shorts will be screened 10 to 12 hours a day, seven days a week, in a lounge area which travelers and their guests can enter and leave as they please.

The films will cover a wide

variety of subjects, including travel, sports and business.

The lounge is the 12th Sky Cinema operated by Modern Talking Picture Service, Inc. Another Skyport Cinema is already in operation at Kennedy Airport in the United Air Lines Terminal.

Writer Jim McGovern Opens Own Script Firm

Jim McGovern, award-winning film producer-writer-narrator of Twin Cities television stations, has formed his own film script firm.

McGovern won the National Headliners Award in 1964 for the best public affairs television documentary in the U.S. In 1965 he received acclaim from the American Association of University Professors for a documentary he produced on academic freedom.

McGovern's offices are located at 934 Hampden Ave., and University Ave., St. Paul, Minn.

Canadian Film Institute Plans Film Study Center

Following a recent meeting of the Board of Directors, the Canadian Film Institute President Jean Clavel announced that the institute would establish a Centre for the Advanced Study of Film. Commenting on this decision, he said, "The explosion in the study of film and television in Canadian universities and colleges and the cultural use of films generally makes essential this development in CFI's programme. The serious student of cinema must be provided with resources equal to those provided for his colleagues working in the other arts".

Clavel said the Centre will already have extensive resources. CFI's Reference and Information Centre (documentation on 10,000 films, a 4,000-volume bibliography, film periodicals from 20 countries) will be considerably expanded over the next 18 months, with the aid of a grant from the Canada Council. The Centre will form the core of the new Film Study Centre. Special emphasis will be placed on the development of resources for the study of the Canadian cinema.

The Audience is the End-Result of All Our Creative Production Efforts

THE EVER-EXPANDING AUDIENCE for sponsored motion pictures and videotapes is reflected in the Special Report featured in these pages. The movement of these film and tape prints to thousands of adult and youth audiences, both in the U.S. and abroad, is a thoroughly-organized effort by experienced film distribution companies and by the sponsors themselves, especially when their libraries are of size to validate such operations.

The activity of these sponsors in the past year is also reflected in our Annual Survey of Sponsor A-V Activity. These columns go beyond the *public, external* aspect of audiovisual media, of course, and include the many specialized kinds of filmed and taped presentations used for internal training, etc.

The *size* of the public audience, however, has grown constantly and the means of reaching them have increased proportionately. Well over a half-million 16mm sound projectors (still the basic equipment) are owned by all kinds of groups: industry, schools, churches, lodges, clubs, unions, etc. Beyond that *basic* outlet, there are other important channels of sight/sound distribution:

1. Public-service television showings account for thousands of shipments and millions of viewers who see informative, interesting sponsored films and videotape messages in the comfortable privacy of their living rooms.
2. Theaters, both at home and abroad, comprise another key channel of sight/sound distribution. 35mm and 70mm widescreen prints of informative short subjects are being welcomed by the theater owner, *providing they are professionally produced and of real interest to this paid audience.*
3. Specialized channels, such as the well-developed Airport Cinema operation originated by Modern Talking Picture Service, and Resort Cinema, reaching influential group audiences during the summer (and winter ski) periods, have enlarged the available group audience.
4. The very important international audience has also been provided for through the facilities of the worldwide Inforfilm organization whose activities are described in these pages. From world headquarters at Brussels, Belgium, Inforfilm maintains contact with member companies throughout Western Europe (from Austria to Sweden) and has widened its influence into the Middle East, New Zealand and Japan.
5. College and university students are also viewers of well-made sponsored films. This

audience may well represent the most important groups of all as films help bring to a better choice of careers, improve corporate understanding and aid in instructional background on science, management, etc.

The economic impact of sponsored film and tape distribution is truly enormous. For laboratory, print orders exceeding 300, and 1,000 prints per single title, are becoming commonplace for 16mm color subjects. Each of these prints requires its own reel and shipping case. But the impact of these sight/sound subjects extends to continuous use of 16mm sound motion picture projectors, lamps, replacement, etc. And the appetite for *realistic* creative images is voracious: *this is the heart of the business for qualified, specializing film and tape producers* who must be constantly responsive to public interests and the demand for professional quality in both production and content.

How long has this been going on? Universal, one national distributor dates its development back to 1911 when pioneer George Zehn founded the "YMCA Motion Picture Service." Equally famed for the development of "mass audience techniques" is The Handy Organization, the first company to bring automotive-sponsored films to organized audiences. Modern Talking Picture Service, spawned by the Western Electric Company and its ERPI counterpart, grew into its present international scope under the guidance of the late Frank Arlinghaus. Columbia Pictures, merged into United World, is the active United World Free Film Service, an activity of Universal Education and Visual Arts. And under the public-spirited leadership of president Roger Cahaney, Stearns Movies, Inc. has helped expand the audience for sponsored films and tapes.

The remarkable thing about this great opportunity for American and overseas business is the comparatively low-cost of delivering a sponsored film message. An average 10-minute motion picture, for example, reaches its intended audience at lower cost than newspaper print media, taking into account the length of time/exposure to the message.

New forms of distribution will emerge. Super-8 projectors extend their influence into schools and among groups; as CBS Laboratories' VTR equipment is attached to home and group-owned TV monitors. But the present, with its millionfold viewers seeing sponsored films every day and night of the year, is sufficient to attract and serve industry. It is into this picture; it's tremendous and rewarding to the company, trade group or to any organization using these channels.

Vision Associates, Inc., 680 Fifth Avenue, New York City

AUDIENCES AND DISTRIBUTION TODAY

By LON B GREGORY
Editor

THE ROLE OF today's professional distributor is unique in that he serves as the catalyst necessary to obtain a reaction between the filmmakers' production and the intended audiences. Because of this, the distributor is in constant contact with the broadest possible representation of the general public. He is in the mainstream of opinion and therefore becomes the focal point at which data can be collected, analyzed, evaluated and he can forecast trends as they develop (many have in articles in this issue).

Though there are many new formats available to today's A-V communicator, 16mm and 35mm motion pictures remain the most widely accepted and in greatest use. The audience opportunities for these formats are divided into three segments: 35mm theatre audience; television audience and 16mm projector equipped audiences.

The theatre audience is an excellent audience opportunity for creative industrial films

— "creative" here used in its fullest sense since, obviously, the sponsored film is in an environment of highly creative use of the motion picture. (See page 32 for additional commentary on this subject).

A good entertaining short can run in theatres for several years, with a total audience running into millions. Theatre audiences comprise a first rate audience for the short (10 minutes or less) sponsored film. In terms of reaching a mass audience, it is second only to television. But, always remember the vital importance of quality production and entertainment value for theatre audiences.

Television

The total hours of free TV time obtained by industry is not recorded as are the relevant statistics for non-theatrical audiences. This writer estimates that the increases in the total hours of free TV time is declining and, further, that the rate of increase has dropped each year since 1964.

This does not mean that the total free time made available by television stations is formidable. In researching this article it was revealed that one distributor obtained a total of 14,000 hours in a recent 12-month period. The estimated audience for this time was over 500 million. Obviously, free TV time represents an impressive audience opportunity for industrial motion pictures and other industry sponsored visuals.

The point to be made here is that, for the past few years, there has been a gradual, but steady, increase in the amount of time local television stations are giving to local-originating programs. The effect of this has been to reduce, in some degree, the amount of free time available for quarter and half-hour free film. At the same time, it has opened up opportunities for shorter motion picture clips, both in a news and feature kind.

16mm Projectors

The technical mechanics of most industrial motion pictures continue to make progress

Continued on page

THEATRE AUDIENCES

There are 14,900 35mm theatres in the country today, including four-wall and drive-ins. Drive-in theatres represent about 4,000 of this total. These 14,900 theatres have a seating capacity of about 12 million and an average weekly attendance estimated at 40 million.

Of these theatres, some 460 are first-run houses, situated in 110 metropolitan areas of 250,000 or more population. These theatres are primarily located in upper-middle income suburban areas and in the downtown areas of major cities. Since the mid 60's about 75% of a new theatres (200 per year) are located in suburban shopping centers in these metropolitan areas.

continued

color, editing, excellence of production — an perhaps most significant of all — the decline of the “hard sell” has improved the image of these films. The classroom teacher, on all academic levels and in most curriculum disciplines, continues to demonstrate enthusiasm for the industry sponsored film.

The reason for this, I believe, is that teachers reflect a natural appetite for knowledge. This may seem to be a paradox in that most industry sponsored films are not teaching films but more “experience” films which support the process of learning. Yet they have earned a permanent spot in this very select environment.

Adult organizations have shown, on the other hand, some marked and variable trends. Well-organized groups, such as the leading civic organizations — Rotary, Kiwanis, Lions etc. — tend to be much more selective. A “good” industry film does not attract them as it did five years ago. Their involvement in their own programs is a principal reason. Another is their desire to come to grips with problems and challenges that characterize their own communities. Another is the growth of a “social consciousness” which has increased the significance of “message” films to them.

Other, less formalized adult audiences such as church groups and many membership organizations, continue to have a broad range of subject interests, so that the “industry” picture itself still has a potential viewing audience of several million. In the view of one leading industry figure, the sponsored motion picture audience “compares favorably in size with that of a successful entertainment-type feature picture.” This comment assumes that a picture is allowed to run its normal course of exposure which should be at least five years.

The trend, in this writer's opinion, that stands out most is that of the industry film sponsor seeking new subject areas to represent his company to the general public.

We do see evidence that some of our most forward looking leaders in industry are moving in this direction. It may even be truer of the young middle echelon management of today who will be the industry leaders in the near future. Tomorrow's executives may force business to finally give up its passive role in our society that has been traditional with it and as it gets involved and takes a stand, it will need more than ever to communicate its ideas and its attitudes, its programs and its results to the American public. There will be a new impetus, and a new energy to communicate. I don't know how much of this communicating will be entrusted to the sponsored film as we know it today, but if film makers utilize the business film potential — its immediacy, its impact, its convenience, its unexcelled ability to influence, the sponsored film will get its share and more.

PIGGY-BACK PROFITS

80% of your advanced slide projector customers need sound with their slides.

Sell slide projectors — sell sound too . . . and make two profits on most slide projector sales! Pro-Gramo® audio bases attach easily to Kodak Carousel® and fit 28 other projectors. Average profit is \$110 or more per sale. Using standard tape cartridge, auto-synch, hi-fi sound, solid state I/C electronics, Pro-Gramo advances slides automatically in “synch” with music and narration using inaudible cues. Unit GSA listed and approved for educational computer-carrell operation. Some profitable franchises still open. Interested? Qualify? Write: Pro-Gramo, Inc., 44 West 44th Street, New York, N. Y. 10036 — 212-682-3466

The Rivals.

That's an IBM 360-20. It is one of the tools we work with at Sterling. To keep up-to-date on print inventories and use-flow of the films we distribute. It helps control booking schedules. Makes sure clients get the reports they need to assess their entire film program.

He is a Sterling salesman. Creative. Hard working. Thoughtful. And he does what no computer could ever do. He helps to develop new and creative solutions for our clients' film distribution problems. The kind of programs that are typified in Sterling's Selective Audience Distribution. Professional Audience Distribution. Theatrical series like Cavalcade. Television series formats. And more.

Why then do we look upon our computer as a sort of rival? A matter of temperament, mainly. It doesn't have an ounce of business instinct. Doesn't really care about your film at all (a thing we regret deeply).

But the man does care. So do all the people who work together to feed the machine the information it needs to do a proper mechanical job.

Only at Sterling Movies. Where people compete with equipment to do a better job for you

PULL YOUR FINGERS OUT

Jane Senior reports on the British Industrial Film Festival where film makers were challenged to use their media to the greatest advantage.

Opening the British Industrial Film Festival was the first film ever to be made by a trades union — *The Inheritance* sponsored by the Amalgamated Clothing Workers Union of America, in 1914.

Commenting on the use of film for industrial relations, British government spokesman for industrial productivity, John Williams, pleaded with employers to use films rather than house magazines 'which no one reads'.

Said Williams, "film is a powerful motivational tool and should be used as such — and then hung up until it is needed again."

Scriptwriter Ted Willis, now a member of the House of Lords gave the following advice to employers, unions and film makers:

1. Film professionals should change their image and show themselves as responsible communicators who can play an important part in industrial communications.
2. Closed circuit television using motion pictures and video tape should be more exploited.
3. Regular programs of film pro-

duction rather than the occasional use of film should be regarded as an important feature of industrial budgetting, both for management and unions.

4. To obtain acceptance of the importance of film in promoting good industrial relations, there should be a planned campaign to get rid of the ignorance and mystique which surrounds the process of making a film.

Willis concluded with the direct, but non-aristocratic phrase 'pull your fingers out' — which is equivalent to the American "get off your fannies and get on with the job."

Forty-two films were screened at the three-day Festival attended by Britain's leading industrial film sponsors, producers marketing and public relations specialists. The motion pictures they saw were selected from an original entry of 170 films representing the work of 74 British production companies through 1968-9.

For the second year running Britain featured a special cate-

gory for films which have a direct sales objective, in line with the current trend in British sponsorship. This was the largest category, with an entry of 41 films.

Among them were films sponsored by the European divisions and subsidiaries of North American companies, including: *Focus on Value* (Caterpillar Overseas S.A.), *Micro-reproductions* (Oz-alid), *Take a Man Like You* (I.B.M. (UK)), *Who is this Man?* (Mobil Europe Inc.), *The World of Real Time* (Univac Division of Sperry Rand) and *Your Face is Your Fortune* (Alcan (UK)), *Fifth Era* (Parker Pen).

Discussing the use of film as an export sales tool, Lord Brown, Minister of State of the Board of Trade said that of the films which had been screened at the festival, ten were being used by the British Government to sell British goods overseas. Three hundred copies of these films were now circulating in 10 language versions — at the low cost of \$14,000.

The award winning films reflected the widespread use of films in Britain today.

In the public relations categories *Music* (National Music Council of Great Britain/James Archibald & Associates) and *Mullardability* (Mullard Ltd./Ronald H. Riley & Associates) proclaim British achievements in music and electronics for international audiences.

An industrial prestige film *The Curious History of Money* (Barclays Bank/Larkins Studios) not only won a Festival Gold Medal but the director, Beryl Stevens was honored by industrial film journalists as the year's outstanding creative artist.

Other films which demonstrated a high degree of communications in marketing were *Hallmarking* (The Goldsmith's Company/Kenneth Myer Productions) which will shortly be seen in U.S.A.; *One of Our Own Kind* (Vickers Ltd./Vickers Film Unit) — printing machinery; *Shellgrip* (Shell International Petroleum/Shell Film Unit) — a new method of road surfacing; *The Chequerboard* (H. H. Robertson (UK) Ltd/Robertson Film Unit); *Elegant Girl* (Vauxhall Motors (GM subsidiary)/Anthony Kilkison Associates) — launch of a new car; *No Ordinary Shower* (Walker Croweller/Rayant Pictures) — bathroom equipment.

In the training field, *The Behaviour Game* (Barclays Bank/Lion Pacesetter — Charles Barber) offered a new approach to the training of bank tellers.

Two awards honored films for specific purposes — the award for the best export film went to *Profiles* (high Duty Alloys/Ronald H. Riley Associated) designed with precision engineering at the award for the film which contributed most to the awareness of the contribution of science and technology to social progress went to *The Land Must Provide* (Shell International Petroleum made to show Shell's support of the F.A.O./Fertiliser Industry Co-operative Committee.

A still from "The Curious History of Money" made for Barclays Bank Limited in association with Charles Barker & Sons Limited by Larkins Studio in Association with The Film Products Guild Limited.

Lord Jackson of Burnley, FRS, President of Imperial College London and Past President of the British Association for the Advancement of Science, presenting the Science Award to Mr. Hugh Wickman, Shell International Petroleum Co. Ltd. for the film "The Land must Provide" (Sponsored by & produced by Shell International Petroleum Co. Ltd.).

Lord Brown, Minister of State, Board of Trade, presenting a bronze award to Edgar Anstey, British Transport Films for "Right Time Means Right Time."

If you're in a bind for lab service, Reela can bail you out.

When deadlines loom large, and you keep running into one delay after another, call Reela. Nobody offers faster service. And nobody will give you better quality work.

Reela's speed and high quality come about because of three things:

1. Competent, dedicated people.
2. Jet transportation, and an outfit that knows how to exploit it.
3. Sophisticated new equipment.

How many release prints do you need — 20? 100? Reela can make them.

Perfect. Sharp. Color-balanced. Back in your hands (or drop-shipped if you want) before you know it.

Why settle for less than the best? Call Reela now.

REELA OFFERS:
Complete editorial services • complete producer's services — animation — titling — sound • complete 8, 16, and 35mm laboratory services, including black and white or color dailies for Florida filming
• Super 8 printing and cartridgeing.

INFORFILM

INFOR

MOVING TOWARD COMPLETION of its 10th year of activity, Inforfilm, the International Association of Informational Film Distributors, now covers 20 of the most important markets of the world.

Since its conception, Inforfilm has learned a lot about sponsors and film distribution. Our main idea at the start was to provide sponsors a network of reliable distributors throughout the world.

But the facts were different. We discovered that in many countries this kind of distribution was not even organized. We discovered that a lot of sponsors were not even distribution conscious.

Developing the effective network now covering 20 countries was quite a job. Constant selection and adaptation gradually led to the international standards developed by Inforfilm, 20 countries. They are: Austria, Belgium, Canada, Czechoslovakia, Denmark, Finland, France, Germany, Great Britain, Holland, Italy, Japan, Middle East, New Zealand, South Africa, Spain, Sweden, Switzerland, Turkey, United States of America.

Some of them had to be promoted by Inforfilm itself since no suitable outlet was available. Complete new services were created in Austria, Denmark, Italy, South Africa. We have one major purpose in mind: to keep Inforfilm a high standard organisation and to progress surely but safely.

Each year the members meet together — early May 1969, the Inforfilm General Assembly was held in Copenhagen — exchanging experience and knowledge, concentrating on efficiency and on better servicing of the sponsors.

For sponsors' facility, all Inforfilm members have agreed to a unified international tariff of \$3.50 per booking, proved by an individual showing report completed by the borrower of the film. One tariff instead of all the different national ones. It enables the sponsor easily to survey his distribution effort, to calculate the cost per spectator, to compare the results of the different countries, to estimate his budget.

A second help to the sponsor is the General Secretariat in Brussels, Belgium, available to organise the complete distribution of sponsors' films in those member countries which are of interest for that particular sponsor.

What audiences can be reached through Inforfilm? Any audience equipped with a projector in all member countries represents a potential audience. This includes schools,

Reaching the leading worldwide markets with sponsored films is the task of Inforfilm . . . providing a potential audience of 650,000,000 persons in 20 countries.

clubs, organisations, military services, factories, resorts, etc. . . . adding up to a total potential audience of 650,000,000 persons. This means hundreds of thousands of bookings a year reaching people hungry for information provided by sponsored films.

And, in some countries, TV and theatre audiences can also be effectively reached. A quick check with the Inforfilm member in a country can determine this.

By organising Inforfilm, we hoped to reach each sponsor at his headquarters and his subsidiaries in all member countries.

Again, the facts were different. Quite often there was no money allotted for a film's distribution. We even found some sponsors believing that once they paid for the production of a film, audiences would pay to see it.

The best way to have films distributed and seen is to make sure yourself that they are. We in Inforfilm think that it is in part due to our action that more and more big companies come to entrust their film distribution to independent specialists we offer.

Many companies already guide their subsidiaries and representatives to contact these specialists. Some companies even do it them-

selves and also centralise the payment of the distribution in view to get a well coordinated and fully efficient job done which they entirely can survey and control.

Inforfilm has one member per country. Why? Because film borrowers prefer to dispose of one main source for getting films. And because concentrating a big choice of film at one place means that the borrowers will concentrate their interest there.

To work with Inforfilm means to use the biggest available instrument to bring your film to non-theatrical audiences and to get proven results. Work with Inforfilm means to work with an international group of people bringing their experience and knowledge together further the cause of providing audiences with business films.

And since distribution is a close collaboration between sponsor and distributor, Inforfilm is awarding yearly, at the occasion of the International Industrial Film Festival in Europe, an INFORFILM Award to a film best suitable for international distribution.

Those are only some of the facts about Inforfilm, because you cannot generalise distribution. If the instrument is always the same, the films are different and each film collection, each film needs the special knowledge and experience of the distribution specialist who even can advise already in the production stage.

After 10 years, the Inforfilm idea has become a success. More and more official organisations and state authorities have gone to Inforfilm for the distribution of their film collections.

INFORFILM members during a panel discussion of film distribution earlier this year in Copenhagen

BEEN TO THE FOX THEATER IN PHILLY LATELY?

Or the Randolph? Or the Stanley? Or the Trans Lux? Or Eric I & II? Unless you've been to one of these key motion picture theaters very recently, we know something you don't (but should).

There's something new and important happening to PR film distribution in movie theaters all over the country. Sure, some movie houses have always shown free films, but today, it's a whole new medium.

Take what happened with one of our clients a few weeks ago:

In just four short weeks, over 136,000 people in the Philadelphia area saw (and loved) a beautiful 13-minute PR film as part of the program at their favorite movie theaters.

Our film played all through the market, including a number of big, downtown houses like the Fox, which had **never used free films before.**

How come? It's really simple. As more and more of the major presentation houses go to

one-feature bills, they need more short filler subjects to stretch out their programs. Because so few short subjects are being produced today, free films have become a very important source of program material for these theaters.

The biggest and best of them are suddenly joining the parade in a very big way, and delivering **measurable** audiences for PR films at cost efficiencies that are almost unbelievable.

The Fox, for example, played to 56,750 people during those four weeks. The total cost to the client was exactly \$38.00, which comes out to **six one-hundredths of a cent** per viewer!

Now that it's so easy to convert your 16mm PR film into the 35mm format the movie houses require, there's no reason why you can't enjoy the same bonus audiences at the same low-cost efficiencies for **your** film. If you'd like to know more about reaching this "new" distribution channel, just call the man from United World.

Rent an NPR: see if you get more shot in one day.

Sync sound without a blimp and five-second magazine changes aren't built into the NPR just to make life easier for the cameraman. He's getting paid anyway. It's the *producer* we care about. The NPR makes life cheaper for him because he's able to get more shot in a day. Shooting sync sound is just as easy with the NPR as shooting silent. And sync sound effects save editing and dubbing time.

The NPR lets you spend the day *shooting*, not setting up. It weighs only 21 pounds with Angenieux 12-120 zoom lens and 400 feet of film. You can climb a tree with it in one hand, like a briefcase. The rotating turret will accept any two lenses you

like. And since they're not inside a blimp, you can get at them fast. The magazine is threaded when you load it, before shooting starts. Changing magazines takes five seconds, and you don't need to touch the film.

The NPR needs no blimp, no AC power and no clapstick. It uses a battery operated constant-speed motor with a sync-pulse generator and an automatic clapper. Moving the NPR and tripod from one studio setup to another is a fast one-man operation. Try that with a 70 pound blimp. The NPR's precise reflex viewing lets you see what's just off-screen in the viewfinder. No more microphones getting into the shot.

If you are a producer, you'll agree there's something in our claim that this spontaneous camera is liable to pay for itself quicker than most. If you are a cameraman, try renting an NPR for more good first takes. The producer might think it's you.

For a free copy of the NPR brochure, just contact Eclair at 7262 Melrose Ave., Los Angeles; (213) 933 7182. Or at 18 West 56th Street, New York City; (212) 247 0350. No obligation.

motion picture cameras since 1909

"IT'S IN THE CAN" is an expression used by film producers to indicate that a motion picture sequence, or indeed the complete motion picture is all wrapped up, completed, "in the can." So — now what?

A lot of good it's going to do you, your target audience, or Actor's Equity to leave here. But stay there it might, except for occasional viewing by "JB upstairs," those of you who conceived, labored and delivered and/or the producer who, when selling a prospective client says, "Here's the film I did . . ."

Impossible? Well, if you look around, and you could find somebody to admit it, you'd find an above statement more truth than fiction.

How does it happen? — Case in point. Let's say you have produced a film and it's in the can, and your target audience lies outside the structure of your own organization. If you've not talked to a distribution professional long before now you will have made your biggest mistake — you're six months to a year late in contacting a distributor.

This business of developing motion picture programs . . . or should I say talking picture programs . . . there's nothing these days that as an audio-visual communications tool has to be on celluloid, or have emulsion and sprocket holes. Videotape, EVR, and whatever is just around the corner are all "talking pictures," all communicate, in their proper place as well as film and should be considered on their merit. But we digress.

This business of creating audio-visual communications tools is analogous to building a 3-sided pyramid, the pinnacle of which, for all you see, will be your completed program. Its success, how well it holds up, and who sees it will depend upon the support that's been built up to it.

The supporting sides of your audio-visual program involve *three* areas of expertise which must be consulted before any communications tool will predictably succeed. Obviously the first side is your own, what you know your problems in communications to do with whom they exist, and *what* it is you'd like to say in an attempt to solve those problems. In analyzing your own situation then, you decide that "maybe a motion picture will assist in solving this problem." So you call in the second expert — the producer. These people, chosen wisely, are skilled in the art of taking what it is you have to say and translating it into the language of audio-visuals. But please don't stop here, because in actuality all you've done is identified a problem, a possible means of solution, and hired a translator — a very creative translator, granted — but a translator. At the very moment that you begin a dialogue with your producer, you should also begin a dialogue with a distributor. And the logic of this step is irrefutable.

You're at a decision point, and in order to properly make the decision whether or not to proceed with an audio-visual communications tool you must determine:

► can the target of my communicate be reached via films? (If the answer to this question is no, you've found it out at a

Continued on page 26

IT'S IN THE CAN — NOW WHAT?

Editor's Note: Business Screen opens its special report on audiences and distribution with the following article on proper planning for reaching target audiences. On the following pages, the broad realm of film and audiovisual distribution is examined in depth by the specialists who know audiences and how to reach them. Though one theme is repeated often on the following pages, it cannot be reiterated enough . . . and that is that proper advance planning for getting your message seen by the right audiences is as vital as all other phases of production.

Account Executive
Modern Talking Picture Service, Inc.

ARRIFLEX[®] 35 digs in to score for Harry Hamburg's V-8 Cocktail Juice Commercials

V-8 Cocktail Juice wanted to present themselves as the 'different' kind of drink . . . and so in doing, gave Harry Hamburg Productions, New York, a wildly different kind of assignment.

"The central theme," writes Harry, "involved a typical American family living in a 'rut' because they all drank the same old breakfast juice. After trying V-8 they came charging out of their ruts, ready to face the day."

But most producers would have required a more potent beverage to face the day that shooting began on the commercial series. "The logistical problems proved to be unbelievable. Ruts—holes 15 feet square and 9 feet deep, had to be dug in the loveliest neighborhoods we could find, in California, New York and New Jersey." The problem, of course, was how the neighborhoods might react when they found Harry, his crew and equipment, the cast, a couple of steam-shovels and a bulldozer or two on local park lawns. It was a situation requiring exceptional tact on Harry's part, and failing that, exceptional speed.

"We often started shooting before the holes were finished, and started filling in while we were still shooting. Have you ever tried to be creative with irate citizens breathing down your neck? And how do you keep a white tablecloth white with those machines spewing earth and dust all over the place?"

Harry recalled, "with location problems, tight shooting schedules, difficult angles and uncertain weather, the only thing that didn't give us trouble was our camera. We exposed 55,000 feet of color film for the 30 second commercials. The Arriflex 35-2C was chosen because it's always been our favorite—for portability, bright reflex viewing, quick-change magazines and exceptional all-around operating convenience."

In view of the traveling, and the many elements he had to coordinate and transport, Harry could allow for only one camera—that he chose an Arriflex was typical. Because cinematographers the world over have come to trust Arriflex for critical 'one chance' shooting in every kind of production, under all conceivable conditions. Its mobility, unique in the 35mm field, is one major reason. Its ability to adapt from a hand-held 'wild' camera to a complete blimped studio-sync-sound system is another. Its A-Z capability has helped users all over the world avoid getting stuck in a cinematic rut.

WOODSIDE, N.Y. 11377 **ARRIFLEX**
CORPORATION OF AMERICA

Camerman - Mario DiLeo

it's in the can — now what?

continued

very good time. You've invested very little time and absolutely no money. If the answer is yes, then you know you're on the right track.)

- ▶ If yes, in what numbers can they be reached?
- ▶ Where are they? and,
- ▶ what's it going to cost to reach them?

Only a distributor can answer these extremely important questions in detail, and in such a way that you may proceed in full confidence that a motion picture is going to aid in the solution of your difficulty. Look at your plans for a motion picture and its distribution in terms of a package, and before you commit any funds for anything "get to know the territory."

An added advantage to proceeding in this fashion is that you will also know *all costs* before you begin. The producer, once he knows

exactly what you have in mind, can quote a production figure. The distributor, once he knows whom you want to reach and in what numbers, can quote costs for that service. This answers question #4 stated above, and tells you right away whether or not the solution to your problem is worth solving via films — or perhaps worth solving at all.

Actual distribution, of course, cannot take place until ideas have been generated and approved, the script written, the cameras turned, the film processed, cut, edited, the track conceived and executed, etc., etc., etc. However, this purely chronological fact does not remove the function of the distributor from the early creative stages of the motion picture.

Once the four above-stated questions are answered, and the medium of film has been chosen, then you must ask other questions which are far more theoretical, but no less important.

- ▶ Is film treatment idea "A" more effective than film treatment idea "B" in reaching our target audience?
- ▶ Will this idea reach our audience at all?
- ▶ Will it "grab" them? (Or in present day vernacular — Is your "thing" gonna be their "thing" baby?)
- ▶ Which approach will be more acceptable to TV?
- ▶ Neither?
- ▶ Why?
- ▶ What can be done to make it acceptable to television?
- ▶ Theaters?
- ▶ For international distribution?
- ▶ What running time is best for my audience?
- ▶ For TV?
- ▶ For theaters?
- ▶ What "spin-off" audience can also be reached which, even though they're not the main target, are valuable and would help amortize the overall cost of this project?
- ▶ What other films have already been done on the subject?
- ▶ By competitors?

Obviously questions for people who deal in motion pictures and their audiences, people whose only reason for existence in the business world is to assist companies such as yours in communicating efficiently and effectively with the general public or segments of it. The answers to these questions are vital to your planning and ability to fulfill your responsibility to your organization.

Effective tool

The motion picture (or talking picture, depending upon the physical format selected) is without a doubt, and has been proved to be the most effective communications tool —

when used properly in attacking a clearly stated and specific communication objective. There is little doubt that Eastman-Kodak is entirely correct when they say "Movies Move People." (The title of a brochure available from Kodak.) But they quickly go on to say (and I guess a lawyer would call this admission against interest) ". . . but is a motion picture the best way to do it?" And we must go on to ask, even if the answer to that challenging question is yes, is it the *only* way to do it? The same question must be asked of all potential media as well!

Any medium must be proved effective before it is considered for any share of your communications budget. The most successful communications campaigns, be they centered in public relations, sales promotion, advertising, marketing or merchandising, are those which use a well balanced, carefully thought out and coordinated attack via several media.

The Fifth Medium

Film is the fifth medium — not fifth in importance, it is the situation that dictates the value of the vehicle. Fifth, unfortunately, is that many businessmen think of motion pictures only after they think of newspapers, magazines, radio and television. But a survey of modern day communications will show immediately that motion pictures are a primary method of business communication, and their use is constantly on the increase. Therefore the motion picture must be considered equally on its own merit as a full and equal partner of newspapers, magazines, radio and TV.

Case histories are not hard to find, nor are they confined to any one industry or area. They include automotives, breweries, distillers, educational and charitable organizations, associations, governmental agencies and religious organizations. Many campaigns are built around a motion picture, but an equal number use a motion picture in support of other media. It all depends.

Keep it out of can

The real challenge is to keep your film out of that film can and in a projector. A good film is no good until it's seen, and getting it seen is as big a challenge as getting it made. When those challenges are successfully met, you will have created one of the most exciting, effective and efficient communications tools that it is within your capabilities to create. A tool of great emotional impact, which utilizes the combination of sight and sound, thus producing memorability — a tool which (except on TV) counts every viewer after isolating them in a controlled environment for maximum attention potential and concentration — and a tool which carries with it a built-in prestige by virtue of the fact that you have used a "glamorous" and *apparently* expensive medium.

You're not going to cultivate a good film program by scratching your head. Call in the experts — the producer — the distributor. Make them "sell" you on the merits of solving your communications problems using motion pictures (excuse me — talking pictures — we've come full circle). If you've never done this, I guarantee you'll learn something!

ABOUT THE AUTHOR

Ed Swanson, Chicago account executive for Modern Talking Picture Service, Inc. entered distribution work with Modern in 1965 with a background in both film and TV production. In 1960-61 he was a director of a Ford Foundation closed circuit television experiment and taught television production at Northwestern University during the same period. From 1961 until 1965, he worked in both production and sales for Gilbert Altschul Productions. For two years he was responsible for production coordination within the organization, and later served as an account supervisor prospecting, selling, and producing audiovisual aids for Altschul accounts.

PROFESSOR DOOLEY once remarked that he wasn't sure whether people make things change or "whither it's just a matter of smart people takin' credit for the good things and passing on the blame for the others."

There's a general undertone of agreement that things are changing in the industrial film business, but little agreement as to just what they are or why they are happening.

As usual, the fellow who is happy with things as they are can be depended on to say there's nothing really going on. He might well be wrong, but he's at least comforting to live around. It's the fellow with the antenna aimed to the future that we all have to watch. He feels every shift in the wind, even when there's just a mild breeze blowing. The trouble is he can't pinpoint directions. There still doesn't seem to be any.

What makes this question so tantalizing to a distributor is that we're inclined to think we have our finger in the wind more than anyone else. Assuming the truth of the old saying that producers don't talk to each other and film sponsors talk only to God, consider the film distributor for a moment.

He talks to everyone, for the expedient reason that everyone seems to influence his business. He screens scores of films each week, more often than not under the burden of passing judgment on them as to their effectiveness. He has responsibilities to himself and to his clients require that he also check literally thousands of comments from audiences. It's a fairly simple exercise in computer logic to juxtapose comments and film, so that by doing a little more than using his eyes the film distributor becomes an authority on the subject that finally motivates all of us: the audience.

With credentials like these, it doesn't take much courage to offer our own view on the question of changes taking place in our industry. Courage aside, it needs to be done for no other reason than everyone else is doing it. The general upheaval in almost all of our social disciplines has everyone — government, educators, artists; experts familiar and new from sociologists to ecologists — trying to fathom today's topsy-turvy so that they might speculate where the future will take them.

Finally, if any further reasons are needed, there seems to be a reluctance in the field to publicly speculate about such things, and some of us feel it's time to do something about it. Professor Dooley's uncertainty about how changes take place has more than a little relevance to the industrial film business. Yet there are certain clear evidences of change that we can all agree to. The least questionable one is that industrial films, considered their special identity as a creative/technical product, have been improving in quality for a good many years. Today, the outstanding creative/technical film is a fairly frequent occurrence.

Another developing characteristic—although not yet widespread—is that films are being targeted toward audiences on a preferential basis, so that selectivity among audi-

OUR CHANGING AUDIENCES

ences is becoming a major consideration in the production of films rather than an afterthought, as it has been for many years. As proponents of selective distribution for many years, Sterling Movies sees this as a positive change, one that carries within it the hope of more purposeful use of film as a communications tool.

This is by no means a thought that will win common assent, nor does it need to. There is, and will continue to be, a place for the shotgun industrial film that is designed, because the interests of the sponsor so dictate, to reach as many people as possible with as many prints as possible. If there is a point worth quibbling over here, it is that so long as the shotgun film is generally accepted as the best representation of the industrial film, there would seem to be little future for it except to turn out a better creative/technical product.

On the other hand, there is a refinement in the use of the industrial film—and a corresponding growth—if it continues to be recognized as a tool that can be brought to bear on a broad base of business problems and opportunities. This would seem to fall in line with the accepted idea that corporate public-relations today is a matter of relations with

many publics. The notion that a single film can adequately represent a corporation is yielding to a more scientific pursuit of film, of the publics that are known to be out there, with all their differences intact.

It is precisely these "publics" that are at once the source and the inspiration of much of the feeling that the industrial film is in a stage of transition. None of us are so far outside the mainstream of public-relations, (or even marketing) that we don't share in some degree an awareness that different audiences need to be approached in a way that expresses an appreciation for their differences. This point goes beyond argument where a special-interest film (designed to serve a company's recruitment program, for instance) is involved. But to maintain that today's public audiences are different only by classification (students, shareowners, housewives, etc.) misses the point.

The point is, I believe, that today's audiences are *different in their roles as viewers of industrial films* than they were just a few years ago and, in all probability, they're changing all the time. One of the truly hoary old chestnuts of our business is the phrase, "Audiences are more sophisticated today." Assuming this is so, what does it mean? It can mean a lot of things that are no more clear than "sophisticated," such as "discriminating." Yet they are that, too. Our records clearly show it in a comment that appears all too frequently on the audience-report cards we receive: "Not suitable for our audience."

Perhaps I only add to the general obfuscation in trying to wrap up a complex situation in a single word. But it often seems that audiences today are more *demanding* than they have ever been. And it's not too difficult to understand. Two generations of Americans have been weaned and have matured along with the sight and sound media—television and the entertainment motion picture. American audiences have had ample time to learn what they like in motion pictures and what they don't like. It has been said that one cannot compare the entertainment motion picture and the industrial film, yet we show our films to the same people. Our purpose is not to make an audience laugh or cry, but we must capture and hold their interest no less, and even create an emotional response, if we are to be successful.

Both motion picture and industrial film are an emotional media before they're anything else. It may well be that the industrial tradition of addressing a *message* to an audience on film is going out of style.

Or put another way, it may well be that the technique of using moving pictures as an emotional tool in support of a sponsor's *rationalized* message is no longer effective, because it is a pairing that fails to move people. It may well be that the industrial filmmaker will look ahead best if he searches not for better ways to make films in the same mold, but to explore altogether new ones. In any event, there is enough evidence of change in audiences' reactions to suggest that we in the industry ought to make an effort to catch up with them. •

President
Sterling Movies, Inc.

PLEASE...

DON'T SAY DISTRIBUTION!

By ROBERT FINEHOUT
Vice President
Association Films, Inc.

FOR AN INDUSTRY founded essentially as a photographic art form we are singularly bereft of creativity when explaining what we do. What, for example, could be more negative or apologetic than the term "non-theatrical"? Why not call a plane a "non-auto"? Or a buggy a "non-horseless carriage"?

Take the word "distribution." (Please!) What word in the motion picture lexicon is so restrictive, unimaginative and, really, so imprecise? If film distributors are to survive in the communications market place we had better excise the word from our thinking and glossary of terms. At least we had better euphemize it to mean more than just the shipping of prints.

We are no more just a "distributor" than a TV station is a signal sender or an advertising agency an ad placer.

The railroads learned to their dismay that — the mystique of "high iron" notwithstanding — they had better get into the transportation business, be it truck, trailer or piggy back. They've containerized, palletized and computerized in an effort to compete. And, as the final gesture, the venerable steam engine has been cashiered to some happy Valhalla designed by Disney out of an idea by Lionel.

The motion picture distributor is, or should be, a total entity in communications. He may not in the final analysis create the product — film, filmstrip, videotape or integrated teachers kit — but he *should* be the stimulus behind the materials.

Because our job is one of delivering messages to the desired publics — as effectively and efficiently as possible — we are apt to cast ourselves in the exclusive role of traffic expeditors. While we may use United Parcel Service to meet a showdate we are not a delivery service as such. Rather, we are a full service industry, or we had better hurry up and become one!

Frequently the driving forces behind change and expansion of services come from the desires of clients and the unpredictability of audiences. Many sponsors with highly-specialized films rightfully insist that a distributor seek out new ways of reaching a target market. Within the past few years traditional methods of distribution have been vastly augmented by innovations that in themselves have done much to obsolete the word "distribution."

Among our more recent marketing concepts is *On Campus Sponsored Film Services*, developed by Association Films to help spon-

sors reach the elusive, but highly-desirable, college market. By their very nature most sponsored films do not qualify for in-classroom use at the college level. They are not — and are not intended to be — teaching aids in higher education. How, then, could sponsors tap this rich audience lode?

On Campus seemed to be the answer. The plan is really quite simple: employ student representatives who will show college-acceptable sponsored films in non-classroom situations. We launched *On Campus* last fall on some 50 college campuses. The representatives, working under our aegis, were loaned brand new 16mm sound projectors and screens, provided with promotional materials and given a *modus operandi* for contacting student leaders and setting up programs.

By June we were reaching 25,000 students a month in fraternity houses, sororities, dorms, social clubs, student unions and other places where collegians meet for relaxation and fun.

Distribution? Perhaps, better, just one of the many roles we must play if we are to reach one of the most challenging, questioning, idealistic, and influential audiences in the country. There are seven-million college students enrolled today. Their numbers understate their influence on our times.

The need, increasingly, is to mobilize our business, that is to take the story to the audience, not just sit back and wait for the morning mail to bring a raft of film orders. (As the disc jockey said, "Keep those cards and letters coming, folks.") Businessmen — traditionally a difficult segment of the total audience to reach because of the demands on their time and leisure activities — are now within range of sponsored films via such innovations as TravelCinema, the network of 16mm "theaters" in air terminals. According to the airlines, about 70% of all air travel is by businessmen. On-the-ground delays — a natural by-product of this burgeoning industry — have made TravelCinemas attractive oases in busy terminals. Sponsored films are shown continuously in waiting areas and adjacent to in-terminal attractions for the convenience of travelers awaiting flights.

Sponsors not only reach air travelers with films but through off-screen identification as well. The sponsoring company's name appears near the screen as the film is shown. Convenient materials display racks are located within the TravelCinema area. These are well-stocked with sponsor brochures, information cards and other point-of-sale items.

Distributors can't be content, however, with merely finding a better way to get a

sponsor's story to particular public, no matter how innovative or imaginative the methodology used.

It is estimated by reliable industry sources that just under one million (997,000 to be exact) 16mm sound projectors are in use in the United States. Of these, some 224,000 are being used by business and industry for training, indoctrination, motivation, etc. In spite of wide acceptance of 16mm by industry, we felt that there was an unrealized and unusual opportunity to reach adult audiences, especially in remote industrial park complexes. Desirable as these plant locations are, from a standpoint of natural aesthetics, employees (at all levels) do not have much opportunity during lunch hours and work breaks to get away from in-plant surroundings.

On the boards and ready for fall inauguration is a new concept, *Investors Cinema*, to be comprised of films of particular interest to securities analysts, investment clubs and other groups interested in investments and finance. The films will be offered in several unique ways.

A flourishing new Association Films' activity is AF/35, our theatrical division responsible for placing sponsored shorts in motion picture theaters. The films in our show subjects portfolio range from a period music with *Seven Brides for Seven Brothers* overtones to a superbly-photographed mood piece on the manufacture of the Bible. We have found, too, that fashion shorts are very popular with exhibitors, perhaps because of the demise of newsreels with their inevitable fashion segments. A 4½-minute Fieldere fashion reel is heavily booked in hardtop as well as drive-ins all over the country. We anticipate that theatrical playdates will greatly increase because of the impressive "show casing" a sponsored film gets, the unusual large audience per playdate (2,500 to 3,000 persons), and the fact that movies are still *in thing* with the younger generation who comprise 50% of today's population.

EVR, VTR, ITV — are sophisticated new ways of reaching audiences. The array of hardware available to communicators is awesome and mind-boggling. None is yet the panacea, the magic communicator that will make obsolete existing methodology.

What is important is the development of total programming — distribution service that will make what sponsors have to say valid, useful and memorable. Heretical as it sounds, a sponsor's message may *not* be best told with films. For that matter, our industry has unnecessarily been stultified by dogma and tradition. For example many have come to believe that what's best for TV is okay for all. Hence the 28-minute, 14-minute, 5-minute yardsticks. Did anyone ever buy a painting by the yard or a book by the number of pages?

Suppose, just suppose, for school purposes your story could be told in eight minutes. Why then make it 14? Or, to put it another way: Why shouldn't we make films for various media, longer ones for TV, 10 minute versions for theaters and colleges, 20 minutes for clubs and classrooms?

Part of total programming is the development by distributors of conceptual packages at meet the needs of *audiences*. The distributor must find out what is really needed this fast-changing, shibboleth-challenging world of ours.

Our recently-completed Consumer Education survey was a revelation to us. We found it, for example, that this subject area is far more widely taught and in many different curricula than we had ever imagined. The 1,000 teachers we surveyed told us what kind of equipment they use, what kind of mate-

rials they need, and how many 16mm films they use every month (41.6% show three to 10 sponsored films).

Like most surveys, statistics tell only part of the story. Twenty-five per cent took the time to tell us *in their own words* what they want and how they feel about Consumer Education. Out of these written remarks we have developed the idea of offering teachers a *Consumer Education Resources Service*, a single source for sponsored films, filmstrips, study guides and other non-textbook aids.

This survey, and others we have in prepara-

tion, will make it possible at last to find out how we and sponsoring companies and associations can meet specific requirements with *total* programs that provide meaning and substance. And, after all, isn't this really the name of the game? To serve a purpose by fulfilling a need?

Distribution? Better a total service that will meet the need and reach the audience in the most efficacious way possible. Perhaps communicators is a better term for us distributors. To paraphrase McLuhan the message is *still* the medium. •

WHEN THE MEN of the distant future—sages all, perhaps, living in some golden re- nity—look back at the twentieth century, they will see an age of enormous change.

They will see that the world changed more dramatically in our century—even in its first 9 years—than in all the preceding nineteen centuries since the birth of Christ.

They will see us torn by two great world wars, unlocking the awesome energy of the atom, making great medical breakthroughs, wrestling with the population explosion, discovering the computer and putting it to work, and venturing into outer space.

But the most affecting development of all, I think they may say, was the audio-visual medium of television.

This was the great invention that brought knowledge to all people everywhere in a new and immediate and vivid way.

The invention that has already permeated our society—and yet has just begun to show its influence. For only now, some 18 to 20 years after its introduction, do we have a generation that has *grown up* on television, and has known it all its life.

It has been estimated that the average child today sees 15,000 hours of television by the time he graduates from high school . . . and 5,000 hours before he even enters kindergarten!

However precise those figures may be, it is obvious that the child of today, at a very tender age, is flooded with information that he receives only as adults. And that tender age, we know, is the receptive age, when the mind soaks up information like a sponge.

The influence of television is surely one reason for the dramatic increase in the use of films in schools. (In 1942, Modern Talking Picture Service distributed 28 sponsored films. Today the number is over 1,500.)

As Newsweek put it, "The beauties of new classroom films can be seductive to a whole new army of kids that travels on its eyes."

And what will happen now that the teachers themselves are those kids of the television generation grown up?

Advertising men have discovered that you can communicate faster in film now because people can read it faster. That's the influence of television commercials, which everybody sees—and in which filmmakers are challenged to say everything in a matter of seconds.

THE AUDIOVISUAL KNOWLEDGE EXPLOSION

Some old filmmakers have known this potentiality of the medium for a long time. Orson Welles has said, "I believe that films should be able to tell a story quicker than any other medium."

Film is frequently referred to as the "in" medium of today, the twentieth-century art form and so on. It has been enjoying a remarkable renaissance in theatres, at international expositions, with community groups and "undergrounds," as well as in the schools and colleges.

Life magazine put it this way: "The U. S. has bred a generation zonked on films."

A recent survey by the American Film Institute showed that 219 institutions of higher learning now have film courses, an 84%

growth in the last five years; that some 5,300 students are preparing for a career in film production, scholarship or teaching; and that tens of thousands of other students are taking elective courses in film history, appreciation or production. Imagine the influence these young people will have on communications when they become teachers, advertising men, engineers, politicians, preachers, parents.

Television is a motion picture medium that has dramatically helped film rather than replaced it . . . and film in turn has helped television. I expect to see the same effect from the newer media and formats, such as video tape, Electronic Video Recording, 8mm and super 8mm.

We are also witnessing a development of new outlets or showcases for the motion picture image: airport theatres and college campus cinemas for sponsored films, demand screenings of educational films in university libraries, a magazine motion picture projector for quick random access and computer assisted instruction.

And as equipment provides the vocabulary of film, that vocabulary is growing. It is only recently, for example, that we have had equipment light and flexible enough to enable us to observe and record with a minimum of interference into what's going on.

The effects of technology on film style and an indication of some of the new directions film may take are summed up very interestingly in "The Shape of Films to Come," one of Union Carbide's TV show-films.

If the men of the distant future are indeed sages all, won't it be because we brought them knowledge? And isn't part of the future's "knowledge reservoir" being filled by today's sponsored film? Millions . . . student and adult . . . would answer in the affirmative. •

By CARL H. LENZ
President, Modern Talking
Picture Service, Inc.

By **ALAN ROBERTS**
Director, United World
Films Distribution Services

THE SCENE IS the Board Room of a large corporation. The occasion, the final review of the next marketing program. The Public Relations Director speaks:

"Gentlemen, here's how our new film fits into the marketing plan. We'll reach 5 million viewers in the top 40 markets within the next 120 days. We've already arranged with the Sales Department for local tie-ins in key markets. And our average cost per viewer will be a half-cent apiece. Here are the facts. . ."

Surprising as it may seem to some members of the sponsored film distribution industry, the above is an accurate description of what the business is all about today.

We do have the facts. We do have the advance-planning capability. And we do have a new, more effective relationship to the company's total marketing effort. The good old days, with their casual, "show-biz" approach to film distribution, are gone.

Of course, sponsored films aren't a new marketing tool. What is new is how fast we've

the numbers of viewers to be reached, or the cost of reaching them. Nor was there any efficient way to coordinate the film's use with other company marketing activities.

As a result, the same Advertising or Public Relations Director who was able to present fact-filled, tautly drawn plans to his management when it came time to present advertising budgets, found himself in the unhappy position of seeming to ask for a blank when it came to producing and distributing a new film or continuing distribution of an existing one.

Not surprisingly, management was often less than generous in its budget allocations for sponsored films, if budgets were approved at all.

Each film must still be considered individually. Just as one advertisement will out-pull another in the same medium, a given film will generate better or poorer results depending on its quality, timeliness, length, and similar factors.

However, assuming that these criteria are met, we are now able to apply many of today's market planning techniques to the development of a distribution plan which provides management with the same type of advance data as the advertising plan.

our budget in advance for the concentrated impact required.

- We can plan to "blitz" a city, county, state, region, or the entire country, as needed.
- We can plan to pinpoint one market where a special promotion might require special coverage.
- We can plan to target our message at or those demographic groups which fit our marketing profile.

In short, sponsored film distribution has matured into an efficient, measurable medium capable of truly supporting the total marketing effort, and capable of providing management with the advance numbers on which to base its decisions.

Movies Are Better

More and more, today's motion picture theaters are showing one feature film, not two. Because they need to stretch out their programs, the demand for short filler material has increased greatly. And since few people other than the PR film producer are making short subjects today, a new theatrical opportunity has developed for PR film distribution.

Improved techniques now enable us to make a simple conversion from 16mm to the 35mm format required by movie houses, without sacrificing quality.

As a result of these developments, there has been a dramatic increase in PR film use in movie houses throughout the country, including many who had never used such material before.

For example, the Fox in Philadelphia, one of the country's best downtown houses, has just used sponsored films for the very first time. They're delighted with the results, and what a bonus the sponsor is getting!

During a recent 4-week period, the Fox played to 56,750 Philadelphians, who saw through a beautiful 13-minute film by Lenora China, and loved it. The total cost to the sponsor was exactly \$38.00, which comes out to \$.00069 per viewer, or less than 70¢ per thousand!

Movie theaters throughout the country are playing sponsored films in record numbers. In one 4-month period one client enjoyed a total national movie theater audience of 5,054,000 viewers at an average cost per viewer of \$.00494. Another example, covering just one month, covered 1,965,055 viewers at an average cost per viewer of \$.00366.

It's also interesting to compare the manner in which theater-shown sponsored films are viewed, compared to other forms of advertising messages. While a newspaper or magazine may guarantee its circulation, the really isn't much they can do about actual readership of a given ad, or even prove that every reader saw that particular issue.

By contrast, every movie theater audience is measurable, right down to the last individual. Sitting in the darkened theater without distractions, they are also far more receptive to our message than they would be through other media.

With our newly-found capability to precisely schedule play dates at local theaters, new tie-ins with local dealers are now possible. Cross-

DISTRIBUTION'S NEW MARKETING LOOK

learned to understand and speak management's new, marketing-oriented language.

Film budgets and distribution costs are no longer accepted as a vague, non-accountable part of the company's total effort. Management today views its PR film investment in exactly the same, hard-nosed manner as it views its other marketing investments, such as advertising. And so we've learned to develop and provide the same data as advertising, to enable corporate planners to evaluate PR films more effectively.

Defining the Problem

Since business itself is numbers-oriented, advertising quickly became numbers-oriented too. We are accustomed to buying advertising "by the pound," so to speak. Newspapers and magazines sell on their ability to reach a specific demographic segment efficiently, at so much per thousand readers. We buy TV time by the rating point.

Whether or not the numbers eventually prove to be accurate, they are available in advance of the expenditure, enabling market planners to document to top management how their recommended advertising expenditures and media strategy would fit the marketing objectives of the company.

Sponsored films have never before had this in-advance number capability. Each new film was an unknown quantity. There was no plan. There was no way to anticipate accurately

We begin by starting earlier; much earlier. This in itself is a radical departure from the good old days when film distribution wasn't even considered until after the film was "in the can."

Now, with an understanding of the company's marketing goals, we are able to custom-tailor a distribution program very similar to the advertising media program.

● Where advertising identifies specific publications or broadcasters, we identify key distribution channels such as schools, clubs, TV studios, or movie theaters. With the advent of the computer, our ability to maintain continuing data on our "media" has increased by quantum jumps.

● Where the advertising schedule calls for specific insertion or on-the-air dates, we are now very often able to schedule similar play dates *in advance*. Not only does this tell management exactly where and when the film will be seen, but by whom, by how many, and at what cost. This is particularly true in the theatrical distribution area, which will be discussed shortly.

● Additionally, since we can now plan specific play dates, we can also plan local tie-in promotions with participating company dealers. And we can budget for that in advance too!

● If the company's program centers around a specific time period, such as an anniversary, a sale, or other special promotion, we can plan

displays, with product on display in the theater and movie posters on display in the store windows are an effective plus which can now be added to the marketing effort. Depending on how much lead time is available, a wide variety of local promotions can be built into a film distribution program with movie houses. The important point to keep in mind is that these promotion extras are now possible to a far greater degree than ever before. Any good film distribution plan will prob-

ably include TV stations, schools, clubs, fraternal organizations, and other groups as well as motion picture theaters. Our emphasis on movies in this article is merely to illustrate the new possibilities in this area, not to suggest that movies are the only effective way to achieve market coverage.

Naturally, company marketing objectives are not all alike. A public information film distribution program will obviously provide greater marketing support to some, less to

others.

However, today's new capabilities do have *this* application for all companies: Because so much more advance cost and audience data are now available (as with advertising media) it is now possible to evaluate the public information film as a business investment, in terms the businessman understands. We've come a long way from the old "show-biz" days and are finally coming of age as an effective and modern marketing medium. •

THE GENERAL MOTORS Public Relations Staff Film Library is over 30 years old. It was formed in 1938 with a nucleus of several films produced for the Chevrolet Motor Division. Many of the early films, produced primarily for use within General Motors, were so widely used and so well accepted by GM groups that they were felt they might be of interest to outside organizations. The response to the offer was excellent and schools, business groups, clubs and civic organizations became frequent users of our motion pictures. As more and more films were produced for use within GM, they were released to the general public. Motion pictures on the subjects of driver and industrial safety, supervisory training, mass production methods, science, research, and engineering were added to the library.

From 1938 to the present a total of over 200 individual subjects have appeared in the GM annual film catalog. Some go back many years. *We Drivers* was first produced in 1938. It has been revised and completely remade several times, and is still one of the most popular films in the library. Others, such as *ABC of Hand Tools* and *ABC of Internal Combustion*, deal with their subjects in a basic and elementary manner, and have been at the top of our popularity list some years without revision.

The Public Relations Staff Film Library, located in Detroit, Michigan presently has 45 16mm sound subjects in circulation with a combined print inventory of 2,000. The films are available to any organized group within the continental United States at no charge on a "first-come-first-served" basis. We ask only that the exhibitor assume the shipping charges for returning the film. During 1968 GM Film Library subjects were seen by over 20,500,000 viewers. In addition, 284 showings were recorded by

TV stations around the country.

Most of the films in our library were developed by and produced for the General Motors Public Relations Staff. Occasionally, a film produced for a General Motors Division is added to the library when it is felt the subject matter and information will be of interest to our audiences. The Film Distribution Section reserves the right to decide what films will become part of our library.

About 95% of our requests come from secondary schools throughout the country and a great majority of these are "repeat customers" who have been users of GM films for many years.

Two promotions a year, one in the spring and one in the fall, keep our exhibitors informed of any changes or additions to the library. The fall mailing consists of a complete, illustrated, bound catalog and is sent to approximately 35,000 public, private and parochial high schools in the U.S. Copies of this same catalog are distributed to the General Motors Divisions who, in turn, circulate them to their dealers and field personnel for use as reference material. A supply of the catalog is kept on hand to answer inquiries received during the year about the use of GM films. The spring mailing includes a one sheet film listing/order blank and is sent to the same address list as the catalog. No other distribution of the film list is made.

In addition to these mailings, several widely circulated national film directories carry listings of our current film subjects. The listings are revised as changes or additions warrant it. The promotions plus regular routine correspondence keep us in touch with exhibitors throughout the year.

The direct sponsor-exhibitor relationship, we feel, is an important part of our film distribution program. The entire operation, from the receipt of the request,

Distribution by General Motors

By **BROOKS MARSHALL**
Manager, Production & Distribution

through the scheduling of the show, to the return of the films, is a General Motors operation. In addition to the film, the correspondence, the shipping label, and the report card all carry the General Motors identification. Besides the impression gained through the use of the film, the corporate identity is evident through all phases of the program. This, we feel, is an excellent extra bonus.

Although we maintain a complete film distribution unit, we do not overlook the value in using outside film distribution sources. On occasion, we employ commercial distributors to reach specific audiences with a particular film. This is particularly true in the case of television where a number of prints are turned over to a commercial distributor for a designated period of time to gain a certain amount of TV showings. This special distribution is carried on while the same subject is being distributed to non-TV audiences through our own distribution center.

Because of the demand for our films and the limited number of prints of certain of our subjects, we cannot always schedule prints for the exact dates they are needed. For this reason, some exhibitors prefer to have a personal copy of a film on hand to meet their schedules. We cooperate with these exhibitors by selling them our prints at actual print cost, not including any production costs. One of the conditions of purchase is that the exhibitor report is made as painless as pos-

sible through the use of a printed form which is sent to the purchaser prior to the reporting date. The number of purchases has varied from a low of 15 in 1943 to a high of 899 in 1966.

The basic source of information about our films is the audience report card returned to us following each scheduled showing. About 80% of the cards come back to us completed. In addition to the usual figures on number of showings and the size of the audience, exhibitors use these cards to transmit information on print condition, shipping time, service, suitability of the subject, and recommendations for improving the present film or for developing a new one. The information contained on these cards becomes the balance sheet of our entire operation. It forms the basis of our report to management on the state of the business. Film titles, number of showings, size of audiences, types of audiences, and geographic locations are transferred to data processing equipment. A comprehensive print-out, made monthly, enables us to determine quickly any changes in film use or film users.

In addition, the miscellaneous comments on these cards, of which there are many, are very valuable to us and are considered carefully. They help guide us in phasing out old films, revising them and selecting subjects for new films. They also offer helpful suggestions for revising and keeping track of our methods and the efficiency of our service. •

SHORTS-SHRIFT

... Or, whatever happened to those natives bidding us a fond adieu?

By **ARTHUR McLAUGHLIN**
Manager, AF/35
Association Films

ONCE UPON A TIME, in the dear dead days before "block booking" was decreed an evil by the Government, moviegoers would be served-up quite a cinematic smorgasbord with their double feature: a newsreel (defined by Oscar Levant as a series of disasters climaxed by a fashion show), Leon Errol two-reeler, a brace of coming attraction trailers, and a Fitzpatrick Travel-talk, or "house emptier," so called because many in the audience would bolt for the exits when it came on.

Audiences were never polled as to whether they liked or mere-

ly tolerated short subjects. They did, however, expect them. Nowadays shorts produced by the majors are a rarity. Even Disney has ceased making short cartoons, except for those very special instances where the subject matter has a 16mm educational potential, as with *Donald in Math Magic Land*. The last newsreel faded from the screen two years ago, the "Eyes and Ears of the World" now provided by the likes of Cronkite, Huntley and Brinkley.

Independently-made shorts, imported cartoons (some of them delightful, highly-imaginative and adult, too), murky travelogs that would shame old Fitz and reissues of *The Road Runner*, Warner Bros. supersonic sadist, are what audiences see now.

For us in the sponsored film business the gradual extinction of shorts is a boon. Theaters, hard-pressed to find suitable shorts, are turning to sponsored films increasingly to fill the bill. Their popularity with exhibitors is due in no small measure to the fact that they're free. However, sponsored shorts are coming into their own as entertaining, informative curtain raisers before feature.

For that matter, many sponsored shorts boost production budgets that even the most optimistic major studio would consider a foolhardy financial investment. Aside from their production values, sponsored shorts can be a unique film form, providing more thoughtful audiences with an interlude of substance and artistry. Such a film is "The Light in Shadows," a handsomely-wrought tribute to the science of radiology. Sponsored by du Pont, this Peckham Production uses the photographic medium with taste and imagination to tell a story that, if it weren't for corporate sponsorship, would certainly not be seen in theaters.

Far different is *Opening Day at the Golden Rule*, a 9-minute mini-musical from J. C. Penney

that bounces along *Seven Bride for Seven Brothers*-style as it nostalgically recreates Mr. Penny's first business venture.

Bright as the future is for the atrical shorts, sponsors should remember that theater audiences go to the movies primarily to be entertained. Tasteless, conspicuous or overtly commercial shorts can cause considerable audience resentment.

Theater audiences are very choosy these days. Some of the most highly-touted, overly-budgeted pictures have failed to make the grade. On the other hand, today's moviegoers are young — almost 50% of them are under 30 — and eager to see good films. This summer and fall the big films are shaping up as: *The Wild Bunch*, *Romeo and Juliet*, *If . . .*, *True Grit*, *Goodbye, Columbus*, *Lion in Winter* and *Midnight Cowboy*. These are the films audiences will be flocking to see for the next few months. These are also the films that sponsored shorts will accompany. The opportunities are indeed exciting — for the sponsored short that has that unique amalgam of entertainment, substance and message.

50 YEARS OF FILMS

One of the pioneers in industrial films, U.S. Steel has been producing and distributing them for more than a half century.

By **R. E. DOYLE**
Film Supervisor
U.S. Steel Corp.

U.S. Steel is a granddaddy of the industrial film business. It has been at that job for over 50 years. Shortly after 1912, it produced a short film entitled, *An American in the Making*, and exhibited it in theaters throughout the country. Since that time films numbering in the hundreds have been made by the corporation, either for internal use or for distribution to the public.

One of the most popular films distributed by U. S. Steel was one produced back in the late 30's entitled, *Steel — Man's Servant*. This first industrial film to be produced in sound and color was finally retired from circulation in

1960, and replaced by *Modern Steel Making*. But during its life span, *Steel — Man's Servant*, without the benefit of television or theatrical distribution, was shown over 10,000 times to a total audience of approximately 10,000,000 persons. Even today, nine years after its retirement, the corporation occasionally receives requests for it. *Modern Steel Making* in turn, has been updated this past year to include a short sequence on one of the steel industry's latest major innovations, the basic oxygen process.

Today, U. S. Steel distributes, free of charge, over 50 different 16mm films to colleges, trade associations, business and community groups and television stations. In addition more than 30 films are available to junior and

senior high schools. The subjects include steel production, research, fabrication and construction, general interest, agriculture, and safety. All but two films are in color.

Films are distributed under the direction of five U. S. Steel film centers — Birmingham, Chicago, New York, Pittsburgh, and San Francisco. Prints are on deposit with an outside distribution agency, Association Films, Inc. In addition to handling film requests for its own area, Motion Picture Distribution in Pittsburgh also coordinates total system distribution for the corporation's other four film centers. Foreign distribution is made through USS International in New York City.

Film requests are received by both the U. S. Steel film centers and Association Films. Those received by U. S. Steel are sent to the respective Association Films office for booking and shipment. All USS films are listed in Association Films catalog under the heading "Free Loan Films from United States Steel" in order to retain corporate identity. In addition, all literature and confirmations also are identified with

United States Steel. The corporation also distributes two catalogs of its own — one listing films available for school grades seven through twelve, and the other listing those available to adult groups, those of college level and above.

With the exception of two safety films, which may be purchased through the film producer, prints are not available for purchase. Prints are available on a short term loan basis only, and are not deposited with individuals or organizations regardless of the quality of their film handling equipment. This long-standing corporate policy was established to insure that USS films are made available in A-1 condition, as quickly as possible, to any point in the United States where they are to be shown. This involves a system of continual inspection and renovation to guard against the possibility of an exhibitor receiving a USS motion picture which is dirty, poorly spliced, badly scratched, cluttered with torn sprocket holes, or ineffective because of missing footage.

In 1968 U. S. Steel films were shown nearly 37,000 times to almost 23 million persons.

thrust power.

Start with a unique thrust-bearing between yoke and lamp housing that lets you maintain tension once you've set it, even as you constantly rotate the light. But, then, we've got the answer to everybody else's mini. Compact housing that gives you more clearance for greater rotation in yoke. Insulated, heat-resistant adjustment knobs that spell the end to annoying finger burns. And, spring-

loaded hinges on each of four barn doors that ban "creep," and let you adjust them individually for positive lighting control and sharp edge cut-off. The versatile MINI-MAC 1000 is a high-intensity, continuous-duty light source designed for TV and motion picture studio use. The tungsten-halogen "quartz" lamps operate directly on 120 or 230 volts. And, it is available

with a wide variety of individually engineered accessories to fit your exact needs and specifications. Unique. There's no other mini like it on the market today. You're the one we have to please . . . Write for complete detailed product information on the MINI-MAC 1000 (and 650). MAKING

Key man in the production and planning of United Air Lines films is John Grember (left). Here, he discusses scene from new film "The Man Up Front" with Arnold Palmer, who appears in the film about United's pilot training.

Proof of the effectiveness of United Air Lines' successful film program lies in the popularity of the films with diverse audiences and the number of awards received by the films. Here is how United successfully mixes the best cinematographic techniques with corporate goals to produce meaningful films.

PROBLEM: MIX THE BEST cinematic talent available with the goals of the industrial firm sponsoring the film. OBJECT: A motion picture that is both artistically excellent, yet meets the company's needs. Result: Catastrophe? Not at all.

United Air Lines has made a number of award-winning films over the past few years, but the task has not been simple. Balancing creative fervor with corporate goals requires a strong, guiding hand. At United, this role has been filled by John Grember, manager of film production.

"I'm sort of a referee," Grember admits. "We try to get the best creative people we can and guide them in the right direction to make sure we achieve the effect we want."

"My job is unique because I am involved in every phase of the production. I work with the writer, director and am involved in casting, editing and choosing the music composer."

The production of films, both for external distribution and internal use is not his only responsibility. Grember also is charged with coordinating still photography for print media; handling advertising promotions, direct mail and display photography; and approving or disapproving tie-in advertising.

Nevertheless, about 50 per cent of his time is spent on outside film projects, and about 20 titles are in distribution, including "Discover America" and the five "Swing Cities" films.

Like his counterpart in most other companies, Grember is heavily involved in the early stages of the film. With others, however, once the script is finished, the project is usually given to the producer to handle through completion. But at United, Grember functions as the executive producer, and works closely with the production staff until the film is completed.

The budget and distribution of the film are also his responsibilities and it is he who must decide how much should be spent on production and how much saved for distribution.

"I don't pretend to be a technical expert," Grember said. "We hire top creative people for that. I may start out with a director for the first few days, make sure he is headed in the right direction, and then leave him."

"Discover America," produced two years ago, is probably one of the most successful sponsored films ever produced. Grember, who functioned as executive producer on the film, recalls how the idea finally reached completion.

"Reid Ray Films brought the idea for the

FILMS AT UNITED

...m to us at United. A film on Europe called *High Journey*, produced by the North Atlantic Treaty Organization, had used shots from various types of military aircraft but we visualized a film to be shot entirely from helicopter.

"We hired Bill Bernal to do the script and put him on a pre-production tour. We told him to avoid the obvious, and not only look for the landmarks identified with cities, but also the unusual things. For example, we needed a closeup of a white cottage with a green lawn and the viewer assumes it is a suburban rural setting, but the camera pulls back to show a penthouse on a building on the Chicago lakefront.

"When Bernal had finished we saw we had enough for a two-hour film, much too much. We started cutting, and when we were done, we ended up covering 38 states in 46 minutes.

"We put a rough together and showed it to Igor Stravinsky so he could get some ideas for a score. Except for using portions of Stravinsky's *Firebird Suite*, and for the Hawaiian segment, it was all his original music. "Once the film was done, we premiered it before the U.S. Travel Service and the U.S. Information Agency. They both liked it and we ended up making prints in seven different languages for use by foreign airlines and the U.S. government.

"Next we showed it to Paramount Pictures. It had been entirely our project up until that time. They had been looking for an eight-to-twelve minute short, but after seeing it, they decided to leave it just the length it was. We gave them the theatrical distribution rights around the world and they agreed to hire it with a main feature, 'Barefoot in the Park'. The two-year contract with Paramount has expired and we now have more than 100 prints in 16mm for distribution to non-theatrical outlets."

If *Discover America* is the most successful to date, probably the best of the new films is *Honolulu*, one of the five 13½-minute "winging Cities" films. The script follows a mother, father and 21-year-old daughter from the Mainland on holiday in Honolulu. They separate and the daughter follows the young man and set through the city, while the parents seek out their own entertainment.

"While the film is slanted toward the young adult, it also shows that there is something for everyone in Honolulu," Grember said.

But the thing that sets *Honolulu* apart is the techniques used—split-screen and multiple pages with a combination of still, freeze-

Numerous awards won by "Discover America" are pictured above. At right, Grember discusses musical scoring of film with Producer Reid Ray and Composer Igor Stravinsky. Below, helicopter mounted camera is readied for filming sequence of "Discover America", much of which was filmed from the air.

making films at United . . .

continued

frame pictures and live action—which rarely is seen in a sponsored film. Like all current United films, the music is original and written specifically for the film.

The films on Honolulu and New York were released earlier in the year while "Las Vegas," "San Francisco" and "Los Angeles" were released in July.

Man Up Front, another film soon to be released, is aimed at the non-flier and features golfing great Arnold Palmer, a pilot himself. The film follows three United pilots through training at United's Flight Training Center in Denver.

"Hopefully, the viewer, after watching the intensive training pilots receive at least every six months, will realize that if an airline goes through all this effort to increase the knowledge and experience of its pilots, it undoubtedly practices the same extra care in every aspect of its operation," Grember said.

Why does United go to all the trouble and expense of producing these films?

Grember explained. "Out of United's total advertising expenditures, the greatest single portion is spent on television. We have been committed to film for some time, because we feel it has the advantage of combining color, motion and sound. Research has shown that people remember a message longer from a film."

These films are simply an extension of our commitment to the medium Grember continued, but they are not just 13½- or 46-minute commercials.

"We try to present something entertaining or educational with only subtle United identification. One person told me, 'I enjoyed it so much, I didn't realize it was a sponsored film,' which indicates to us that we are handling the identification right.

"We feel a film should whet the viewer's appetite," Grember said, "not only for a particular destination, but to stimulate a general desire to travel, then a desire to travel by air, and then, perhaps, to travel on United."

Serving as the middleman between the creative talent and the company, Grember has developed a certain *modus operandi*, or philosophy toward his task.

On the story line:

"The script is not cast in bronze, it's just a working guide line. I'm open to suggestions if the script can be improved. We are working with experts. Their job is making motion pictures and I respect their opinions. I try to be easy to work with, and make changes when they are for the better. The main thing, after all, is to get a good picture."

On talent:

"We want the best in creative talent—writer, director, music, etc. We want quality and we realize we will have to pay for it.

They tell me the best techniques to use and if it isn't contrary to company policy and within the budget, I will go along with the

On balance:

"Sometimes you see a movie and all remember is the girl in it, or maybe music—one single thing was just too overpowering. We try to get a balance so viewer won't miss the whole, because part has dominated. 'Discover America'—this type of blend of music, photography, editing—good balance with no one thing dominating."

Has the approach United has used been effective?

"The proof, I feel, is in the increased business to United, and also the awards we have won," Grember said.

During the last few years, United's *Discover America* has won about 10 significant awards. And, if the "Swinging Cities" series of films is any indication, the end is not sight.

During a break in the filming of "Honolulu," Grember and family enjoy a rare moment of relaxation.

Arnold Palmer with instructor and class at United's Flight Training Center in Denver during filming of "The Man Up Front."

Filming within the confines of airplane cabins is a regular chore in United films and requires careful technical planning.

World's Most Convenient Power Supply THE CINE 60 POWER BELT®

Cine 60 offers you the most advanced concept in battery design — powerful, completely-sealed nickel-cadmium cells in a handsome belt for the greatest comfort and mobility • No awkward battery case to get in your way, no bulky weight tugging at your shoulder • A specially designed built-in charger plugged into any 115 volt AC outlet will recharge your battery safely • EXTRA NEW FEATURE! To protect battery and camera motor from damage in case of a short circuit, an automatic overload switch is built into the belt system. This switch functions as an automatic fuse which will reset automatically and will never have to be replaced • Power Belt 8.4 volt for Arri 16 • Power Belt 16.8 volt for Arri 35 • The 16.8 volt power belt is also equipped with a selector switch which permits tapping the battery at 8.4 volts for use of Arri 16 camera with a capacity of 7 amp. hour • Also available for Eclair 16 camera and others • New! Available now for the first time: Stretch powercables for all Arriflex models. Retracted length 11" as illustrated. Stretches to 6'.

BE SMART **BE SMOOTH**
Zoom with the push of a button

Cine 60 has designed a line of zoom motors for the most popular Angenieux Zoom Lenses now in use by motion picture photographers all over the world.

Above illustration shows Angenieux 12-120, 9.5-95, 12-240 and 25-250.

All Cine 60 motors are equipped with the smallest and most powerful micro motor available on the market today.

A small 6 volt transistorized hand control unit assures utmost torque and precise control.

FEATURES

- Transistorized Circuit
- Rheostat Speed Control
- Rechargeable Cadmium Batteries
- Built-in Charger
- Clutch System for Smooth Start and Stop
- Easy to Install
- Will operate for Several Shooting Days without Recharging
- Pre-Selector Stops
- Speed Range from Approx. 6 to 28 seconds

Hang around a certain crowd

and you get a reputation.

... crowd doesn't mess around. Before they decide to investigate. That's why the MPO Videotronic Super 8 Projector is used by so many top companies. ... then, when you make the best repeater movie projector (and after 35 years of projector manufacturing experience, we do) people find out. About the Videotronic Super 8's unique 2-way projection—shows on its own built-in TV type screen, or throws a large wall picture. How it's cartridge loaded, so there's no touching or rewinding the film. About the superb transistorized sound. How it folds to carry easily, can fit under a plane seat. Find out what it can do for you in sales, merchandising, promotion, training.

For information about leasing plans and film and tape conversion for Videotronic Super 8 use, have your local producer call or write us. Or do it yourself.

Conference Program Announced

Bill Blume, conference program chairman, has just announced a tentative program for the Annual Conference to be held in San Francisco at the Sheraton Palace, October 16-18.

Carrying through on the theme: "The Shape of Things to Come", the conference will highlight the new look in audio-visual communications for the 70's.

The keynote address will be "Markets of Change", given by Don Fabun of Kaiser Industries, author of the celebrated book: "The Dynamics of Change". Other highlights will be:

THURSDAY

"The New Wave" — "A Look to the Future" — Dr. Bernard Kanter, USC, Cinema

American Film Institute Presentation
"Trends in Media Utilization in Training and Education" — Dr. Richard Lewis and Dr. Jerry Kemp, San Jose State College

Super 8mm Program on Polaris Subs — Captain Guy Leonard, USN, Director LEAD Project

"Threshold in Educational Communication — Random Access Information Center" — Maynard J. Kuljian, Special Productions Div., Ampex

An AVCOM Program for Western Airlines — Don Adams, Eastman Kodak Co.

"Pre-Testing Instructional Film" — Captain Jay Sedlick, U.S. Air Force Academy

FRIDAY

"Visual Literacy and the New Audiences" — What Commercial Market Research Contributes to Other Communication Media

"Film and TV—The Marriage" Bob Day, Ampex Corporation

"Communication — Impact or Apathy" — "Information Retrieval — Glenn McMurry, National Audio-Visual Center

ERIC Project — Don H. Coombs, ERIC Clearinghouse on Media & Technology Institute of Communications Research, Stanford University

SATURDAY

Film and Exploration — National Geographic Society

Apollo Moon Photography — NASA Information Film Production Abroad — Mr. Bruce Hershensohn, Director, Motion Picture & Television Service, USIA "An Invitation to Expo 70" — Japan Consulate, San Francisco National Tourist Organization

Other conference programs will be announced as they are confirmed.

The highlight of the conference will be the film awards banquet at which time twenty four Cindy's will be awarded to the producers of the winning films.

Beck's "Crystal Trip" Marks Los Angeles June Meeting

IFPA's Los Angeles Chapter experienced its first technical session in expanded cinema with the June 19 meeting headlined by Bob Beck, president, Color Control Company, Hollywood.

Beck, a cinema engineer in addition to heading his own company, spoke to an enthusiastic audience on "Metaphysics/Tools/Techniques of Expanded Cinema."

Beck started the meeting off with a flash, literally, as he screened *The Crystal Trip*, a Beck original, demonstrating modification of existing equipment to produce unique special effects.

A Bell and Howell Tandematic fader pro-

Los Angeles Chapter Chairman Michael Rye (left) visits with Bob Beck and his associate, Doris Spencer, following June meeting.

ector for was used. This was equipped with two sets of polarizing filters: the first between light source and slide holder (polarizer), the second rotated in front of the lens (analyzer).

The slides were Leitz 2" x 2" cover glass plates heated at a low temperature, with birefringent chemicals melted on one plate, sandwiched by the second plate, then cooled. Chemical crystals remained invisible until the two crossed polarizers were used to view them. And all this to a score by Debussy!

In addition to how-to-do-it tips on special effects, "the poor man's computer", and "do it yourself labs", Beck screened the prize-winning films "Lapis" (James Whitney), "Off-On" (Scott Bartlett), "Cybernetik 53" (John Stehura) and "Genesis Titles" (Pat O'Neill).

The event was staged at the Union Oil Center, Los Angeles by Program Chairman Jack Meakin. Chapter Chairman Michael Rye helmed the meeting.

IFPA Display on the Road

Bob Montague, chapters vice president and membership—West, has announced a schedule for IFPA's new display which is currently functioning at Norton Air Force Base, California, Motion Picture Center. Newcomers to that facility in motion picture operations, have an opportunity to see the IFPA story.

The new membership applications/brochures are also available at Norton, other chapter locations and from the National Office in Hollywood.

Future schedule of the display will take it to San Francisco from August 11-14, for the S.P.I.E. Annual Conference at the Jack Tar Hotel, then it will be moved to the Cow Palace on the 19th for Wescon. In September it will appear at the Super 8 Seminar in San Diego, the SMPTE Semi-annual convention at the Century Plaza in Los Angeles, and in October it will greet the IFPA members for the first time at the Annual Conference at the Sheraton Palace, October 16-18, in San Francisco.

Requests for future bookings are solicited by the IFPA National Office and will receive consideration in order of request.

San Diego Books Roadshows

San Diego Chapter booked another Road Show presentation. ASC, award winning cameraman Joseph V. Mascelli, the author of the well known book "The 5 C's of Cinematography", previewed the new book on which he is working, dealing with new techniques in lighting for documentary and theatrical production. The meeting was held in San Diego on July 24th for members of both IFPA and SPIE.

Another road show appearance of Eustace Lycett is scheduled for the August 21st meeting of the San Diego Chapter. To be held in an intimate theatre setting, Mr. Lycett will present film clips from *Mary Poppins*, *The Gnomobile* and *Love Bug*, as he did at Disney Studios. Detailed explanations and de-

scriptions of how special effects, combining animation and live characters, are accomplished and can be applied by the information film producer.

Arrangements are being made for a Super 8 seminar, similar to the one recently presented in San Francisco. This will be an all day seminar on Saturday, September 20th and will be open to professionals and amateurs alike. Area residents interested may make advance reservations with Griff Davies, Seminar Chairman, c/o Rohr Aircraft Co., Motion Picture Dept., Chula Vista, Calif.

Inland Empire Chapter Chartered

Thursday evening, June 12, 1969, IFPA National President Mitch Rose rapped for order and the first business meeting of the Inland Empire Chapter was in session. The Inland Empire consists of the San Bernardino-Riverside-Colton-Palm Springs area.

Meeting in a small auditorium at the Aerospace Audio Visual Service Headquarters Norton Air Force Base, California, the group consisted principally of the Chapter Members and four National Officers.

After a few words of encouragement from President Rose who read the letter of application to the National Board, the Charter letter was presented to Chairman Pro Tem Col. James P. Warndorf. Col. Warndorf then assumed the role of presiding officer, but temporarily returned the floor to President Rose for some suggestions on handling future meetings.

A vote was taken that the temporary officers: Col. Warndorf, Chairman; Lt. Col. Larry Albers, Program Chairman; Roland Beech, Membership Chairman; and M. Ray Ussery, Secretary-Treasurer remain in office until permanent officers are elected.

Longtime IFPA member Bob Engel suggested that the Inland Empire Chapter, taking into account that the rural complexion of the San Bernardino/Riverside area did not offer a wide assortment of employment opportunities for the youth, should sponsor instruction and coaching to the young people of the area in film making principles. It was agreed that a program of this importance should be started by the chapter.

How Good Are Your Salesmen?

Are they as good as they could be or as good as you want them to be at...

"BY-PASSING SALES RESISTANCE?"

Do they know what causes sales resistance? Do they know when to expect it or why people use it? Do they know how to turn it from an obstacle into an advantage?

If you want your salesmen to know the attitudes and techniques of by-passing sales resistance—show them...

THE "CREATIVE SELLING" PROGRAM

...with 14 meetings, including workshops on every important step in the sale, showing the attitudes and techniques of helping people buy benefits. Complete with 7 sound color filmstrips, Leader's Manual, Salesmen's Manuals, Quizzes, Evaluations, Summaries, Diplomas, etc.

"CREATIVE SELLING" WILL HELP YOU INCREASE SALES BY...

...showing your men how to call on customers with ideas that create a need and desire for your product or service.

...showing them the attitude and techniques that cause people to buy.

...showing them how to bring prestige to your company, your product and to themselves as salesmen.

YOU BE THE JUDGE!

Take advantage of the Preview Offer. See and evaluate how this program will help your salesmen become as good as they can be and as good as you want them to be.

Go Anywhere With New Background Effects

A joint effort by General Electric and Front Projection Corporation has resulted in a new color TV, motion picture application. GE manufactures the PJ-400 Color Video Projector which offers a giant size color TV image; Front Projection manufactures the Studio 90-M which allows GE's large TV image to be re-photographed with live models for color broadcast or filming capability. Television and/or motion picture producers can choose any full color background, any off-the-air TV broadcast, any video tape, or anything that can be fed from a telecine center, such as slides, filmstrips or movies. After choosing the background any full color subject may be selected and the two can be put together with totally realistic effects and full studio convenience.

The GE PJ-400 is fed from telecine and it projects into the Studio 90-M; the Studio 90-M projects onto the Retro-Reflex screen. The image returns to the broadcast camera through the Studio 90-M. From there it is on the air or on tape.

A demonstration film is available from Front Projection Corporation.

For information on the PJ-400 write General Electric's Visual Communications Products Department, Electronics Park, Syracuse, New York 13201. Information on the Studio 90-M is available from Front Projection Corporation, 10-40 45th Avenue, Long Island City, New York 11101.

Bardwell & McAlister Maximizes the Mini

A line of Mini-Mac 650 and 1000 watt quartz lights has been introduced by Bardwell & McAlister. These lightweight, portable minis were designed for broad fill and flood lighting applications for TV and motion picture studios, and are also effective for still photography. Barndoor "creep" has been eliminated by

new products review

A full range of accessories is available for the Bardwell & McAlister Mini-Mac.

use of spring-loaded hinges attached to each barndoor, assuring stability. A thrust-bearing unit has been inserted between the yoke and lamp housing, maintaining constant tension for more positive rotational control. Adjustment knobs are coated with a permanent heat-resistant material. The compact housing design allows for a substantially greater range of rotation within the yoke.

The minis are available with a wide range of lamps in different wattages, color temperatures and intensities. A brochure is available. Write Bardwell & McAlister, Inc., Department 895, 6757 Santa Monica Boulevard, Hollywood, California 90038.

This Lumipoint illuminated tip pointer, especially designed for rear screen projection presentations features a three foot shaft that separates into three sections and packs conveniently into a fitted leather carrying case. More information is available from Spindler & Sauppe, Inc., 1329 Grand Central Avenue, Glendale, California 91201.

Porta Studio Provides Simple Quick Lighting

The Porta Studio provides simple and quick lighting installation for remote or studio applications. Spring-loaded Pole Kings, which do not require bolting to floor or ceiling, provide support for hanging fixtures over the set. Porta Studio is lightweight, portable, rugged, and features long-life tungsten-halogen quartz lighting. Offices, school rooms, dens, showrooms can be converted to a Porta Studio for a one or two camera set-up. The lighting equipment provides for key, fill, back and set lighting applications. Power is supplied from existing wall circuits.

The Porta Studio provides quick easy lighting for black/white or color programming.

For more information write Berkey-ColorTran, Inc., 1015 Chestnut Street, Burbank, California 91502.

Paillard Introduces Silma Duo Projector

A flick of the switch is all that's needed to show 8mm and Super 8 films with the Silma Duo projector from Paillard Incorporated. This projector is compact and weighs little more than nine pounds. It will thread film automatically up to the take-up reel. A super-rewind provides for instant replay and a fast advance is included for skipping to selected scenes. The rapid transport feature can move a full reel of film (400 ft.) forward or reverse in 60 seconds. A switch disengages all mechanisms freeing the film to move on rollers so there

The Silma Duo is ruggedly constructed with a die-cast metal frame and has a snap-on cover.

is never a possibility of damaging the film.

A Dichroic reflector lamp and a sharp ISCO 15-27 mm f/1.3 zoom lens combine to give vivid and evenly illuminated projection. Variable projection speeds are electronically controlled from 16 to 24 fps by a knob located at the back of the projector. All controls are located in one panel. Write Paillard Incorporated, 1900 Lower Road, Linden, New Jersey 07036 for more information.

Ampex Introduces One-Half Inch Video Tape

A one-half inch wide video tape for use on closed circuit videotape recorders and offering improved dropout performance and increased recorder head life compared to similar tapes has been placed on the market by Ampex Corporation. The 163 Series video tape is manufactured with an oxide formula which provides greater signal to noise performance and tape life than similar tapes now on the market. The new binder results in a smoother surface finish which allows long still frame operation and the extended head life.

The tape is designed for vid-

This 1/2 inch tape is designed for both color and monochrome closed circuit recording applications.

otape recorders using the 1/2-inch wide tape format used in business, industry, medicine, education and other closed circuit television applications. It is available on a 7-inch plastic reel which holds up to 2,400 feet of tape and is capable of one hour of playing time at a recorder speed of 7 1/2 inches per second.

The tape is available from Ampex magnetic tape division, Opelika, Alabama 36801.

KEM Editing Table Offers Versatility

The KEM 8-plate Universal editing table is a completely modular system and may be used with 3 pictures and 1 sound track, or two pictures and two sound tracks, or 1 picture and 3 sound tracks and it will run 16mm or 35mm or any combination of 16 and 35mm in sync.

The Keller editing table is completely noiseless and will pass the poorest splice or torn sprockets.

On special order 65/70mm, Super 8 or 8mm transports may be had. A wide range of speeds is available from 4 fps to 144 fps forward or backward and the tables front plates will wind or rewind at even higher speeds. Sync can be advanced or retarded. 100 watt quartz-halogen lamps project on the picture module.

Picture modules for CinemaScope or Techniscope are also available, as are sound modules for 17.5mm in addition to the

full range of 16 and 35mm. Even a TV module may be dropped in place of a picture viewer for use with a video monitor whereby an optional frame counter could be superimposed onto the screen or video tape.

Write The Intercraft Corporation, 354 West 45th Street, New York, N.Y. 10036 for more information.

Shure Microphone Mixer Has Built-in Reverb

Shure Brothers' Model M68-RM microphone mixer has adjustable, built-in reverberation and is suitable for the full range of multi-microphone applications in commercial public address and paging systems. It is fully transistorized and features four microphone input channels, each with an individual volume control and an individual slide switch to select high or low impedance. One of these channels also doubles as an auxiliary high-level input that accepts tape recorder, tuner and accessory signals for maximum flexibility.

The Shure Model M68M microphone mixer has optional accessories including battery power supply, output cable kit, locking panel, phono pre-amp, rack panel kit and stacking kit.

With its adjustable reverberation capability, the Model M68-RM can simulate the acoustics of a large concert hall and a master volume control governs the volume of all four inputs simultaneously. Other features include a jack that accepts a remote on-off switch, female Cannon-type connectors on all four microphone inputs, and a facility for stacking two or more mixers. More information may be obtained by writing Shure Brothers, Inc., 222 Hartrey Ave., Evanston, Illinois.

Tape Duplicator Designed For Educational Uses

Telex's reel-to-cassette tape duplicator, the model 235-CS, consists of an open reel master transport and cassette slave modules. Each slave module contains three cassette transports. Both master and slave transports

feature two-speed hysteresis synchronous motor drive with the master operating at 15 and 7.5 ips, and the cassette slaves at 7.5 and 3.75 ips. Wide band, solid state electronics are of modular plug-in design. The system can be expanded by adding slave modules. It is solenoid controlled and operated by push-buttons from the master transport.

Cassette slave modules for this duplicating system are compatible and interchangeable with existing model 235 open reel duplicators.

The duplicator will be available in half-track single and dual channel, quarter-track dual channel, as well as quarter-track four channel configurations. More information may be obtained from Telex, Communications Division, 9600 Aldrich Avenue South, Minneapolis, Minnesota 55420.

Tilt Screen Controls Angle-of-Reflection

The Raise-N-Tilt screen provides the opportunity to control the angle of reflection regardless of room layout, position of the projector or the presence of ambi-

The Raise-N-Tilt screen can be easily mounted on wall or ceiling.

ent light. The screen tilts, raises and lowers with a slight touch. Used as a corner mount near a window, the screen virtually disregards most of the direct light coming from outside because the controlled projected light is being bounced directly back to the audience. For information write Brandons, Inc., 1027 Mary Street, Jacksonville, Florida 32207.

Hervic Corporation Has Location Lighting Kits

Hervic Corporation is offering a range of seven different location lighting kits, each designed to fit into a single carrying case. All lighting units and accessories are also available as separate units for replacement purposes and for separate use when required. The Hervic 1000-watt and 650-watt quartz miniature fill lights are provided with a rugged new housing design which allows flo-thru convection cooling, reducing heat-load and increasing unit life. These units are designed as high-intensity, continuous-duty quartz light sources. A wide range of

The Hervic 1000-W Mini-Quartzlit features removable barndoors.

tungsten-halogen quartz lamps are available for use in these lighting fixtures which permit operation directly on a 120 or 230 volt line. The four-leaf barndoors can be adjusted individually for positive lighting control and extremely sharp edge cut-off.

Barndoors are removable when not needed and the fill lights have one-piece reflectors which increase light output without peaking and help provide a smooth, even flat light pattern over a wide area. More information is available from Cinema Beaulieu, 14225 Ventura Boulevard, Sherman Oaks, California 91403.

Hercules Cam-Link Tripod Holds 80 Pound Loads

The Hercules tripod head supports loads up to 80 pounds and incorporates a springless Cam-Link movement and Quick-Or mounting plate. The Cam-Link head, by providing an engineered cam action, does not raise or lower the center of gravity of mounted equipment and completely eliminates the possibility of "nose-diving". This mechanical leverage allows a finger-tip control of position. The Quick-

This medium priced Hercules tripod features better bearing and braking systems.

On mounting plate provides instant mounting and removal of equipment and allows a single man to mount a camera weighing 80 pounds. Both the panning and tilting mechanisms operate on sealed ball bearings for a smoother operation. Complete information is available from Quick-Set, Inc., 8121 Central Park Ave., Skokie, Illinois 60078

Carousel 860 Now With Remote Control Focus

The Kodak Carousel 860 projector offers remote control focus in addition to automatic focus. This is especially helpful to lecturers or others who operate away from the projector and have a mixture of glass-mounted and cardboard slides in the same tray and wish to adjust focusing during a presentation. The showing of slides can also be controlled automatically (with a choice of

This Carousel projector has a 12-foot remote control cord.

5, 8 or 15-second intervals), by remote control or by push button on the projector itself. More information is available from Eastman Kodak Company, Rochester New York 14650.

isting supplement to . . .

Audiovisual Equipment Buyers Guide

The **Carri-Vue** Overhead Projector has simple press-a-lever action which stores the die cast aluminum projection arm and head within the body and results in a compact, lightweight luggage type carrying case complete with handle that weighs only 18 lbs. Write **T. M. Visual Industries, Inc.**, 25 West 45th St., New York, N.Y. 10036.

Stackloader automates the TMC woff, a lightweight, portable, wet projector for filmstrips and slides. Up to 40 slides can be stacked in the holder. Write **T. M. Visual Industries, Inc.**, 25 West 45th St., New York, N.Y. 10036.

The remarkably small size of the **Institutur** Super 8 cartridge sound projector makes it an ideal tool for the salesman. Show pictures on its 9 x 12 inch screen or project them on a wall screen up to 6 ft. wide. Write **Bohn Benton, Inc.**, 110 Roosevelt Avenue, Mineola, N.Y. 11501.

Model 11-1-P portable tape recorder is made especially for professional cameramen and audio engineering use. Compatible with 16 and 35 mm cameras, it records sound with full synchronization with film. It is a solid state, full track, battery operated recorder with four tape heads. Write **Tandberg of America, Inc.**, P.O. Box 171, Pelham, N.Y.

The **Pro-Gramo** Carovox cartridge sound base for Kodak Carousel slide projectors automatically advances slides and shuts off at the end of a program. The projector is easily mounted with no modifications. The Carovox has 10 watts of hi-fi audio power. Write **Pro-Gramo Inc.**, 44 West 44th St., New York, N. Y. 10036.

Some Afterthoughts

Nearing completion of this issue, after several weeks of conversations, phone calls and letters compiling data and securing the commentary of specializing leaders of the distribution field, it occurs to us that perhaps some explanation of purpose and intent should be added.

This issue from the start was intended as a definition and broad presentation of the most widely accepted means of reaching the general public through audiovisuals.

Even though the recent decades have provided technological advances and new formats, hardware and tools —as yet the professional distributor cannot statistically document their effect. We do not want to imply that evolving formats like Super 8 sound, videotape and electronic video recording have not made a significant impact on the total audience available, for they have. But for various reasons these formats have not yet achieved widespread acceptance and use by much of the general business and private public.

Of more immediate significance to today's A-V communicator, we believe, are the many new programs and services avail-

able for getting a program *seen now*. Airport theatres, resort movies, college programs, special promotional literature and broader international capabilities, we believe offer today's A-V communicator even more than he needs to reach his audience.

And, we believe that as professional distributors expand into new areas like Modern Learning Aids, Sterling Communications and other communications realms, the ultimate result cannot help but be beneficial to all—making better communicators of them, and of greater value and service to industrial sponsors.

Growth in Atlanta

THE SECOND ANNUAL ATLANTA International Film Festival, June 16-21, was marked by tremendous growth. More than 800 films (500 above last year) from 32 countries were entered in this year's competition.

Film-makers from throughout the world responded to the incredible growth of the festival.

Among those presenting special awards were three distinguished Atlantans: Former Governor Carl Sanders, The Rev. Martin Luther King, Sr., and

Frank Carter, President of the Atlanta Chamber of Commerce.

The Golden Phoenix, grand award for Best of Festival, was awarded to William E. Barnes for his highly innovative first film, *Recess*. This 90 minute color feature, best described as "tribal movie making," combined the talents of nine young actors, among them Heather MacRae, currently starring in *Hair*.

Silver Phoenix winner in the feature film category is *Double-Stop*, a first feature effort by George and Gerald Sindell, two young brothers from Cleveland, Ohio. This film is especially noteworthy because of its beautiful photography and meaningful poetic visualizations concerning the pressures and complex problems of today's world.

Capturing the top short subject Silver Phoenix is a remarkable film entitled *Amblin* by Denis Hoffman. The Festival felt that this is the most meaningful and important featurette to appear on the screen in years. It probes deeply into the human relationships between a boy and girl of different backgrounds and outlooks. *Space Oddity* by Ed Seeman of Gryphon productions was awarded the Silver Phoenix for best experimental film.

The United Air Lines/MPO Productions film, *Once Upon a Time* . . . was selected as the world's best documentary film and received The Silver Phoenix in that category. This motion picture proved again how powerful cinema can be in telling a story without any narration whatsoever. Following a beautiful young girl on her first visit to New York, the whole story of the excitement of the city unfolds in a bright, fresh new way.

For the second year in a row,

J. Walter Thompson and E. J. Man Kodak captured The Silver Phoenix for the world's best television commercial, *Anticipating*.

The Golden Dove, created a special award to honor film contributing to world peace, was presented to Fred A. Niles, President of Fred Niles Communications Center by the Rev. Martin Luther King, Sr. The presentation was highlighted by a moving and meaningful speech by the Rev. King. The President of Atlanta Chamber of Commerce Frank Carter made the special presentation of the Forward Atlanta Award to Cox Broadcasting/WSB TV for their film, *The Return of Private Youngblood*. Former Governor Carl Sanders presented the Gold Medals for Best Political Film and TV commercial.

Matt Farrell Succumbs

Matt Farrell, president of Matt Farrell Productions, Inc., New York City, died June 30 of a heart attack at his Connecticut home. He was 62 years old.

One of the pioneers of business filmmaking, Matt formed his own company in 1951, and was responsible for a steady list of product and institutional motion pictures of uncompromising craftsmanship for the past 20 years. He was a charter member, co-founder and former vice president of IQ, the International Quorum of Motion Picture Producers.

The company will remain in business and will continue to uphold the standards of quality and integrity that Matt established. New officers of Matt Farrell Productions are C. L. Farrell, president; Edward R. Murkland, vice president; and William H. Branagan, secretary/treasurer.

Just Returned from a Successful Engagement

That's not the half of it. This is just a portion of the three tons of equipment we have available for multi-screen use. We can interlock two, three, all the way up to six film projectors for motion picture presentations. Slides snuggle in like part of the family. We're convinced this is one of the finest and most versatile equipment packages for multi-screen presentation.

You might wonder how we got so interested in this. It's easy. We produce the shows, too.

TOOLS, TECHNIQUES AND IDEAS FOR AUDIOVISUAL COMMUNICATIONS

In 1953, the New York Stock Exchange

made a very smart investment.

They're still collecting the dividends.

The exchange's investment was a film called "What Makes Us Tick." They made it to help people understand the Big Board's role in the nation's economy.

The results have been bullish ever since.

So successful, in fact, that the exchange has broadened its national program with three additional films that explain how every American

benefits from the free enterprise system.

At last count, more than 300,000 groups have seen these films. In club meetings. Business organizations. Schools. Churches. Community groups of all kinds.

How does the exchange reach such a tremendous volume of viewers? They work with a specialist. Modern. The world's largest distributor of sponsored films. And earn handsome dividends.

MODERN TALKING PICTURE SERVICE, INC.

1212 Avenue of the Americas, New York, N.Y. 10036

Want more information about the New York Stock Exchange films? Or about how sponsored film programs can benefit your company? Write to Modern, the world's largest distributor of sponsored films.

Sure, you've got some great sales films. But how do you get your salesmen to show 'em?

With the Technicolor 1000—of course.

Sales films really sell. But who likes to use 'em? No one. Not with all the complicated, heavy equipment you have to cart around. That's why the Technicolor 1000 cartridge-loading Super 8 movie projector makes a big hit with salesmen. It's 19 lbs. light. Just snap in the sound film loop cartridge (with up to 29 minutes of film) push the "go" button and the show is on. No threading, no rewinding. Why don't you look into converting your current sales films to Super 8 sound film loops. It's surprisingly inexpensive. Just contact Technicolor. We'll help you put your films on the road!

United Air Lines Opens Chicago "Mini-Library"

A mini-library of aircraft and airport stock footage has been opened in Chicago by United Air Lines to provide Midwestern film producers and editors facilities for viewing selected scenes in the airline's film library and for faster service in placing orders for scenes from the film library catalog.

Scenes stocked in the mini-library include jet aircraft landings, takeoffs and inflight sequences, as well as establishing shots of various U. S. airports.

A 16mm color-viewing reel is available for screening in Chicago. 16mm color prints and masters are stocked in the mini-library for immediate service on film orders.

Mini-library services may be obtained through Doug Timberlake, Regional Publicity Man-

ager, United Air Lines, 33 North Dearborn Street, Chicago, Ill. 60602 (phone: 312/726-5500).

Bebell & Bebell Now in Larger New York Facility

On September 1 all four lab divisions of Bebell & Bebell Color Laboratories, Inc. will be housed and operating from a new and enlarged facility in the heart of the New York City motion picture district, near the Film Center Building.

The new lab includes associated office space, screening rooms, and vaults. The street-level shipping and receiving area was expressly designed to include a convenient parking garage.

Bebell & Bebell Color Laboratories, Inc. new address is 416 West 45 Street, New York 10036. Their new phone is (212) 245-8900.

CINE Awards, Exhibition Slated Friday, Nov. 14

CINE, the Council on International Nontheatrical Events will hold its annual awards banquet and exhibition, Friday, November 14, in the NEA Building in Washington, D.C.

A total of 206 Golden Eagles will be presented during the ceremonies, along with 28 Eagles for amateur films. The 206 Golden Eagles represent an all time high of winning films, selected this year from 769 entries.

Most of the winning films are now competing in international festivals and competitions throughout the world.

A.V.E. Corporation Opens Canadian Branch

A.V.E. Corporation, designers and manufacturers of audiovisual equipment, has opened a Cana-

dian branch at 4980 Bouchard Street, Montreal 308, Quebec.

The complete line of A.V.E. equipment and services available in New York will now be offered in Canada. The new office, headed by John Lush, adds to A.V.E.'s distribution and service centers in Italy, Holland, Australia, New Zealand, India, Africa and Spain.

New York Festival Makes Seminar Program Plans

"Computerized Films," "Creative Salesmanship," "How To Merchandise Your TV Commercials to the Trade" and "Videotape Productions and Techniques" are only a few of the themes to be covered at the elaborate lecture program and seminar scheduled during the 12TH International Film & TV Festival.

continued

of New York, October 14-17 at the Americana Hotel.

No less than three films, with a total running time of 47 minutes, will describe methods by which a computer can be used to perform much of the tedious work involved in the production of animated movies. The technique involves the use of a computer-controlled microfilm recorder and the use of a programming language and system designed specifically for movie-making. In this way, simple animated movies can be produced quickly and economically.

Jack Upham, Staff Creative Consultant for The Chartmakers, Inc., in his presentation called "The Care and Feeding of Sponsors or The Role of Creative Salesmanship", will discuss and document the need—for producers and sponsors alike—to create better understanding and more effective, honest communication concerning the best ways of obtaining professional results.

With the rising production costs today, the lecture "How To Merchandise Your TV Commercial To The Trade" will show how a sponsor can get as much benefit out of his commercial as possible, how he can increase his sales volume and in this way get the fullest possible value out of the commercial. A seminar, under the Chairmanship of A. Tennyson, vice president of the J. Walter Thompson Agency, will diagnose "The Changing Relationship Between Sponsor, Ad Agency and Production Company," and a full day with 7 different lectures, demonstrations and visits to leading studios as well as production houses is dedicated to "Video Tape Productions and Techniques."

Full details about this four day session can be obtained from Industrial Exhibitions, Inc., 121 West 45th Street, New York, N.Y. 10036.

Technical and Optical Opens New York Branch

Technical and Optical Equipment Ltd. of Canada has opened a New York branch office at 250 West 54th Street.

The new office will enable Technical and Optical Ltd. to distribute, sell and service their

complete line of high quality professional photographic equipment throughout the United States.

Capitol Hi-Q Opens New York Music Office

Capitol Production Music has opened a New York office at 1650 Broadway, to serve area film producers and advertising agencies with modern production music through the Capitol Hi-Q Library and the Media Music Series.

Heading the new office is Steve Cagan, eastern operations manager.

Camera Mart Incorporated Makes \$100,000 Acquisition

An acquisition of over \$100,000.00 in new equipment has been made for the Camera Rental and Lighting and Grip Division of The Camera Mart, Inc., New York.

Turner Receives Award For Professional Improvement

Richard G. Turner, film producer, has received the Farn Foundation's \$500.00 Professional Improvement Award for his production of *Land in Jeopardy*.

Honorable mention certificate and checks for \$50.00 were given to Norman Virag of Michigan State and Ralph Mills of North Carolina State University.

Project Empathy Gains Certificate of Merit

The State Division of Human Rights has been awarded the Certificate of Merit of the Art Directors Club of New York for *Rejected Child* and *Dead End Day* two 60 second messages in the Project empathy series now being broadcast by radio and television stations throughout New York State.

Cineffects Color Lab Expands Existing Facility

National Showmanship Services, Inc., is expanding its Cineffects Color Laboratory, Inc. subsidiary to keep up with steadily increasing sales. At the same time

it was reported that both sales and earnings for the first four months of 1969 were well ahead of last year.

The expansion — to an additional floor in their present building — will add 4,500 feet of space to Cineffects' existing space.

Ultrasonic Shovel Breaks Ground for DuKane Corp.

An ultrasonic shovel broke ground July 12 on the new national headquarters of DuKane Corporation, St. Charles (Ill.) based maker of audio-visual, communications, and related electronic equipment. The ultrasonic shovel was built specially for the event by DuKane engineers by linking a DuKane Ultrasonic Amplifier to a standard construction shovel.

According to DuKane president J. Stone, the new multi-million dollar building will house the firm's corporate offices, research and development laboratories, and production plant.

Breaking ground for the new DuKane headquarters are DuKane president J. M. Stone (center); Howard Turner (left), manager of the A-V division; and Stephen Nardi, president of realty organization which acquired the land for DuKane.

Hollywood Video Center Triples Scenic Capacity

Hollywood Video Center has tripled its Scenic Services Division capacity with completion of additional facilities at 1237 N. Vine St.

The expansion now gives the division a total scenic services capacity.

Technicolor TV Division Doubles Daily Capacity

Daily film capacity of the Television Division of Technicolor, Inc., will be doubled by the end of July, it was disclosed today (10) by Technicolor president Paul W. Fassnacht.

The greatly expanded capacity of the division is being made possible by adapting existing printers and machinery to a new type of film transport which permits operation of the equipment at accelerated speeds.

Midwest Visual Expands Through Northern Illinois

Midwest Visual Equipment Co., Inc., Lincolnwood, Ill., has expanded its coverage to include the upper one-third of Illinois with the acquisition of the audio-visual division of Lundgren's, Inc., Rockford.

A camera store chain, Lundgren's is owned by Gene Lundgren, a pioneer of more than 20 years in the audio-visual field. Lundgren's complete audio-visual division staff is being retained by Midwest Visual to serve the Northern Illinois area.

According to Midwest Presi-

dent, Helen S. Roberts, the acquisition adds 19 counties to the six counties which the audio-visual dealer presently serves in the Chicago metropolitan area.

Capital Systems Adds Capital Film Services

Newly formed Capital Systems, Inc., has acquired all of the outstanding stock of Capital Film Services of Lansing, Mich.

Capital Film Services is now a subsidiary of Capital Systems, Inc., presently involved in a comprehensive expansion program headed by T. James Herrmann, newly appointed president.

Capital Systems plans expansion into the areas of educational programs, film production and film processing.

United Communications Forms Production Division

United Communications Corporation, Jenkintown, Pennsylvania has formed United Film Productions to handle the production of industrial films and television commercials.

The new division is headed by John Heidenreich, executive vice president.

From the pioneers of rear-screen projection

Advanced audio-visual film projection systems

SLIDES

BUSCH Cine-Slide Projectors have many special features, including: Big 14" x 14" built-in Daylight Screen; 80-slide capacity; automatic or manual operation with Kodak Carousel projector. Available with or without sound unit. The Busch Cine-Slide Projector is versatile, dependable, portable and lightweight.

16 MM

BUSCH Cinesalesman self-contained, continuous 16mm projectors are dependable, portable, versatile. Available in variety of models to meet any requirement for continuous or rear-screen projection. Unit has 20 years of proven performance with many patented, exclusive features found only on world-famous Busch Cinesalesman projectors.

BIG SCREEN

The Big Screen 16mm continuous BUSCH Cine-Educator Projector is dependable, self-contained, mobile and beautifully finished in Walnut Formica. Special features are: push-button start; automatic cycling stop; auxiliary cooling system, and high-quality sound. Heavy-duty projector units with many exclusive features. This unit can also be supplied with Slide Projector in place of the 16mm Projector.

SPECIAL UNITS

We have 25 years of experience in the design and manufacture of complete Audio-Visual systems for schools, business and government. We can engineer and manufacture any requirement you may have for Special Projection devices or systems such as multi-screen projection systems, synchronized projection, complete remote control or projectors and many others.

CREATE THE Right MOOD EVERY TIME with the "MAJOR" PRODUCTION MUSIC LIBRARY

"MAJOR" offers you a full
65 hours of background
production music for titles,
bridges, background—for
scoring, editing, recording and
dubbing music for your:

- FEATURE PRODUCTIONS
- DOCUMENTARIES
- TV FILMS
- SLIDE FILMS
- ANIMATION
- INDUSTRIAL FILMS
- SALES PRESENTATIONS
- COMMERCIALS
- EDUCATIONAL

"MAJOR" specializes in sound
—you get exceptional technical
know-how and beautifully-
recorded original music on
LP records or 1/4-Inch Tape,
or on 16 or 35mm Mag.
Tape ready for a mix.

IMPORTANT: "Major" owns its own
copyrights on all production mood
music in its library. World rights
available to you on a completely
sound legal basis. Re-recording rights
available on a "per selection" or "un-
limited use" flat fee arrangement.

of advertising and public relations, Leach Corporation; Charles Palmer, executive producer, Parthenon Pictures; William Northridge, vice president, Ramsey Advertising; and J. A. Wright advertising manager, Essex Manufacturing Company.

Plane-Mate, the 8½ minute motion picture which won the AIA's Best Industrial Picture of the Year Award, covers 30 years of airline history, but carefully leaves room for Budd's solution

to one of the air transport industry's fastest-growing problems.

The film, all live action, took just 13 working days, from conception to delivery of answer print. First showing of the picture took place at the opening of the Budd Company's mock-up of its *Plane-Mate*, a self-contained "boarding area on wheels" capable of shuttling between airport terminals and airplanes with from 100 to 150 passengers at a time. *Plane-Mate*, according to Budd, can be positioned in seconds to fit any terminal gate, or any airplane now in operation or in prospect. It is aimed at giving "instant expansion" to any airline passenger-handling facility.

Budd asked Donati & Friends, Inc. for a film which could be shown in the mock-up to groups of prospective purchasers, and which could be shown in other settings as well, to accompany detailed sales presentations by company officials.

Donati & Friends came up with an abstract view of the airline story, involving two young actresses and 117 individual, varicolored blocks of wood. Following the narrator's lead, the actresses place the blocks, representing terminal structures and planes, on an airport, showing how the pace of air transport has grown in size and complexity. The stars of the picture—ten blocks representing *Plane-Mates*—come onstage, much in the manner of the U.S. Cavalry in a western, to save the airline from profit-killing, temper-fraying airport delays.

The film was narrated by Howard daSilva. It was conceived and written by R. H. Sutherland, shot by Mike Konkos and Bob Swenson, and produced and directed by William Donati. Supervising for Budd were Michael Heffner and Paul O. Sichert. Other Friends were in attendance throughout.

"PLANE-MATE"

BEST INDUSTRIAL

Plane-Mate, sponsored by the Budd Company of Philadelphia, has been named the Best Industrial Motion Picture of the year in the 3rd Annual Industrial Film Festival run by the Association of Industrial Advertisers. The Budd Company film, which was produced by Donati & Friends, New York, was selected from an entry list of 55 films submitted to the AIA. Additional award follow:

Second place: *Color Sells*, sponsored by Therimage Division, Dennison Manufacturing Company, Framingham, Mass., and produced by TR Productions, Boston.

Third place: *Public Transportation — Who Needs It!*, sponsored and produced by Southern California Rapid Transit District, Los Angeles.

Merit Award: *Subject: Packaging*, sponsored by Forest Products Division, Owens-Illinois, Toledo, Ohio, and produced by Oldsholl & Associates.

A special Pioneer Award was presented to *Why Man Creates*, sponsored by Kaiser Aluminum and Chemical Corporation, Oakland, Calif. It was produced by Al Bass & Associates, Los Angeles.

Chairing the board of judges who selected the winning entries was Marvin Bryan, executive producer of Wonderland Productions. His group of judges included Beverly J. Johnson, director of advertising and public relations, Leach Corporation; Charles Palmer, executive producer, Parthenon Pictures; Wilton Northridge, vice president, Ramsey Advertising; and J. A. Wright, advertising manager, Esch Manufacturing Company.

Plane-Mate, the 8½ minute picture which won the AIA's Best Industrial Picture of the Year Award, covers 30 years of airline history, but carefully leaves room for Budd's solution

to one of the air transport industry's fastest-growing problems.

The film, all live action, took just 13 working days, from conception to delivery of answer print. First showing of the picture took place at the opening of the Budd Company's mock-up of its *Plane-Mate*, a self-contained "boarding area on wheels" capable of shuttling between airport terminals and airplanes with from 100 to 150 passengers at a time. *Plane-Mate*, according to Budd, can be positioned in seconds to fit any terminal gate, or any airplane now in operation or in prospect. It is aimed at giving "instant expansion" to any airline passenger-handling facility.

Budd asked Donati & Friends, Inc. for a film which could be shown in the mock-up to groups of prospective purchasers, and which could be shown in other settings as well, to accompany detailed sales presentations by company officials.

Donati & Friends came up with an abstract view of the airline story, involving two young actresses and 117 individual, varicolored blocks of wood. Following the narrator's lead, the actresses place the blocks, representing terminal structures and planes, on an airport, showing how the pace of air transport has grown in size and complexity. The stars of the picture—ten blocks representing *Plane-Mates*—come onstage, much in the manner of the U.S. Cavalry in a western, to save the airline from profit-killing, temper-fraying airport delays.

The film was narrated by Howard daSilva. It was conceived and written by R. H. Sutherland, shot by Mike Konkos and Bob Swenson, and produced and directed by William Donati. Supervising for Budd were Michael Heffner and Paul O. Sichert. Other Friends were in attendance throughout.

By O. H. Coelln

Mission Europe: a Preview of the 10th Int'l Industrial Film Festival

BUSINESS SCREEN renewed old acquaintances and visited with new friends in Western Europe during our annual summer pilgrimage to the Continent. "Mission Europe: 1969" included CINE contacts on behalf of the U.S. film festival clearing house; the Council on International Nontheatrical Events; updated looks at the state of the industry in burgeoning West Germany, Holland, Switzerland and France, and very depressing day's journey through East Berlin, behind the Wall.

We shared the glory of Apollo 11's historic moon landing with a cheering throng of Berliners watching the satellite-beamed images on a Philips TV receiver in the lobby of the Bristol Kempinski on Sunday evening, July 20. At Cologne, Hamburg, Amsterdam and Paris Europeans were enthusiastic beyond anything we've experienced in the past five years of annual visits! All it took was our American accent to get a broad smile and salute to the gallant astronauts from business leaders, waiters, cabdrivers and hotel people!

No question about it: one top leader in European affairs summed it up when he said: "*Apollo 11 and its proof of your country's tremendous genius in technology did more for the United States than a decade of Aid and propaganda!* The Soviet's ill-fated crash of Luna, at first indicating an attempt to match the American success, was nearly as complete a disaster as their Czech invasion.

Prime targets for our July visit to West Germany were organization headquarters at Cologne and the showcase in Berlin for the forthcoming 10th International Industrial Film Festival coming up November 11-15. The United States will compete in all categories with 15 entries. Win or lose, the "best of U. S. industry" will be screened in what is easily the finest meeting hall in the world: Berlin's *great* Congress Hall. And a warm welcome to a U. S. delegation was assured by this year's Festival hosts: the principal West German industry organizations and the City of West Berlin.

Key figures from German industry, busy with arrangements for this worldwide gathering of topflight industrial film-makers, sponsors and distributors, are Dr. Hugo Ritter, of the Bundesverband der Deutschen Industrie E.V. and Will Riesenber, with whom we visited at Bundesvereinigung der Deutschen Arbeitgeberverbände headquarters, in Cologne. Our National Association of Manu-

Auditorium: Congress Hall in West Berlin

facturers' people in Manhattan should see the towering new building which will shortly house West Germany's industrial association along the banks of the Rhine in Cologne!

And the important role accorded television in the Federal Republic was emphasized by the square block of shining white buildings for the new studios, offices and equipment of that government's regional Television Centre in this almost completely rebuilt and building city. Even the hallowed Dom square in front of the great Cathedral is the site of a huge pit where an underground parking garage is being built. Across the Rhine, the sprawling exhibit halls where we toured the biennial Photokina show last fall, lay silent awaiting the 1970 show! Short of workers pressing for time and long on Europe's "hardest" currency, the West German mark, the resurgence of this country's cities and industries is a most fitting backdrop for this fall's Industrial Film Festival.

A Pan Am jet threaded its way into the fairly tight confines of Tempelhof for our pre-Festival tour of West Berlin's awe-inspiring "Kongress Halle" and other visit around and about this beleaguered area. For those who contemplate joining a U.S. delegation to the fall meetings and showings we'll try to recreate our impressions of what is easily the finest meeting center anywhere.

Berliners call the Congress Hall the "Pregnant Oyster" with good reason. The circular slanting "free form" roof looms high above an imposing plaza. Beneath are a main auditorium which most comfortably seats 1,260 persons (or provides table-style seating for 600) and a large "lecture room" seating 392 (or 200 at individual tables). Seven additional conference rooms range in size from accommodations for 150 persons down to rooms which seat from 18 to 30.

The main auditorium, large lecture room and two of the largest conference rooms all equipped for simultaneous translation every seat in five languages! This priceless set for international showings and meetings served from the same number of translator booths above each facility. Plug in your phones and pick your channel!

Acoustics were so good that we even tried the proverbial pindrop while standing at the back of the auditorium. No planner of meeting rooms or corporate theaters, schools, etc. could be without the colorful brochure describing in detail this model for either domestic or international programs.

The Congress Hall is literally a symbol of freedom, a forum for free discussion and exchange of ideas, dedicated to the memory of Benjamin Franklin. Enshrined are Franklin's words:

"God grant that not only the love of liberty, but also a thorough knowledge of the rights of man may pervade all the nations of the earth, so that a philosopher may set his foot anywhere on its surface and say "this is my country."

It was designed by the American architect Hugh A. Stubbins and erected in 1956-57 in cooperation with two Berlin architects, W. Wittmann and F. Mocken as the United States' contribution to International Building Exhibition: Berlin 1957. This year's Industrial Film Festival gathering will be the second time that event has been held in the Congress Hall.

Film projection is provided, of course, for all gauges in every dimension, from 70mm to smaller gauges as well as five types of slide projection. Simultaneous translation in five languages can also be switched through a central control room to every conference room. The five smaller conference rooms are equipped with loudspeakers, also served from the central control area. Radio and TV broadcasters have both studio and transmission equipment at their disposal in the Hall. And the Pressroom facilities were so inviting we wanted to do our columns from the Hall until November.

Crowd control will seldom be a problem in the Congress Hall. Spacious outer lobbies, linking a very large Exhibition Hall (for booth setups, etc.) lead to sitting rooms and lounges, the very large and efficient checkrooms and inviting main restaurant and bar facilities. There's a complete post-office with booths for local and long distance phoning. The Federal Post Office, which handles Germany's phone system, has a standby exchange with 18 additional booths and a telex installation ready for use when required.

The wreckage of war still pervades in both Berlins but the decay is most evident beyond checkpoint Charley, now the sole entrance from the West to the dubious "glories" of the East. On a bright Sunday when Apollo 11 neared the moon's surface, when West Berlin's sidewalk cafes, her lovely Zoo and wide avenues were thronged with young and old, only handfuls of East Berliners were out. A final postscript on Berlin must include mention of two events: a visit to the U.S.

mission opposite the U.S. military base well away from West Berlin's center and conversations with Dr. A. Bauer, organizer of the theatrically-oriented Berlin Film Festival, on behalf of CINE. At the U.S. mission, we chatted with John L. Sandstrom, Information Unit Chief for the U.S. Information Service and at his suggestion visited Amerika Haus, in "downtown" West Berlin, where a large and well-patronized U.S. informational film library is maintained. Mr. Sandstrom, please note, has a real need for a good videotape console. Pickups of East Berlin television programs, frequently featuring North Viet Nam propaganda films, as well as other TV fare, would be greatly facilitated by acquisition of this gear.

By jet again, swiftly up out of Tempelhof and within the hour into Hamburg's spacious air terminal, Berlin memories a mixed bag of elation and despair. The battle against the noose laid around the gallant symbol of Western tenacity and love of freedom is a very costly affair, not only in terms of garrison troops but in subsidies necessary to attract youth to its schools and factories and to provide for a large and steadily-growing segment of elderly Berliners. Berlin industry must also be subsidized to offset the high costs of East-restricted rail and water transport. Raw materials going in and finished products outward bound pay tribute to East Germany.

Hamburg is a different matter. Beautiful homes and gardens of those who have attained riches in a little over two decades since the war, line the banks of the placid Alster See. The great harbor is filled with the shipping of the entire world. And producers, like the highly-creative and well-patronized Gong-Film Studio of Bodo Menck (a top prize winner at last year's International Industrial Film Festival in Vienna), are actively at work. A very good new DuPont (Deutschland) EastmanColor film *Linien-Geheimnisse* has just been completed by Menck. Promoting Lycra textiles, *Linien* may well win screen time in U. S. theatres. It was shot aboard a tour liner, with some eye-filling sequences in salons, along the decks and around the swimming pool. Fashion scenes abound with pretty girls to match!

To Amsterdam, with its never-to-be-forgotten Canals and great Museums. And then to Paris, Versailles, the Champs and a final Sunday afternoon atop Montmartre on the steps of Sacre Couer! You can devalue the franc but you can't repress the Parisians, like the cab driver who wheeled us out to Orly for our homebound flight.

We were well out on the new freeway when he turned to us with a broad smile:

"Voila, m'sieur, you are American, no? I see your astronauts on the moon, it was very thrilling. Vive Apollo!"

Good to be an American. Good to have shared our all-too-few weeks with the people of Europe and never have a bad moment. No surly waiters, no unwilling porters, nothing but the constant reminder that, with all our faults, the U. S. has millions of friends in Europe with long memories, most of them in our favor. —OHC

Cindy Entries Set Record

Ira Thatcher of United Airlines, IFPA Film Competition Chairman, states that this year's entries far exceed those of any previous year. "Broadening the categories has opened our competition far greater than we expected," stated Thatcher, who added that the films are currently undergoing screenings at the various chapters. Winners of the highly sought after twenty four Cindy Awards will be announced at the awards banquet climaxing IFPA's annual conference, October 18th, in San Francisco.

Joseph Mascelli (left) demonstrates unique lighting approach using W.F. Carter as a model.

More Participation Invited

More and more lately there have been joint meetings between IFPA and other creative and technical societies. In San Diego, for example, the July meeting was attended by SPIE members of the area, invited to share the talents of Joseph V. Mascelli, author of the book "The Five C's of Cinematography," who asked for reactions to a few unique lighting concepts and approaches he plans to fully expand in a forthcoming book. In August, SPIE, SMPTE, and the Art Directors Club, with guests and families, will be invited to enjoy a delightful and revealing evening with Eustice Lycette, head of Special Effects Department, Walt Disney Studios. Young and old, artist and craftsmen, operators and engineers, both creative and technical will watch excerpts from *Mary Poppins*, *The Gnomemobile*, and *The Love Bug*, and will learn the how's and why's of movie magic, and specifically the sodium screen process.

This year we are exchanging display areas with other groups at annual and semi-annual conferences and symposia. We can all learn from each other. The free exchange of ideas is the basis of our national philosophy and can make more effective our contribution as responsible film makers.

We invited other creative and technical information film and television groups to communicate with us, share with us, and yes, even socialize with us. We have common interests, goals, and aspirations. The interchange will enrich each participant and provide a catalyst for professional growth. How about the producers association in New York? And the society in Philadelphia? And your group? Write to our Executive Director, Ralph Hall and our Chapters Vice President, East or West, will respond.

Herschensohn Reports on Moscow

After a "shut down" for the summer, the Washington D.C. chapter of IFPA opens the fall season with a meeting that is a must for members and guests.

To be held at offices of USIA, meetings will be on 2nd Thursday, 11 September 1969. Bruce Herschensohn, director of motion pictures and TV, USIA, and chapter chairman, will be in charge of the program. Recently returned from Moscow, he will give a report on the Moscow Film Festival.

Boston Chapter Chartered

The Boston Chapter of Information Film Producers Association was installed July 23rd at a dinner meeting at Boston's Red Lion Grill. Art Rescher, IFPA-Vice President, Membership-East, of Washington, installed the chapter and Bob Scott, Chairman of IFPA's Board of Governors, outlined benefits which would come to its members by active participation.

Robert Berman, head of Magna Film Productions, Inc., of Boston, was elected and installed as chairman of the new chapter. Edward Palmer, director of audio-visual productions for New England Telephone Company was named secretary-treasurer, and Jack Eads, head of Communication Arts, Inc., was elected vice president. George A. Wells of the Massachusetts Department of Commerce and Development was named as

publicity chairman and Paul Holzwarth of Communication Arts was chosen membership chairman.

Nineteen members were present for the initial organization meeting of the Boston Chapter.

A "Let's Get Moving" meeting will be held in September at a date yet to be set.

Conference Planning Continues

Dick Foster, conference chairman, and Bill Blume, program chairman, are in the final stages of planning and preparing for the annual conference to be held in San Francisco at the Sheraton Palace, October 16-18.

Foster announced that Headquarters Sixth Army will co-sponsor the conference in keeping with IFPA's government/industry interests. In a letter of endorsement, Lieutenant General Stanley R. Larsen, Commanding General, states:

"The conference program indicates a most interesting departure from past treatment of information films. It is noted particularly that the technology of film making for the Apollo moon mission will be among the several fields of interest presented at the conference."

Blume announced that Col. Stanford Roberts, Ass't. Chief of Staff, for Communications and Electronics from the Pentagon, will speak on "The New Look in Audio-Visual in the Army." In addition, such personalities as Mayor Alioto of San Francisco, Bruce Herschensohn of USIA, Professor Lewis and Kemp of San Jose State and Al Chopp of NASA's Manned Space Flight Center will present stimulating and diversified discussion on films and audio-visual communication.

Advance programs and registration forms will be sent to members soon. Non-members who are interested in attending the conference are invited to write the IFPA National Office.

Arthur Miller Visits San Diego

A most pleasant surprise visit was paid to the San Diego Chapters' July meeting by the three time Academy Award Winner for Cinematography, Arthur Miller. He will always be remembered in the motion picture Hall of Fame as the "dare devil cinematographer" of the *Perils of Pauline*. His awards were won for his cinematography in *How Green Was My Valley*, *Song of Bernadette*, and *Anna and the King of Siam*. His dogged search, tenacity, and determination accounts largely for the present existence of the Motion Picture Museum of the American Society of Cinematography.

Miller shared a few anecdotes of the past with the group that was present.

For his many contributions to the motion picture industry, Mr. Miller was presented with an IFPA active membership card and certificate, becoming the fifth oscar winner to become affiliated with IFPA. "I'll hang it right on my wall," Miller said, as Host and Vice President Bob Montague was making the presentation.

Some of the Important Capabilities of Consolidated Film Industries

Eastman Color Processing

35mm and 16mm including release prints. Dailies and release printing.

Titles

Creative design—theatrical, TV, and non-theatrical.

Optical Effects

Everything from Anamorphic to Zoom.

Super 8mm

"State of the art" quality. Magnetic and optical tracks or silent.

16mm Color Reversal

Processing Ektachrome commercial film (ECO) and hi-speed Ektachrome (EF) camera films.

Filmstrips

Major laboratory control for assured quality.

Blow-ups

16mm to 35mm—with programmed timing and liquid gate.

Work Print Duplicates

direct positive—35mm and 16mm.

A-V COMPLEX FROM A HOLE

A YEAR AGO, there was a hole in the ground at the International Typographical Union's headquarters in Colorado Springs. Today, because ITU President John Pilch "had an idea" and because of the clever design work of Hal Guzofsky, head of Audio Visual Consultants, and president of Colorado Visual Aids Supply Company, that hole in the ground is a unique combination auditorium-theatre-training-conference facility.

A carpeted foyer leads into the auditorium, whose ramped floor bears 165 theater-type seats. Seats, walls, carpeting and other furnishings are a blend of excellent taste and serviceability. In front of the stage and on a lower platform are five chairs that provide seating for members of the Executive Council or for whoever else may be presiding or leading a discussion. A microphone is on the long desk before each chair.

Paneling is rich-appearing walnut. For every two or three seats there is a microphone, always in reach of anyone wishing to take part in discussion. The mikes are controlled at a console right of the stage.

At the rear of the stage, behind folding doors, are display panels and a sectional blackboard, 8' x 16', which slide horizontally into position or out of sight at the touch of a switch by the man at the console. One pair of panels is magnetic to allow easy display of informational material.

The console controls not only the microphones and screens, but also the projectors and every light in the room. Manipulation of the lights—ceiling, cove, flood and spot—sets the mood for a program or a meeting, varies them for audience participation or focuses them on a speaker or on a group.

An important use of the addition, besides that of an auditorium, is that of a theater. Behind the sliding screens and the blackboards is a 8' x 16' glass rear screen for the projection of pictures. It was lowered into place early in the construction schedule, and the building was erected around it.

The theater's equipment, coupled with the facilities of the Training Center's Audio-

visual section, will make possible the showing of any kind of film.

The projection system features the three random access slide projectors, one centered on the screen area and the other two filling the screen with side by side images. These three projectors can be manually remote controlled or programmed from audio tape automatically. The random access feature is most advantageous after a formal presentation to answer questions or reinforce a speaker's point. The console operator can punch up any of 288 slides from any of the three 96-slide projectors, for infinite combinations within a maximum retrieval time of four seconds! As a question may be asked from the floor, in anticipation, the operator can recall the desired slide, or set of slides that will help answer the question! The motion picture projector with special wide angle optical system delivers a very bright image 8 x 10' in size at the center of the rear projection screen area.

The basic audio system was designed for playback sound-on-film and sound-on-tape and also to provide voice reinforcement for speakers from a podium on the stage or from any of the five council members seated at the council table directly below the stage and between the first row of seats.

A special feature of the audio system is the 60 audience microphones, one to every two or three seats. These permit a delegate in the audience to ask a question or address the entire audience. He presses or address the entire audience. He presses his talk switch on the microphone. This indicates by a pilot light on the annunciator panel at the console his desire to talk . . . the console operator then controls the situation by switching in the desired microphone or microphones for the desired period of time which can be timed by automatic timer on console. He can make the decision which microphone to "turn-on" and when to "shut-off" the delegate that has the floor, etc.

The special volume controls in the console allow the operator to compensate for

Part of the projection equipment in the booth behind the rear screen.

Auditorium is shown (left) during a meeting with side by side slide images on the rear screen. At right, full illumination is used during a meeting. Note control console at lower right.

ry loud or very soft speakers either in
e audience or at the council table as well
e to adjust the playback audio volume.
nally, the operator can remotely record
y part of a meeting on audiotape when
sired!

The intercom system provides a private
ndset to each of the five council mem-
ers plus one for the console operator and
e for the equipment operator in the pro-
duction booth. Thus, private exchanges can
be made during a meeting when required be-
ween any of these parties.

A carefully designed lighting system pro-
vides twelve separate lighting circuits which
clude general flourescent room lighting,
all washers, indirect cove lighting, special
wn lights over the aisles and over the
dience areas, special spotlights over the
ouncil table, speaker podiums on stage and
er the display panels, each of which is on
separate motorized dimmer with a master
erall dimmer control so that any level of
hting or combination can be achieved for
ifferent types of meetings or presentations.
l can be remotely controlled from the
nsole.

Plans for the auditorium were adapted
om the very latest in ideas that have been
ed in a number of similar installations
ver the United States. As a result, the addi-
on is complete, efficient and economical.
s construction underground rather than
boveground, for example, brought a dis-
tinct saving in production cost.

Jim Bates, head of ITU's audiovisual section checks audio rack (left). Film editing room is shown at top right and the recording studio control booth is at lower right.

EQUIPMENT USED

SCREENS: Front, Radiant AS Autoelectric 10' x 10' matte white; rear, Polacoat Lens-screen 8' x 16' x 1/2" special wide angle formula.

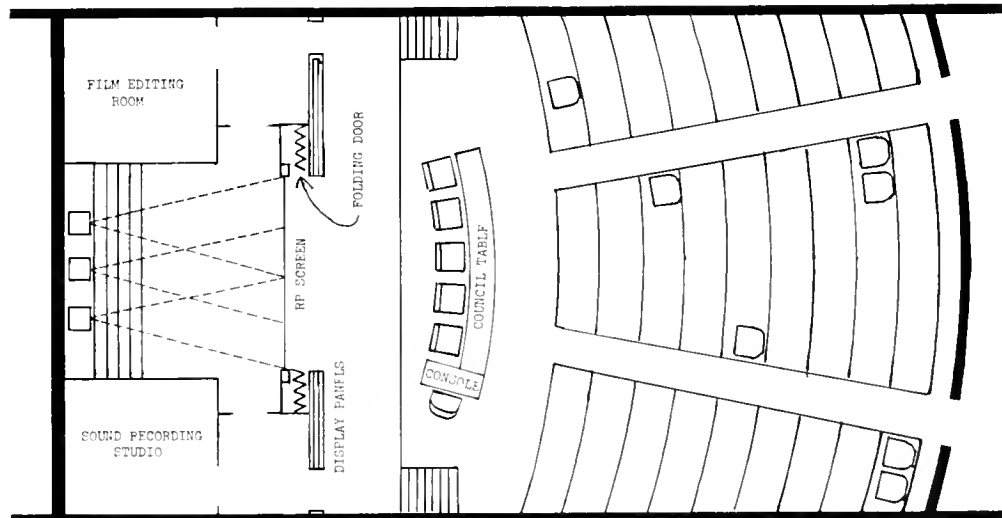

PROJECTORS: Three Spindler & Sautpe Selectroslide SLX 1200B dual random access Ultrabright units equipped with 3" F2.5 lenses; Kodak AV295 Pageant Arc 16mm with GE Arc 300 light source and power supple unit equipped with Buhl .8" ECU-RP mirror lens.

AUDIO SYSTEM: Roberts 455 3 motor remote control tape recorder Cue-Slide synchronizer, Grommes-Precision G-5 mixer/preamplifier and G-51 power amplifier; two Frazer F8-60 sound column speakers and Frazer-White #3040 equalization feedback filter system; five Norelco AKG D-200E microphones at council table; 60 Turner SR-90 microphones in audience area; and Bogen TQ-6A telephone intercom system.

CONTROL SYSTEM: Custom built console by Colorado Visual Aids featuring custom enunciator panels for control of the 60 audience microphones, a "count-down" timer for speakers, custom remote volume controls, custom controls for tape recorder, custom random access remote controls, custom controls for audio channels, 16mm and 12 lighting circuits each with motorized dimmer control. Remote controls were also provided for electric screen, folding door in front of RP glass screen and for six motor driven display panels that cover the front of the rear screen. Most controls are duplicated in the booth.

Diagrams of the ITU facility show how various elements are arranged. Longitudinal diagram above shows how facility was built to existing terrain.

Concerto for NPR and Orchestra

Shooting a hundred-man symphony orchestra that is getting paid by the hour, you obviously need to use multiple cameras, arrange to stagger the film runouts and hope to avoid retakes.

For the Bell Telephone Hour "Sounds and Sights of Chicago," Director of Photography Andrew Costikyan used three NPRs to cover the Chicago Symphony in a special concert for the show.

Two of the cameras were placed in the audience for wide-angle shots of the whole orchestra, for cutaways of the audience and for telephoto closeups of the players and the conductor.

But the director needed some shots of the conductor from the players' point of view, and some wider angle closeups of the players themselves, to provide the feel of being right in the orchestra.

So Mr. Costikyan put on white tie and tails, and sat right in the orchestra with an NPR. This meant that, for the other two cameras, he was right in the shot!

But the NPR is an unobtrusive camera, so it worked. If you saw the show on NBC-TV, did you notice that one of the performers was playing an NPR?

For an NPR brochure, write Eclair;
7262 Melrose, Los Angeles 90046.

Andrew Costikyan is the man holding

hograph. He is a member of the IATSE Chicago local 666 and has been a first cameraman for 22 years.

USAF PENTAGON PRESENTATIONS

By **LT. COL. J. C. STOKES**
Chief, Presentation Division
Directorate of Administration

The Hq USAF CCTV studio. Videotaped briefings are transmitted on call to viewing monitors in key rooms and to nearby Andrews Air Force Base. Two-way conference participation expedites briefings and discussion.

The Air Force War Room in the lower regions of the Pentagon is open around the clock. After hours calls for key personnel are received here and direct lines connect the White House and Air Force Commands.

THE SOLE MISSION of the Air Force Presentation Division in the Pentagon is to assist the Air Staff and the Office of the Secretary of the Air Force to improve briefings, speeches and other presentations made by officials in Air Force Headquarters.

I think this Division is unique. It is not quite a complete AVCOM package but with TV and motion picture services available through other offices it comes pretty close to it. I don't know where else in the military, or the federal government for that matter, such an AVCOM package can be obtained.

The Division can produce a presentation live, using film, photo and foil slide projectuals for instant response and then can record the same for later documentation. We can in turn produce this on video tape through Hq USAF closed-circuit television facilities, and by local or contract arrangement further reduce this to either 16mm or super 8mm film for distribution to the field.

Thus, we can make presentations available for all size audiences. The video tape, for example, can be shown in monitor equipped offices, rooms and theaters in the Pentagon. The 16mm kinescope provides viewing for all audiences where video tape facilities are not available and super 8mm projectors can be used for individuals or small groups.

These methods can provide viewing for up to 500 people, if necessary, or down to one person who wants to review a presentation on his office wall. In the latter instance, super 8 cartridges are especially compact, easily filed by subject, and portably projected for self-indoctrination by a new employee. In this manner, we offer a capability not to replace a live speaker but to supplement, augment him to allow his message the flexibility to reach any audiences — locally and Air Force-wide.

The Division's key personnel are idea people, creative people. Their job is to interface with the customer and help him create a convincing character as an Air Force spokesman.

This Division provides three different but complimentary types of service — or any combination thereof — through its three branches.

One is the Writing Branch which will handle all types of writing, editing and publishing for presentation purposes. But these people are more than writers . . . they are what the Air Force calls "Presentation Advisors." That title may seem ambiguous but it identifies talent above writing, per se.

They advise Air Force presenters on platform personality and speaking techniques. They critique both the speaker and his presentation. They study the audience which he will address to determine its characteristics and any Air Force elements on which that audience may be misinformed or ill formed. They study the hall or theatre in which the presentation will be made for audio and visual characteristics.

The Division's elements of art and layout are available through the Graphic Arts Branch. Designers and illustrators offer such visuals as vugraphs, flip charts, slides, photography and display art, and they provide similar services in art, layout and typography for presentation purposes. The Visual Information Specialists collaborate with the Writers on projects containing both words and pictures, and they work with the project officer in cases involving illustra-

USAF executive conference room features wide screen rear projection and illuminated wall displays. The AF Secretary's office is beyond door under clock. Visiting officials use this facility.

THE AVCOM CONCEPT

One of two USAF theaters served from one projection booth behind the rear screen in each room.

This general purpose conference room seats 80 and is one of several equipped for front or rear screen projection, CCTV monitors, charts and chalk boards.

One of several briefing rooms adjoining Hq USAF TV facility. It includes smaller CCTV viewing rooms.

Partial view of projection equipment behind rear screens of multi-media conference center shown below.

Multi-screen presentations are viewed by top Air Staff officials and Joint Chiefs of Staff on occasion in this conference center. Tiered theater seats accommodate spectators in the rear.

The Air Force has been in the vanguard of those exploring the new concept of Audio Visual Communication (AVCOM) to determine its values for its own purposes. It has found many values and has launched upon a prototype program in AVCOM.

AVCOM is fundamental but its techniques are subtle — and sometimes vital — and its effects pervasive. Today's version updating the old Chinese proverb might read, "One picture with the right words is worth a thousand votes of confidence." AVCOM hits that target.

The Air Force knows that audio visual communication as the latest form of human communication is here to stay. And that many so-called experts, even some in its own ranks, fall far short of what should be called a true professional.

In view of its stance as big business the Air Force obviously uses the electronic wings with the speed of light primarily for management information, for decision making purposes and for command control. In the Pentagon, what is generically called the management information process also is vital to our AVCOM links with the President's Executive Office staff and with committees of the Congress.

These demand audio visual communications at their best in order to obtain the fastest means of data synthesis and information assimilation. The audio visual communicator has a unique value for such matters as we try to integrate various human and electronic information bearing media to effectively transfer thought and expressions be-

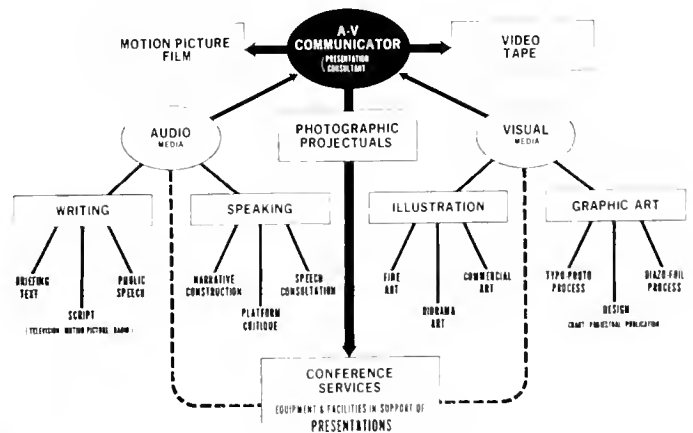

tween people or groups.

In our concept of AVCOM, representing the executive client and using the total military service resource, brings all Audio Visual Communication specialist elements together into a single team. Practitioners in today's components are learning to work together to plan and produce a complete word picture product utilizing all the existing media as required.

This in turn, we feel, points up the need for making the audio visual communicator a separate entity — to establish AVCOM as a clearly defined profession with its practitioners so-named. No longer should these experts work separately in the isolation of photography, in television, in motion picture films, in film libraries and laboratories, in graphic arts, in speech and written communications. Now these "pros" should be integrated into a coordinated, well managed AVCOM team to provide the best and most effective use of all these limited resources in concert. This concept calls for the establishment of career development within the broader AVCOM field in Civil Service and military grades.

Under the AVCOM concept, the professional may develop and progress through any of the components of this basic family, but as he progresses toward the top he moves from the role of specialist to that of a generalist with a working knowledge of all of the technological, creative and productive elements which may help improve the integrity and quality impact of any given presentation. He has then developed into a professional audio visual communicator. ■

The AVCOMMUNICATOR'S Functional Spectrum

USAF presentations . . .

continued

tions only. The staff occasionally produces scale models, oil and water color paintings, diorama displays, a variety of scrolls, certificates, brochures, program booklets, cover designs, layout and art for printed publications.

The third Branch is Conference Services. This Branch maintains a film library which has approximately 700 Air Force films for loan and has access to all Air Force and other Government films. They also have facilities and technicians for cutting and splicing film clips to aid the presenter.

They can loan 16mm and cartridge type super-8 sound motion picture projectors, overhead projectors for vugraphs, and slide projectors and provide personnel to operate the equipment or instruct the "customer" in its use. They also loan or operate tape recorders for recording, reproduction and playback of oral presentations and for use in conferences.

And the *Presentation Division* has several large and small conference rooms as well as two theaters equipped for use of video

monitors, still and motion picture projectors.

The Presentation Division continuously studies the AVCOM profession, both in and out of government, in search of new tools and techniques which might help do the job better or faster — or both. Let me give you some illustrations of the benefits derived from this realization.

An important new advance in rapid visual aid production being used by the Air Force Presentation Division is a new color-in-color dry process for reproducing multiple colors simultaneously from letter-size art work. A color glossy print can be made in seconds. It will also cycle to reproduce from a color original or print to a negative and transparency suitable for projecting on a screen. The system is completely dry . . . it needs no chemicals or plumbing. This greatly expedites high-value color reproduction capability in economic support of our writers and illustrators.

Still another innovation provides for a sound-slide projector system. In this case, around the picture of each slide is recorded

the audio message for that particular picture. The sound slide projector with a built-in sound system permits considerable flexibility to the organization of a briefing. Unlike film, any one picture and/or its message can be changed without disturbing the rest of the presentation. Or the slides can be re-arranged easily.

Other new equipment permits easy integration of slides and films into a single tape-controlled briefing package which does not require the attention of an operator once the button is pushed.

Still further flexibility is newly available to the presentation expert or the audiovisual communicator in a new type of hand-held projector. This particular inexpensive projection system allows the individual the opportunity to stop motion and to view single frame, backup to view a particular motion, or to play back scenes. This type of low-cost personalized viewing mini-projector can be issued to personnel for individualized training purposes.

Computers are now being developed which will generate three dimensional motion pictures. Previously, animated film were made a frame at a time. Now, however, special photo-optical equipment under control of a high speed digital computer is being used to generate animated motion pictures. We are studying this.

Training — On The Move

"Look," said the North American Van Lines agent, "If the customer wants her pussycat taken to the airport, we'll take her pussycat to the airport!"

That "Customer be served" attitude was representative of the working philosophy of fifteen of the leading agencies of North American Van Lines, interviewed this year as part of the research for a new series of training filmstrips. The interview was conducted by Sumner J. Lyon, the film's writer, who was sent all over the United States at the joint recommendation of Cal Dunn, veteran film producer, president of Cal Dunn Studios of Chicago, and Bill Baker, manager of Agency Training for North American and an authority on customer relations.

North American, which has the only full-blown Agency Training Department in the moving industry, has been concerned with a deteriorating image of the moving man in the eyes of some Americans. There has been some unfortunate publicity on the moving industry as a whole and North American Van Lines, so Jack Schang, vice president of marketing, decided to take a positive

stand by instituting a new long range personnel training program to improve the quality of service to its customers.

While North American was aware of the needs of its customers and how best to serve them, the company felt it would be wise for the writer of the films to get some first-hand "dope" from successful agents. Therefore, Lyon went from coast-to-coast, "picking the brains" of agents whose list of satisfied clients indicated that they knew "something special" about how to conduct their businesses. That "something special" turned out to be the simple fact that "the customer comes first."

It was clear to everyone concerned with the training program that the films would serve personnel best if they helped them serve customers better. Six films were scheduled for production for 1969. One of the films in this series is, naturally, *The Customer* — an exposition of the emotional state of the average housewife who suddenly finds she has to move. Being uprooted, and sometimes upset, the housewife has problems and worries which the moving company representative

must understand, and with which he must sympathize. He must respond to her doubts and fears with the help and services she is looking for, and needs. The agent, or his salesman, may have to show the customer what it is that she really needs in the way of services.

The other films in the 1969 series are also customer-oriented, with recommended attitudes, procedures and hints for improving employee service and increasing customer satisfaction.

North American's long range program of training slidefilms began last year, in 1968, with a series of six films dealing with various phases of packing and loading. These, as the subjects indicate, were designed primarily

to increase technical skills. Nevertheless, customer relations is always consciously maintained as a major factor, no matter what function or employee participation is being explained.

When North American's Bill Baker was asked for his evaluation of the film program, he said "We're very proud of our film strip training program. Training has never been easy. But we put a lot into it and . . . the filmstrip program is getting the job done."

"I've been in the training business a long time, and I've never seen a training program so enthusiastically accepted by such a large number of people. When thousands of people ask for more, you know you are on the right track."

Filming a scene for the training filmstrips on location with moving crew

Power Forum Suggests Electric

ONCE EVERY FIVE years Westinghouse Electric Corporation holds a Future Power Forum designed to provide information and ideas concerning projected load requirements of the utilities industry in years to come. Always a major public relations consideration for the company, the Power Forum is given before a group of top investment electric utility company executives in Pittsburgh, and once later to government power authority officials in Washington.

This year, the Sixth Future Power Forum was premiered on Feb. 10-13 at the Hilton Hotel in Pittsburgh with the purpose of stimulating its audience regarding the future possibilities of the electric utility industry. It pointed out many of the steps the industry can take to continue to provide reliable and efficient power despite the tremendous and almost overwhelming increase in demand. It also showed how the electric utility industry can improve the ecology of the land. The Forum is totally "soft-sell" with no sales or product pitch.

For the two-day sessions, Phil N. Ross, manager of Westinghouse Power Systems planning, and producer George A. McNulty, vice president of the Walter O'Connor Company, of Harrisburg, Pa., gathered together a presentation composed of a live show with original words and music performed by a cast of eight Broadway and TV musical performers, several motion pictures, and over 2000 slides, to explain Westinghouse's ideas on such subjects as rapid transit, waste disposal, pollution, beautification, electric living, safe living, and other desperate problems of urbanopolis."

The O'Connor organization, which has a long and successful background of cooperation with Westinghouse on presentation and training work, put the live performance features of the Power Forum together in New York rehearsal halls using top Broadway song writers, stage directors

and choreographers, while film production was carried out by the company's new and extensive facilities in Harrisburg. In addition, O'Connor supplied all projection equipment, labor and staging facilities used in the shows.

Following the two Power Forum live presentations, the show went into the O'Connor studios in Harrisburg where a motion picture was made of most of the musical numbers to be incorporated into a half-day meeting Westinghouse will travel to other utility management personnel in regional meetings throughout the country.

According to response from the utility executive audience, the show was a resounding success. Here are several excerpts of letters received by Westinghouse from important customers:

► "The program was excellent in every respect. The presentations by the Westinghouse people were interesting, informative, and very much to the point of our concerns. The skits were a most delightful part of the program and provided an ongoing theme for the Forum. The eight participants were very talented and added a great deal to the presentations. Altogether, the show was better than many a one that appears on Broadway."

► "The program was informative and enlightening, and I particularly enjoyed the very interesting manner in which the presentations were interspersed with good music and humor."

► "The entire presentation showed the obvious results of a tremendous amount of research, good planning and fine staging. The use of your excellent theatrical production added a fine touch to the whole affair, and made an otherwise fine affair an outstanding one."

► "Your Sixth Future Power Forum was filled with good information and new ideas and it made all of us in the electric utility business grateful to have a 'Westinghouse' for a partner."

No one could ask for more than that. •

Utility Future

Westinghouse's 1969 "Power Forum" for electric utility executives provided an advance look at future demands for power in terms of many desperate problems to be faced. A filmed version of the successful presentation is being shown regionally.

THE CASE FOR KINES

By RALPH COSTLOW
Manager, A-V Department
Motorola Semiconductor
Products, Inc.

This is the film editing area at the Motorola studio in Phoenix.

THE TRADITIONAL audio-visual presentation techniques — films, slides, tapes, etc. — have all won a useful place for themselves in industry by satisfying the objectives of a wide range of communications needs. Now, a new fast-rising star in the audio-visual spectrum, the Kinescope recording, has established a foothold and is growing like a prairie fire. This versatile new tool is being ingeniously used to meet demands for a method for producing films on very short notice, at extremely low cost, and with ultra simplicity of production.

An example of a unique application of the Kinescope can be found at Motorola's Semiconductor Products Division in Phoenix, Arizona. With semiconductor technology expanding at an explosive rate, the company finds itself introducing highly complex new electronic components aimed at every segment of industry at a rate of some 30 to 40 new devices *each month*. The task of communicating the details of each product to the company's 150-man sales force in some 35 separate office locations has grown to staggering proportions.

At first Motorola approached the problem using conventional means, such as district, regional, area, and national sales meetings. These meetings were liberally supplemented by individual "product bulletins" mailed to each man at the announcement of a new device. But, with the growing complexity of Motorola's product line (Motorola is the largest U.S. semiconductor manufacturer and has the broadest line), sales personnel were forced to devote an ever-increasing amount of attention to acquiring product knowledge with a resulting decrease in sales efficiency. It was concluded that some form of "controlled" audio-visual presentation approach would allow for maximum imparting of information — with minimum waste of sales time.

Slide-tape presentations were first considered. However, it was felt that the inability to use "motion" as one of the production techniques would prove to be too great a shortcoming over the long run. Motion picture films, themselves, were discarded as an approach — inasmuch as they did not allow for immediate evaluation of the material just filmed, required too much production and setup time and, as a result, would be too costly. What was needed here was an expedient means of communicating on a subject in a form that could be "discarded" after its short useful life was expended.

The obvious answer, the company felt, was to use video tape recordings. However, while VTR's would answer the needs of the program, there was a logistical problem in giving VTR presentations which require use of a bulky playback recorder plus five to ten television monitors for "screening" — depending on the number of people who would be viewing each presentation. There was also the problem of lack of interchangeability between tape recorders. Thus, Motorola turned to the Kinescope recording.

The Kinescope is nothing more or less than a black-and-white 16 millimeter movie of a closed-circuit television monitor. "Kinescopes" are not new. When the television industry was in its infancy, there was a need for a method to relay telecasts. Existing facilities, such as microwave relay systems or cable lines, were inadequate to serve all needs. There was also no means to handle delayed telecasts. Kinescopes filled the gap. As time went by, transcontinental cables and microwave links took care of the relay problem and video tape solved telecast delay needs. Kinescopes became *passé*.

One of the other immediate advantages Motorola found in going to Kinescopes was the relatively low dollar investment required to reasonably implement a closed-circuit television (CCTV) studio for video-taping. For example, Motorola elected to use a one-inch video tape system and uses the Ampex VR7800 recorder — costing about \$10,000 — as the basic component in the system. Coupled with three small studio cameras (\$3,000), quartz iodine lights (\$800), plus miscellaneous microphones, editing equipment, and minor studio support gear (\$2,500), the total cost of the studio equipment is actually little more than the cost of one top quality 15-minute color movie.

A typical production at Motorola is generated in the following manner: Concerned representatives from Sales, Product Marketing, Applications Engineering, and the A/V Department meet to discuss a proposed film or series of films to cover a specific subject. The planning is done in much the same manner as would be used

This is the view into the main studio from the control room (above). At right, monitor shows information from teleprompter. Teleprompter is shown in use (left), while "actor" in studio (below) follows cues from teleprompter as he is being filmed.

for any film endeavor, except that extensive scripting is not undertaken. Objectives and approach to be used are decided — and relative technical level of the presentation is established. (Because Motorola's products are of extremely high technology content, it is very difficult to communicate at the "right" level to a 150-man sales force whose backgrounds range from skilled engineers to "general" knowledge of specific product lines — without "talking down" on one hand or risking poor communication on the other.)

Since the films are generally of a product training nature, an application engineer who is thoroughly familiar with the customer's use of such products is used as the talent (or instructor) for each film. Each presentation is kept to no more than 20 to 25 minutes in length.

The performer outlines his script approach with the audio-visual department film production head. Together they establish the art, graphics and backgrounds (if any) that will be used. All necessary material is produced to normal television standards (black on blue charts, 3 by 4 proportioning, lettering size, etc.) by Motorola's own Graphic Arts Department.

Once the set is ready, the talent is brought in for the taping. The director and the performer do a walk-through while the cameramen look on. After this, a practice tape of several minutes is shot to give the performer an idea of how taping will proceed and also give him a chance to relax. Since he knows his subject well, scripts or notes are used only as a supplement.

The production is taped and the performer checks the playback for accuracy. If necessary, scenes are reshot. Most productions are done with three cameras and every attempt is made to use tight shots on the graphics for maximum legibility.

More elaborate productions make use of oscilloscopes, microscopes, or pieces of test equipment monitored by a standby camera. A monitor is also provided so the performer sees what is going on the tape. With the addition of a relatively inexpensive Special Effects Generator to the equipment complement, it is possible to get some highly professional effects on tapes. For example, horizontal and vertical wipes, corner inserts, and overlapped dissolves, are child's play with this type of equipment.

One of the specific problems Motorola encountered in its product training films was a means for showing the geometric patterns of some of its microscopic products, such as integrated circuits measuring only .050 inches square, yet be able to point out portions of

Continued on next page

case for kines . . .

continued

the tiny unit under discussion. Using one of the studio cameras rigged in conjunction with a microscope solved this problem. When the performer wanted to point at a specific area of the microscopic unit, a second camera focused on a pointer held against a blank wall was superimposed on the first shot. Thus, the performer, by observing the studio monitor, could move the pointer to indicate the desired area for discussion.

As might be assumed, a few of the engineers-turned-amateur-performers found it necessary to be able to read a script in order to give an adequate performance. Thus, it became necessary to devise a "prompter". To solve this problem, Motorola constructed a wooden stand with rolling pins at the top and bottom modified with crank handles. The script for a presentation is typed on a roll of teletype paper which is then wound around one of the rolling pins and the feeder end is attached to the other rolling pin. A studio camera is focused on the script stretched between the two rolling pines and the output of this camera is fed to a monitor mounted next to the performer's camera in the studio. As the rolling pin handle is turned, the script "crawls" across the monitor and the performer is able to read his material from it. This makeshift arrangement represents a total cost addition of about \$10 — yet essentially does the same job as an expensive teleprompter.

Once a filming session is completed, the tape is sent out for a film transfer (Kinescope) workprint. The workprint is edited and the negative is matched to it. Editing consists mainly of eliminating bad footage. If any of the footage needs to be darkened or lightened, those areas are indicated when the entire negative is sent out for duplication. A 20-minute show with a half-dozen prints can be created for under \$500 if no elaborate set decoration or special art is required. Shooting time runs one to two days depending on complexity of presentation format and it is relatively easy to turn

out a completed production in a week with a small crew.

There are several disadvantages to the Kinescope type of film presentation. The major drawback is that picture quality never reaches that of good black-and-white film photography. However, a giant step forward has been made in this area with the recent development of Electron Beam Recording (EBR). Simply stated, this technique uses the electronic signal from the video tape (or TV camera) to control the amount of light directed on an unexposed film. The film is then processed in the usual manner. This method of film transfer gives extremely fine resolution while still providing low cost and quick reaction time.

The problem of proper editing of films can be bothersome if you are using a single system (picture and sound transferred onto the film at the same time) approach. A compromise sometimes must be made between the picture and sound quality with the type of film used. Also, careful planning is required in editing to prevent cutting out some useful portions of the soundtrack. In addition, all splices show up on the screen. All of these problems can be eliminated, however, by going to a double system (sound on separate film) and doing "A" and "B" rolls. Optimum film can be used for picture and sound and splice marks can be eliminated. The double system approach does increase the cost and turn-around time slightly.

The advantages of Kinescopes are obvious. They provide a low cost, fast reaction method of producing films. New recorders, such as the Ampex VR7800 with electronic editing capability, eliminate the need for any editing of the film. Thus, a completed film can be created on very short notice and reviewed immediately in its entirety and processed quickly for use in emergency situations.

At Motorola, one of the first uses of this medium was the production of 12 tapes for a sales meeting, the tapes ranging from 7 minutes to 22 minutes in length — all of which were completely filmed in a 6-day period. Within 10 days, completed transfers were ready for immediate distribution.

This highly flexible capability does make a case for Kinescopes. •

Film Summarizes 6-Year Water Study

Looking ahead to the year 2020 is the major concern of the FAA, the CAB and the airlines as far as air travel is concerned, but other future-year plans are the concern of other groups in our country. The release of a 27-minute color film, *The Choice Is Ours*, presents the study of the future water and related land needs for the Upper Mississippi River Basin in the years 1980, 2000 and 2020. These years may seem far in the future, but time and a population explosion with an unrelenting increase in the water needs makes this a front rank problem.

The Choice Is Ours presents the recommendations from a six-year study of the Upper Mississippi River Basin Comprehensive Study Coordinating Committee on the conservation of water and related land resources, the pollution problem, flood control and management of flood plain areas, river navigation, preservation of lands for wildlife and water supply.

The study was conducted under the guidance of a committee of engineers, economists, and other specialists from the States of Illinois, Iowa, Minnesota, Missouri, Wisconsin, South Dakota and Indiana, along with representatives from the U.S. Department of Agriculture, Department of the Army, Department of Commerce, Department of Health, Education and Welfare,

Department of the Interior, and Federal Power Commission.

One of the unique features of *The Choice Is Ours* is the 318 separate scenes in the 27-minute film with locations in the north from Lake Itasca, source of the Mississippi, to Cairo, Illinois, the southern boundary of the Upper Mississippi Basin. Within this kaleidoscopic succession of colorful scenes the beauty of the four seasons are included as well as scenic views of lakes, streams, reservoirs and rivers with people enjoy-

At premiere screening, Col. Richard Hesse (left) and Col. W. C. Gelini discuss "The Choice Is Ours" with Reid Ray.

ing fishing, sailing, boating, swimming, and water skiing with little thought of the water resources they are using. Spectacular flood scenes of destruction graphically show the need for flood control planning along with the need for curtailment of soil erosion and the ugly effects of pollution.

The contract for the production of *The Choice Is Ours* was administered by the Department of the Army, Corps of Engineers, St. Paul District, under the direction of Colonel Richard J. Hesse. It was produced by Reid Ray Films, with veteran producer Reid Ray directing the film through five months of production. The script was written by Robert Tree West, photographed by Bernard Schleiter, edited by Robert H. Winter and narrated by Roger Krupp. Assistant directorial duties on many location scenes were handled by Ellsworth Polsfuss.

The story-line of the film presents facts to the audience concluding with the film's title, *The Choice Is Ours*. A final note as the film fades out is that the Committee can only recommend programs to meet future water and related land needs — the decision to initiate the program remains with the citizens of our country.

The film was released in August and is available for group showings from the Department of the Army, St. Paul District Corps of Engineers, Room 1225, U.S. Post Office and Custom House, St. Paul, Minnesota 55101. Or the Rock Island District Corps of Engineers, Clock Tower Building, Rock Island, Illinois 61201. •

Action—Agony—Accolades

JUST AS the National Football League opens another season this month, American Express begins another season of providing the very best of NFL thrills and game action films to adult audiences through its *NFL Action Films*.

These half-hour color films are available immediately after their showing on CBS television stations around the country. Providing only the best of game action, and purposely presenting the unknown, the unseen and the "inside" of the game, the *NFL Action* films approach an art form in some of the spectacular slow motion and frenzied action scenes.

But more than this, the films take the audience into the locker room, into the private lives of players and coaches alike. One of the films, *They Call It Pro Football* won first prize last year at the Cortina Film Festival—the first American sports film to ever do so.

All of the films are painstakingly planned and edited with film footage from as many as 15 cameras at a single game. From microphones wired into shoulder pads during a game, to living room interviews, professional football players explain their game. The audience hears their calls in the huddle, learns their feelings about the game, and sees in-depth studies of various positions.

Individual film studies includes *Search and Destroy* (the linebackers); *Eyeball to Eyeball* (the linemen); *Sunday's Cool Heroes* (the quarterbacks); *The Runners*; *The Receivers* and others.

The series of 28 films does not miss a single facet of the sport which fascinates people everywhere and dominates TV sets on Sunday afternoons from September through January. One film even shows the manufacture of game balls. Another presents the history of the game. And, *They Lead Two Lives* takes you into the private off-season lives of pro players. Where else could one learn that Green Bay Guard Jerry Kramer is a deep sea diver in the off season?

Nor are the rookies forgotten. From their arrival in training camps to their first pro game, three films in the series scrutinize the rookies. Recording their feelings, showing their work, the films exquisitely show the meaning of the word rookie in the NFL.

NFL Action films go beyond what armchair quarterbacks see of a game on a Sunday afternoon. Championship games are presented from angles and spots impossible for a TV camera to record. Close-ups show the pain, sweat and blood of a game-turning play, along with the jubilation or depression that follows its completion.

On the field, giants of men move with

the agility and grace of ballet dancers, attacking opponents with a ferocity perhaps unequalled in any sport. *NFL Action* shows this as well as the same men speaking softly on their sport from their living rooms, their gardens, and, in one case, from a pulpit.

Many-angle, aerial and slow-motion scenes show precisely why a play worked or failed; what caused a ball to be fumbled; and locker room pep talks that motivate teams to feats seemingly beyond their ability. Literally miles of film are compactly edited and scored to present the very best of the subject matter available for a particular half-hour film. Key plays are carefully shown and examined from every conceivable angle, to provide the viewer with the "inside" answers to a play or game.

Regardless of what you want to know about the game, there is a film in the series that takes you inside to show the answers. All of the films in the series are available from Sterling Movies, Inc. •

How Hoffman-LaRoche Audiovisualized

What stirs corporate management to decide that visual media are a necessary communications factor in a total management system? At Hoffmann-La Roche, an eye-opening, time-saving demonstration turned the trick, and brought about a sophisticated total A-V system.

Checking a computer readout on his office TV receiver is Leonard Gumley, audiovisual director. The same readout can be projected on a large screen in the executive conference room simultaneously.

Complete CCTV and videotaping facilities are available in the H-L studio. The versatile studio can be used for a wide variety of productions.

ABOUT THREE YEARS ago, Hoffmann-La Roche Inc., one of the country's largest pharmaceutical firms, was confronted with an annual presentation to management. Seeking a way to cut the length of this presentation and make it palatable Roche called in an outside management consultant team, headed by an audiovisual specialist. The consultant came up with a four hour slide presentation and the anticipated three-day session was cut to a comfortable and meaningful one-day meeting.

The immediate result was that Roche decided to set up an experimental A-V room to explore the feasibility of creating a full time A-V department. Roche had been on the verge of developing such a facility for some time. Its limited visual communications capabilities were adequate to accomplish slide programs for sales presentations training and promotional purposes, but beyond that all work had to be done outside.

Leonard Gumley, who had led the consulting project, was hired by Hoffman-La Roche to develop and operate a complete A-V communications center. Working with Tele-Measurements, Inc., of Clifton, New Jersey, Roche planned for as complete an A-V system as possible. The system provides total audiovisual communications for Roche's sales, promotional, training and educational programs, both in the corporate headquarters and in the field.

Space to house the A-V department was set aside in the new administration building under construction at that time. The installation was finished in the summer of 1968. It features a complete TV studio and control room, videotape recorders, film and slide chains, kinescope machines and an audio studio. The master control room transmits any medium, plus alpha-numeric computer read-outs, to any or all of 28 TV receivers located in offices throughout the building, via CCTV, now in the process of being extended via cable to other buildings in the Roche complex.

In addition to the 28 receivers, the major facilities for the output of information are two multi-media viewing rooms. The executive conference room and a general viewing room in the TV studio feature 16mm film projectors, large screen TV projectors, and DSI random access slide projectors — all designed for rear projection.

One of the unique problems in developing a visual management information system at Roche was the necessity of integrating computer data with standard video material using large screen projection techniques. Like many other major firms, Roche had become increasingly computerized, but the dissemination of the vast amounts of computer output had become cumbersome.

Output terminals for the General Electric #635 computer at Roche were GE Datanet 760 cathode ray tube data terminals. It was learned that GE had explored the compatibility of the Datanet units with standard closed circuit television.

Since Roche was already using the Datanet 760 CRT as terminal devices in the

DARKENED ROOMS are over.

Kodak announces the Ektalite screen.

With the new *Kodak Ektalite* Projection Screen you can turn on the lights, the projector, and your audience at the same time. That's because this new screen design is six times brighter than conventional screens. That's six times brighter! And it's a lot of ways better for you.

You can project visuals any time, anywhere, even outside. You can use it for assembly-line training. Your audiences can take notes with no problems. You don't have to interrupt the flow of presentations or classes by darkening the room. Now you can show your visuals off in their best light.

The *Ektalite* Screen is extra bright because it uses a remarkable new screen material which rejects ambient light. And the

curved construction of the screen eliminates the "hot spot" found in ordinary flat, darkened-room screens. For less than \$66, you can have a 40 by 40-inch *Ektalite* Screen.

See your Kodak Audiovisual dealer for more information or contact one of the offices listed below. We know you'll agree that the *Kodak Ektalite* Projection Screen is a very bright idea.

Price subject to change without notice.

FBL FILM EXPEDITING CORPORATION

Specializing in:

- Super 8mm and regular 8mm printing, treating, and cartridge loading.
- Video tape to film transfers in 2", 1", and 1/2" — in B&W and color.
- Creative editing and matching in 16mm and 35mm.
- 16mm and 35mm printing — B&W and color.
- Mounting of 16mm and 35mm.

Our technical quality control department, including high speed projection equipment and a color time on staff, coordinates all phases of our services to produce the best possible final product. You need no longer worry about any of the complications which can mar or ruin an otherwise fine production.

Let our professional expertise work for you, and give your projects the special attention that they deserve.

Hoffman—LaRoche

continued

computer system, a logical outgrowth of its use was to add standard industrial TV monitors directly to the Datanet CCTV system.

The video display of both computer and standard video information can be projected for large screen viewing in both the executive committee conference display facility and the downstairs viewing room by the large screen TV projectors.

The executive conference display utilizes two such projectors. Computer output from the Datanet terminals is relayed via the CCTV system throughout the Roche building to the projectors. The computer readout is normally projected up to three by four feet on the conference room screen.

Computer readouts are only a part of Roche's total Telebeam program. Under Gumley's direction, the pharmaceutical firm produces a wide variety of informational-education video tapes, kinescopes, slide programs and films for the medical field in addition to its own sales training programs, promotional programs and numerous other applications. All of these, plus off-the-air broadcasts can be brought to the large screen by the TV projectors in dimensions up to 5' by 7'.

Roche, an in-house producer of 8mm film cartridges for the past two years, is currently equipping each of its sales representatives with a Bohn Super 8mm film cartridge projector and much of its TV and film production is distributed via this medium. The bulk of the film lab work and cartridges production is handled by FBL Film Expediting Corp.

The total input facilities of the Roche

studio include three live TV cameras, two video tape recorders, 16mm film chain and 16mm projectors as well as several slide projectors. Roche points out two important factors when discussing the success of the Hoffmann-La Roche A-V communication program.

"First of all, no one should try to put together a system such as ours without first bringing in experienced professional employees to plan and man it." Gumley himself, an ex-network production supervisor brought Michael Fahy to Hoffmann-La Roche from one of the networks.

Fahy, an audiovisual engineer, worked with Gumley and Tele-Measurements, Inc. in the selection and installation of all equipment. "Only a person who has been involved in several aspects of this business can be fully qualified to specify equipment is the feeling expressed by Fahy.

In addition to Fahy, George Ross was brought in from another of the networks to assist in the production of Roche's medical educational and training films, 8mm film cartridges, and video and audio tapes.

The liaison man between the A-V department and the using department at Roche is a most important function. If he has a full and complete understanding of what his department is trying to say and do, he can contribute a great deal to the presentation.

The end result is an extremely sophisticated A-V department and associated audiovisual usage throughout the company. Roche has already won two major awards in the A-V field for recent in-house productions.

Projectors are prepared for presentation in Hoffman-LaRoche secondary viewing room. A similar equipment rack is used in the executive viewing room, providing a variety of projection techniques, remotely operated from control panels designed by Decision Systems, Inc. AV Engineer Ed Johnson and Mike Fahy are shown.

Skeet Shooting Champion Offers Tips to Others

Fred Missildine, recognized as the foremost instructor of shotgun shooting in the country, is featured in two new Winchester Western films entitled *Skeet Well* and *Tips on Trap*. Winner of over 30 national and world skeet and trap championships, Missildine offers personalized instruction with the aid of a unique slow-motion camera mounted on a shotgun. This remarkable filming device permits the viewer to see the proper swing, lead and follow-through necessary to become a skilled shooter.

The two 17-minute color movies illustrate from each station such fundamentals as proper stance and gun position. Missildine, supported by a cast of expert gunners, points out that the

The 16-pound Milliken camera mounted on the butt stock of a trap gun might prove too great a handicap for most shooters, but champion Fred Missildine handles it easily and to the viewers advantage.

most common mistake among skilled trap and skeet shooters is lack of concentration. "Every man, woman and youngster," says Missildine, "has the potential ability to break targets 98, 99 and 100 straight . . . the mark of a champion. It takes concentration."

Produced by Francis Carter Wood Productions, these fast moving pictures offer millions of

shooters an opportunity to come under the tutelage of a master teacher.

Prints of *Skeet Well* and *Tips on Trap*, may be obtained from Modern Talking Picture Service, Inc.

Architects Suggest Changes in Communities

The American Institute of Architects has released three films that take a serious look at the world around us. All are in color. *The Noisy Landscape* examines a land filled by an affluent society with wires, garish signs and visual confusion. It offers suggestions for civic ordinances that can develop a master plan spelling out what can be done to prevent such blight.

Right of Way contends that the highway in the city is a disaster, blighting waterfronts, taking valuable land from the tax rolls and dividing neighborhoods. The answer? Planning for transportation and careful designing by architects, engineers and economists.

The Best We Can Do shows that early villages and towns were designed for community living, but that today our non-communities are monotonous to look at and inefficient to live in. The film suggests amending local ordinances to create incentives for community design. All three films are available from Sterling Movies, Inc.

Boise Cascade Presents "The Significance of You"

The Significance of You is the end result of Boise Cascade Corporation's intent to produce a film of "substance and significance related to the importance of man as an individual, and the free enterprise approach to today's problem and tomorrow's solutions". This unusual corporate film deals with the individuality of man, the human condition, and the character of a unique corporate enterprise.

The producers, deMartin-Marana & Associates, toured the operations of Boise Cascade and talked to and recorded the dialogue of employees at all levels. They felt the vigor of Boise Cascade's operation and reinforced their concept of a free-form film portraying a creative, vigorous, youthful, dynamic company. They felt that current communications require dramatic presentation and tried to mix entertainment with the message. The result is the "now" kind of film which appeals to today's audience.

This 28-minute film is available through Modern Talking Picture Service, Inc.

"Water" Stresses Wise Use Of Natural Resource

Water sets out to create an informed appreciation of the importance of water, and to promote a wiser use and reuse of this most important natural resource. It not only achieves this aim in an academic manner, but satisfies the esthetic need of the viewer as well. Spectacular photography and an exciting, original music score spotlight water in its every form—from the tiniest drop to a roaring waterfall and

This Yosemite Valley cascade is one of many scenic shots in *Water*.

thundering ocean waves.

The film, sponsored by Morton Salt and produced by Cavalcade Productions, ranges far and wide to demonstrate that water is a limited resource, and must be more wisely used and reused. Included are sequences dealing with the hydrologic cycle, water chemistry, pollution, irrigation, industrial and domestic use. A significant portion of the film examines interesting examples of water conservation. This 27 minute, color picture uses animation to make clearly understandable the technical aspects of water chemistry.

Water is available through Modern Talking Picture Service, Inc., Prudential Plaza, Chicago, Illinois.

Artemis Expanding Pepsi's "Urban Focus" Series

Artemis Films, Inc. has announced that they have the go-ahead for the expansion of the *Urban Focus* film series being sponsored by the Pepsi-Cola company.

The series, which was begun two years ago, is a combination of motion pictures and film strips on the subject of the American Urban Environment and is designed for use in social studies classrooms. There are currently three films completed and being distributed nationally to school systems through Modern Learning Aids. A fourth film with its accompanying film strips will be released in September.

The films thus far deal with

picture parade . . .

continued

Urban Studies for classroom grade levels one through eight with the stress put on establishing strong personal orientation on the part of the classroom audience for the characters and situations within the films. The objective being to relate the concerns of the audience more clearly to the subject material and attitudes put forward in the films.

Meat Carving Methods Taught by Martha Logan

Too often even the most experienced homemaker will shine in the preparation of a succulent roast or turkey, only to flunk the final test: carving. Yet the carving of meat and poultry into skillfully-cut portions is an art anyone can master. In *The Art of Carving* home economist, Martha Logan, simplifies carving by grouping meats into categories, according to the carving method used. From selection of the proper knife to where and how to use it, she demonstrates the correct methods for carving steaks, hams, standing rib roast, lamb and poultry.

For more information, write Journal Films, 909 West Diversev Parkway, Chicago, Illinois 60614.

Wilbur's Winning Words Teach Better Writing

An audio-visual program on how to write better business communications, *The Winning Words of Wilbur Poe*, teaches any audience how to write more effective letters, memos and reports. This training program is based on six 35mm color filmstrip chapters, each running about 15 minutes, with the sound tracks available on either 6 records or 6 cassette-type tape cartridges.

"Wilbur" is one of the hardest-working salesmen in the company—but one of the poorest letter writers. "Wilbur" is taught how to write better, more result-getting letters, and how to incorporate in his correspondence the basic selling concepts which will sell an idea, a product or a service.

For more information, write Close/Plenum Productions, Inc., 2020 San Carlos Blvd., Fort Myers, Florida 33931.

Nuclear Energy in Space Probed in AEC Films

The Atomic Energy Commission has made available three films dealing with the applications of nuclear energy in space. These color motion pictures may be borrowed free-of-charge, or purchased.

The Weather Eye is the story of the design, development and fabrication of SNAP-19, a small, long-lived, radioisotope-fueled nuclear generator whose mission is to be the auxiliary power supply to produce electrical power aboard a Nimbus weather satellite 600 nautical miles above the earth. *The Atom and the Man on the Moon* describes SNAP-27, its mission and its role in the Apollo program. On an early Apollo flight, astronauts on the moon will install a small scientific laboratory to conduct lunar surface experiments. After they depart for earth, the laboratory will remain, transmitting its research data to receiving stations on earth.

Nuclear Propulsion in Space compares the heavy conventional chemical rockets of today with the nuclear-powered rockets of

tomorrow. For information on where these films may be obtained, write the United States Atomic Energy Commission, Washington, D.C. 20545.

A.M.A. Film Shows How To Minimize Injuries

A 28-minute, color motion picture showing the role of the team physician in the prevention and treatment of athletic injuries has been released by the Committee on the Medical Aspects of Sports of the American Medical Association. *The Team Physician* aims its message at physicians, coaches, school authorities, parents and the athletes themselves. It includes the five regulations laid down by the American Medical Association and the National Federation of State High School Athletic Associations—regulations which are "concerned with preventing injuries as well as treating them when they occur."

Bud Wilkinson, now on President Nixon's White House staff, and formerly head football coach at the University of Oklahoma and consultant to the President on physical fitness, narrates the film. The film was produced by Calvin Productions and is available from Modern Talking Picture Service, Inc.

Movie Industry Explains Voluntary Rating System

The Movie Experience: A Matter of Choice explains the movie industry's voluntary rating system. The film features the voices of Charlton Heston and Tony Randall who tell why the system was adopted, how ratings are determined, and what the symbols, G, M, R and X mean.

The film uses the Film-Of-Graph technique and live action sequences from current and classic feature films to describe the origin and significance of ratings for today's moviegoers.

This film is available from Association Films, Inc.

"Rye on the Rocks" — A Lesson in Conservation

Ask anybody in a mining town, anywhere, about tailings. Somewhere at the end of every mine there is a dump where tailings—a waste product—pile up and form an eyesore, black, glistening and visible for miles. Just outside of Sudbury, a city in north-

ern Ontario, International Nickel has turned the eyesore into acres of green. A permanent solution: grass and trees and even crops. The science of hydroponics: growing plants without soil, was used to develop a turf that would hold the tailings down; to do it one lifetime what nature does in centuries.

After three years, the experiment was declared a success, and over 500 acres have by now been converted to pasture lands. Trees are planting themselves and birds are returning.

Rye on the Rocks, produced by Westminster Films Ltd., tells this story. It can be obtained from the Audio-Visual Communications Department International Nickel Company, Inc., 67 Wall Street, New York 10005.

Film Provides Help In Dealing With Employees

Anticipating, Preventing and Resolving Employees' Grievance is a sound-slidefilm aimed at supervisors and line managers and offering a modern approach to the problem of handling labor problems. The film dramatizes representative common problems that any supervisor or manager can relate to his own situation. Instead of vague generalities, the presentation demonstrates specific, practical techniques for anticipating and "heading off" grievances, and includes a 7-step procedure for resolving those that do arise.

The film is equally effective for introducing newly appointed supervisors or managers to the behavioral aspects of supervision or for giving "old-timers" a refresher course in the solution of grievance problems. For more information, write Industrial Education Films, 200 Park Avenue, New York, New York 10017.

Videotapes Teach Public Relations

A series of 12 half-hour videotape lectures on professional public relations has been produced jointly by the Los Angeles area and San Francisco Peninsula chapters of the Public Relations Society of America. The monochrome programs are based on the book, "Effective Public Relations," by Cutlip and Center.

For more information, write Ampex Tape Exchange, 220 Estes Avenue, Elk Grove Village, Illinois 60007.

Three Speed Stereo Deck Has Crossfield Head

The Model 1600X, 3 speed, self-track, all solid state stereo deck from Tandberg of America, features a crossfield (ias) head to assure better frequency response and signal-to-noise ratio. The 1600X may be used with high output, low noise tube and offers these features: VU meter, automatic tape stop assembly, pushbutton record/stop control, channel selec-

er than 1%. It can be operated by the average television technician and can easily be moved from room to room. For details write TNT Communications, Inc., 62-10 34th Avenue, Woodside, New York 11377.

Movie Camera Animates Computer Output

A movie camera accurate enough to animate computer output to motion picture industry

standards has been developed by Stromberg DatagraphiX. The camera features a special pin-registered movement which eliminates image jitter during a film run. Installed in a DatagraphiX 4020 or 4060 recording system, the camera photographs computer information as it is displayed on a Charactron tube inside the recorder, expanding its capabilities.

Shooting a maximum of ten frames a second, the camera can

This camera will perform tasks essential to professional fields utilizing computer-animated motion pictures.

This tape recorder was designed for variable, quality performance.

tr switch, "joystick" 4-way tape motion lever, 4 digit illuminated revolution counter, instantaneous start-stop control and a tape arster assembly for low wow and jitter.

Further information is available from Tandberg of America, Inc., P.O. Box 171, Pelham, New York.

Television Projector Magnifies Images

The Eidophor television projector, model EP-8, accepts any standard video signal originating from a camera, video tape recorder, broadcast tuner, etc. and projects a clear, bright magnification of the image on front or rear projection screens ranging to theater-size dimensions. It delivers a light output of 4000 lumens which, for a 9' x 12' screen with a gain of 2, results in a highlight brightness of 74.0 foot-lamberts.

The EP-8 also features a contrast ratio of 150:1, a resolution capability of 1000 lines minimum and a picture distortion no great-

The new Norelco FP-16 16mm Projector that...

BRINGS BIG-THEATRE PERFORMANCE to your auditorium. This remarkably rugged projector is engineered to the same high standards demanded by professional motion picture theatres.

PACKS A 2½ HOUR FILM ON ONE REEL. No rewinding or reel changing interrupts the show. Runs forward or reverse. Adapts to automatic operation and remote control.

THROWS A BRIGHTER, CLEARER, STEADIER PICTURE across the largest auditorium. Doesn't require total darkness. Nine different Norelco lenses, including a new zoom lens, available to fit your needs. Uses Xenon or carbon arc light source—or can be purchased with built-in 500 watt ozone-free Xenon lamp house.

BRINGS FILM SOUND INTO PERFECT BALANCE with room acoustics. Optical and magnetic sound.

REMARKABLE VALUE! Send coupon for prices and facts.

continued

pounds. Like all Ampex one-inch videotape units, the VP-4900C operates at a tape speed of 9.6 inches per second, a writing speed of 1,000 in/s and offers one hour of playing time. This unit will be available in September. For more information write Ampex Corporation, 2201 Estes Avenue, Elk Grove Village, Illinois.

Kalart Projector Has Magnetic, Optical Sound

The Kalart/Victor model 82-25 MPR optical/magnetic 16mm motion picture projector features integral magnetic recording and playback capability. The combination magnetic-optical sound drum assembly provides for reproduction of either standard optical sound track or magnetically striped film by simple switching. It incorporates a full-power 25-watt RMS solid state amplifier with matching circuitry for the sound head. Magnetic recording and playback facilities plus mixing capabilities are all in a single,

This Kalart 16mm optical/magnetic motion picture projector features magnetic recording and playback capability combined into a single unit.

completely self contained unit.

A sound level meter provides for visual setting of level controls and separate earphone jack permits monitoring of recording input. The full 25-watt amplifier in conjunction with matching microphone provides for public address system without the need for additional accessories. The model 82-25 also features safety film trips and gentle pressure plate which safeguards film.

More information is available from The Kalart Company, Inc., Plainville, Connecticut 06062.

Fixed Focal Length Lenses Introduced for Bolex 16mm

The Switar 10mm f/1.6 and Macro Switar 26mm f/1.1 lenses for Bolex 16mm cameras are equipped with a preset diaphragm arrangement for more convenient filming. Dual levers on the diaphragm ring are pressed together and rotated for setting the diaphragm opening.

The macro focusing capability of the lenses eliminates the need

The Dynalens provides stabilization for the hand-held or vehicle mounted camera.

The Switar image quality through a combination of 9 lens elements in the 26mm and 10 elements in the 10mm lens holds true even at the extremely large f/1.1 aperture of the standard lens.

write The Camera Mart, Inc 1845 Broadway, New York N.Y. 10023.

Valentino Releases Six Background Albums

Thomas J. Valentino Inc., producers of Major Records, has released six albums to bring its Major Background Production Music Library to over 65 hours of modern music. The diversified material includes electronic music, hard-rock, string compositions, contemporary small group arrangements, descriptive travel sequences individually tailored for specific countries and music selections in the all-important space category.

The Major Background Music and Sound Effects Libraries are available in LPs and quarter inch tape. For more information write Thomas J. Valentino, Inc 150 W. 46th St., New York, N.Y. 10036.

Media III Makes Creative Programming Easy

The portable, multi-media projection system called Media III is designed for one-man presentation of film and sound program in three formats—16mm, film strip and slide. Creative programming can be displayed without complicated installation, excessive expense or professional projectionists.

Two models, Standard and Console, are available and both

The Media III allows even a novice projectionist to present programs in three formats.

for extension tubes for normal close-up work. The Switar 10mm focuses down to about 1" measured from the lens covering an as small as 1½" x 2", the same area covered by the Macro Switar 26mm which focuses down to about 4" from the lens. Both lenses have the Visifocus automatic depth of field scale and a rotating rear ring for positioning the index. For more information write Paillard Incorporated, 1900 Lower Road, Linden, New Jersey 07036.

Stabilization Available For Hand Held Camera

The Dynalens, a product of the Dynasciences Corp., is available from The Camera Mart, Inc. Its function is to provide complete stabilization for pictures shot with hand-held or vehicle mounted 16 & 35mm cameras using zoom or fixed focus lenses. Of special importance is the fact that the Dynalens will provide image stabilization in motor boats and helicopters and will eliminate the coordination previously required between pilot and cinematographer.

Adapt Slide Projectors to Filmstrip Projector

The Ektagraphic Filmstrip
Adapter quickly converts a
Kodak Ektagraphic or Carousel
slide projector into a 35mm single
frame filmstrip projector. The
Adapter handles filmstrips in
rolls or short lengths and can be
substituted for the lens in sec-
onds. The Adapter includes a
coated, easy-to-focus 3-inch

f/2.8 projection lens and a field
lens system for even illumination
and heat absorption.

Guide rails eliminate the need
for glass pressure plates. First and
last frames are projected with no
leader because the sprocket ad-
vance mechanism is in the gate
and film is advanced or reversed
by a knob that automatically
frames each segment. For more
information write Projection Sys-
tems, Inc., 202 East 44th St.,
New York 10017.

LOW COST, READY TO USE BACKGROUND SCENERY AVAILABLE NOW!

Inexpensive, pre-fabricated scenic backgrounds are
now available for motion picture production. No
longer is it necessary to plan on spending large
amounts of time and money constructing sets in the
conventional manner. With our pre-built, completely
realistic scenic units, all components needed for any
set are available in ready to use 4' x 8' panels. All
you have to do is prop them up and start shooting.
For example, that solid oak paneling you see in the
photograph isn't really genuine but you'd never know
it. That set was put together in less than an hour . . .
by one man! We call it "instant scenery" but on cam-
era, the look is completely authentic and just imagine
the potential savings in manpower and budgets.

We have a whole collection of different back-
grounds available, all equally as realistic. English,
Italian, Spanish and French panelings, brick walls,
fieldstone, logs, shingles, roof tiles and barnwood
siding are just a few of the many settings we supply.
Each unit is a *fully dimensioned, precisely detailed*
replica of the real thing hand painted in true to life
colors. If your company needs authentic but inex-
pensive scenery that sets up in a hurry, and is also
easily stored, just check with us. Chances are, we've
already got it made up for you.

These Lekolite Spotlights by Century Lighting offer many fine features.

basic models include 6", 8", 10" and 12" lenses 500/1000 W. units. These spotlights feature heat resistant stepped lenses with opaque risers in optical combination with flatted ellipsoidal specular reflector, rugged corrugated steel body for flow-through cooling, offset yoke to permit full clearance of shutter controls and four-way push shutters or iris of heat resisting alloys designed for accurate beam control. For more information, write Century Lighting, Inc., 3 Entin Road, Clifton, New Jersey 07014.

AC Alternator Provides Power Where You Need It.

The JP 7091G is a portable, light weight power source. Its small size makes it ideal for under-the-hood installation in many types of vehicles or for connection to a power take-off or auxiliary gasoline engine. The JP 7091G is on a rotating field design and is designed to withstand temperatures up to 350° without failing. Windings are air cooled. Excitation is external. Standard pulley supplied is a universal 2 3/8" diameter, double grooved unit which will accommodate a 3/8" V type belt.

The JP 7091G is a compact and light-weight portable A.C. power source.

Control panel, wiring loom, pulley, U mounting bracket and belt tightening arm, control cable and hardware are supplied as standard equipment. For more information, write Jack Pill's Camera Equipment, 1135 N. Highland Avenue, Hollywood, California 90038.

Power Supply Introduced by Victor Duncan

The Model 50CC Crystal-Controlled Lightweight Inverter provides 60Hz 120 volt alternating current for running any Auricon camera, the Arriflex BL with sync motor, and the Eclair NPR with sync motor. Although it weighs only 4 pounds, this power

This power supply has more reserve power than its compact size reveals.

supply can run two converted Cine-Voice cameras simultaneously.

This power supply will prove useful in a wide range of field situations where an accurate, lightweight source of crystal-controlled AC is needed, especially for the news or documentary cameraman. For additional information write Victor Duncan, Inc., Dept., N, 11043 Gratiot Avenue, Detroit, Michigan 48213.

VTR Console Provides Safety and Flexibility

The Luxor VTR Console has been designed to facilitate utilization and application of video tape recording systems. It can be securely locked and five-inch ball-bearing swivel casters make it easily mobile. The recorder re-

mains in operating position at all times and the monitors, when not in use can be stored on the lower shelf. In addition to a storage area with an adjustable shelf for the camera, tape reels, cables and other accessories, per-

The Luxor VTR Console is constructed of all-welded, heavy-gauge steel and finished in two-tone charcoal texture.

manent rack-mounting rails for installation of rack-mounted components are also located inside the lower doors.

The console is ventilated to assure proper cooling and the inside of the upper portion is coated with a sound deadening material to help prevent recorder noise from being picked up by the microphone. A hinged power cord access door positioned on the back side of the unit provides easy access to connectors and cables. For more information write Jack C. Coffey Co., Inc., 104 Lake View Ave., Waukegan, Ill. 60085.

TV Control Console for Business and Education

The model TCC-100 series professional television control console is a complete, compact system designed for industrial and educational applications. The package system may be used with any video tape recording system

Designed specifically for the needs of business and education, the Concord's TCC-100 provides capabilities for producing professional, studio quality video tapes.

for professional studio quality recording capabilities. It includes such features as three preview

video monitors, a composite monitor, built-in switching and special effects panel, five audio inputs, built-in speaker for monitoring audio, recording VU meters, operator-to-cameraman communication provisions, a master audio and video control. A brochure is available. Write Concord Communications Systems, 1935 Armacost Avenue, Los Angeles, California 9002

Bell & Howell System Features Portability

Bell & Howell's "Rover" is a portable video camera-recorder combination which weighs only 21 lbs. It operates on either self-contained rechargeable battery pack or normal AC power. Recording time is 20 minutes with a 5" (800') reel of 1/2" video tape. Tapes can be played back on the Bell & Howell model 2966 1/2" video tape recorder.

The "Rover" is extremely portable and operates on battery pack or normal AC power.

The video recorder incorporates solid state circuitry and employs the 2:1 interlace recording system to assure high resolution. Literature is available from Bell & Howell, Video and Audio Products Division, 7235 N. Lincoln Ave., Skokie, Ill. 60076.

Synchronized Sound Available on Super 8 Film

A sound motion picture system which makes possible automatic lip-synchronized sound-on-film, the popular Super 8 size, is the Synchronex Sound Super 8. This system permits the sound track to be incorporated directly on the film, and can be shown on any Super 8 sound projector without the need of special equipment.

The system consists of a camera and a light-weight transistorized tape recorder which is attached to the camera for use. Standard Super 8 film is used. For more information write Rant Corporation, 8220 N. Aurora Ave., Morton Grove, Illinois.

Revealing Facts About Sponsored Films in Theatres

WHAT DO PAYING customers think about sponsored films in motion picture theatres? According to a survey recently conducted by the American Telephone and Telegraph Company, reactions to industrial shorts are positive, and the four Bell System films tested in the survey were acceptable to paying audiences. The survey also indicated that audiences can readily identify AT&T as sponsor.

So, the audience survey was undertaken to determine if paying customers resent industrial messages in commercial theatres, if the public enjoys Bell System films, and if the public can identify the company as a sponsor. The survey of theatre managers was conducted to find out if industrially sponsored films were acceptable, how much commercial message a short can contain before becoming objectionable, and the artistic and creative approaches preferred by managers of industrial shorts.

For the study, each of four Bell System shorts was shown once — once in an urban theatre and once in a suburban house, making a total of eight theatre audience tests. Theatres were located in four geographical areas: East, South, Midwest and West. At each theatre, Film Research surveys distributed response cards to the audience as they left the theatre after seeing a short and a feature movie. Return was 100 per cent of 1,070 cards, approximately 100 per cent.

For the theatre manager portion, telephone interviews were made by Jeanne Gyimes Research from listings of theatres provided by Modern Talking Picture Service, Inc., which distributes films to theatres for many Bell Associated Companies. Results were based on 515 interviews.

Here are some of the details uncovered by the Bell System survey:

• An average of 32 per cent of theatre audiences said they had objection to seeing shorts presented by business or industry.

• 31 per cent said if shorts were interesting or entertaining, they didn't care who sponsored them.

• Only 5 per cent said they

thought business or industry films were out of place in a movie house.

• . . . Almost half of those seeing the shorts were under 25 years old, and only a small per cent were over 65 years old.

• . . . Over nine of ten managers use rental shorts, and over eight of ten use free shorts.

• . . . Most theatre managers favor films in the 5 to 15 minute length. While there is no significant difference in the preferred length of free shorts versus rental shorts, heaviest users of both free and rental shorts book most often those of 5 to 10 minutes length.

• . . . While half of the theatre managers could think of no subject which would be unsuitable for showing, 15 per cent agreed anything too heavy in advertising or commercialism would not be shown.

• . . . Shorts dealing with progress in science and industry, travel and sports and educational subjects are most preferred by managers.

• . . . When asked if they would show shorts treating with urban problems, 27 per cent of theatre managers gave a definite "yes" and 19 per cent gave a "yes" qualified by "probably" or "maybe". Only 17 per cent said "no." . . . 27 per cent of theatre managers said no effort is made to keep shorts in the mood of the feature, and 16 per cent said shorts are booked only for time. On the other hand, only 11 per cent said shorts are kept in the mood of the feature, and only 7 per cent keep shorts in a different mood than the feature.

In a specific response to the survey, 68 per cent of theatre audiences rated the four Bell shorts tested as "excellent" or "good". Only 7 per cent rated the short they saw as "poor." Of those who saw the shorts, 81 per cent could identify AT&T as sponsor.

The four films shown in the survey were *Wire for Sound*, *Good Guys Are Faster*, *Memento* and *Incredible Machine*. These four films were judged by Information Department people as representative of current films sponsored by AT&T as well as representative of four diverse subjects and communications objectives. •

Specialists in Audio-Visual Systems for Communication Facilities

industry news

Motion Associates Joins Science Management Corp.

Science Management Corporation, international management consulting firm, has agreed in principle to acquire Motion Associates East, Incorporated, and affiliated companies.

All outstanding stock of Motion Associates, which is privately held, would be exchanged for stock of Science Management Corporation, which is believed to be the only publicly held management consulting firm.

Motion Associates, an award-winning producer of television

commercials, "will continue operations under its present management, as a wholly owned subsidiary of Science Management Corporation," according to James H. Duncan, president of the consulting firm.

Headquarters of Motion Associates are in New York. Affiliated companies are Motion Associates West, Inc., in Hollywood, Motion Associates Mid-America, Inc., in Chicago, and MG Associates, Inc., a film contract finance company in New York. It also has production facilities in London and Tokyo.

Medion, Inc. Begins Film Work in San Francisco

Medion, Inc. has begun film production work from its newly opened facilities in San Francisco. The fledgling company is headed by Richard T. Heffron, Herbert F. Decker, and Claude Jarmon.

Heffron, a former partner in Guggenheim Productions has directed some 20 award winning documentaries. Decker was co-producer of the Oscar winning *Robert Kennedy Remembered*. Jarmon, currently is executive director of the San Francisco Film Festival.

Current Medion projects include a USA film on African economic development and a documentary on the Columbia River for Kaiser Aluminum and Chemical Corp.

Paramount Forms New Industrial Film Division

Paramount Pictures Corporation has formed a Special Film Projects Film Division for production of industrial, government, training and documentary films.

Production executive for the new division is Kenneth M. Rosen, former producer-writer at KNXT-TV. Lester M. Goldsmith is vice president and general manager of the division.

Rebco Audio Visual Co. Move Central Offices

Jack and Jim Rebert, co-owners of Rebco Audio Visual Company, have moved into their newly constructed central office and audio visual demonstration center at 675 West Imboden Drive, Decatur, Illinois.

The building has 5000 square feet of space divided into offices, demonstration areas, and warehouses.

The demonstration area is stocked with the latest manual and automatic audiovisual equipment and systems. It is equipped with a large rear screen projec-

Projection room at the new Rebco A-V Company offices in Decatur,

tion room with completely remote controlled projection and audio equipment. There is also on display the newest types of instructional materials, (filmstrips, slides, records, tapes, transparencies, 8mm loops, etc.) The new facility is also completely wired for the demonstration of closed circuit television and television video recording.

NVCA Sets Plans for 1969 "Days of Visuals"

The 16th annual Days of Visuals headed by the National Visual Communications Association has been set for November 16-18 at the Essex House in New York City.

Co-chairmen for the event are Les Waddington, J. C. Pennington, Co.; and Gordon Reynolds, Modern Talking Picture Service, Inc.

Present plans call for a film screening of award winning films to be shown the day prior to the seminar, with awards officially being presented on Monday evening at a banquet.

Quality Presentations Adds Producer Group

Quality Presentations, Inc., New York, a subsidiary of Q-T, Inc., which has been principally an industrial staging house, has expanded its operations by taking on a new producers group composed of Gus Eisenman, Paul Nemiroff and Ed Rasch, each of whom has had a long experience in all facets of business communications field.

Panorama Film Productions Formed In California

Standard Radio and Television has formed Panorama Film Productions at KNTV-Channel 11, 645 Park Avenue, San Jose, California, with Don Dulmage as general manager.

Panorama will offer complete motion picture film production services.

Hurlock-Cine World Opens in New York

Hurlock Cine-World, Inc., a new independent non-theatrical distribution organization, began operations this week from New York City with a library of 561 feature films, comprising the entire catalog of motion pictures produced or distributed by Allied Artists Pictures Corporation.

Under a long-term exclusive license, Hurlock Cine-World is to handle worldwide non-theatrical distribution of all future Allied Artists pictures, in addition to the current catalog.

The new organization will be headed by Roger W. Hurlock, former president of Allied Artists, who resigned that post last week to launch the new company, and who will be President of Cine-World.

Hurlock Cine-World will be located at 230 W. 41st Street in New York City.

Best of Industry" selections

15 U. S. Films Selected to Compete in 10th International Industrial Film Festival

THE UNITED STATES will submit 15 "best of industry" motion pictures as this country's entries to the 10th International Industrial Film Festival being held November 11-15 in the imposing Congress Hall of West Berlin. This worldwide competition is sponsored by the Confederation of European Industrial Federations (CEIF). Industrial films of every Western European country compete for honors accorded by a representative international jury. In addition, past festivals have drawn entries from Australia, Canada, Israel, South Africa as well as the U. S. Selections must be submitted through the industrial federations of each competing nation. Traditionally, U.S. selections have been made by a special CINE-oriented committee serving the National Association of Manufacturers, America's host group.

Here are the 15 films chosen to represent the United States in West Berlin this fall:

CATEGORY A

(Films about industrial questions (economic, social, technical or scientific) of general interest and intended for showing primarily to the general public)

Operation, 7½ min. color, 16mm. Sponsor: Springs Mills, Inc. **Producer:** Concepts Unlimited, Inc. **Distributor:** Lester A. Schoenfeld Associates.

Gathering of One, 20 min. color, 16 and 35mm. Sponsor: IBM World Trade Corp. **Producer:** Henry Strauss Productions. **Distributor:** IBM World Trade Corp.

Remember the Day . . . in Pictures, 23 min. color, 16 & 35mm. Sponsor and Producer: Eastman Kodak Company.

CATEGORY B

(Films about specific industrial "realizations", products or materials, intended for general public showings)

North, 67 West, 27½ min. color, 16 & 35mm. Producer: Flickers, Inc. **Distributor:** Association of Industrial Films, Inc.

Accidents Spent, 3 min. color, 16mm. Producer: Gerald McDermott Films, Inc. **Distributor:** Edmark Educational Media, Inc.

The Royal Silk of Thailand, 13½ min. color, 16mm. Sponsor: Thai Airways International. **Producer & Distributor:** McDonnell Douglas Corp.

CATEGORY C

(Films which have the purpose of contributing to the prestige of the industry concerned or of a firm, intended primarily for the general public)

Astrocolor, 7½ min. color, 16mm. Sponsor: American Airlines (through Consolidated ElectroDynamics). **Producer:** Wilding, Inc.

The Significance of You, 28 min. color, 16mm. Sponsor: Boise-Cascade Corp. **Producer:** de Martin, Marona & Associates. **Distributor:** Modern Talking Picture Service, Inc.

CATEGORY D

(Films about specific industrial subjects, products or materials, primarily for "specialist" audiences.)

Skycrane, 27 min. color. Sponsor & Producer: Sikorsky Aircraft Company.

CATEGORY E

(Films on scientific principles and research with industrial application, intended for specialist audiences, including educational institutions)

The Discoverers, 20 min. color, 16 & 35mm. Sponsor: Union Carbide Corp. **Producer:** Peckham Productions, Inc.

CATEGORY F

(Films for manpower and management training, intended for an industrial audience, rather than the public)

Operator, 14 min. color, 16 & 35mm. Sponsor: American Telephone & Telegraph Co. **Producer:** Nell Cox Films, Inc.

A Place to Grow, 18 min. color, 16 & 35mm. Sponsor: Eastman Kodak Company. **Producer:** Peckham Productions, Inc.

Ounces of Prevention, 16 min. color, 16mm. Sponsor & Producer: Firestone Coated Fabrics Co.

CATEGORY G

(Films on accident prevention, occupational diseases, health, re-education and measures of social security, intended for industrial audiences, not for the public.)

What's It Going to Cost You?, 9 min. color, 16mm. Sponsor: Consumers Power Co. **Producer:** Portafilms. **Distributor:** Portafilms Management Services.

Whatever the condition of your film, Rapid can repair, restore and rejuvenate it.

No matter how scratched, brittle, oil-stained or dirty it is. No matter how badly spliced, Rapid can give it new life.

That goes for color as well as black and white; 8, 16, and 35mm. What's more, after we've revitalized the film we give it a special protective coating that resists future damages.

So why spend a fortune on new prints? Come to Rapid Film Technique and renew your old ones.

Use handy coupon below to send for your FREE Trial Certificate and see for yourself what dramatic effect rejuvenation can have . . . on your films and on your budget.

MAIL COUPON TODAY!

Dartnell Names Ten Lombardi Trophy Winners

Sales and marketing divisions of 10 outstanding companies have received Lombardi Trophy Awards for excellent sales meetings built around the Vince Lombardi motion picture, *Second Effort*, William H. Fetridge, president of The Dartnell Corporation, film producers has announced.

A special award "for excellence in all categories" was given to Mack Trucks, Inc., of Allentown, Pennsylvania. The Mack entry was submitted by C. E. Hallock, manager of marketing promotional services.

Lombardi Trophy winners in Category A (company meeting for up to 50 salesmen) were as follows: Sealed Air Corporation, Fair Lawn, New Jersey; Lukens Steel Company, Coatesville, Pennsylvania.

Winners in Category B (company meeting for more than 50 salesmen) were the following: American Seating Company, Grand Rapids, Michigan. Kroehler Manufacturing Company, Naperville, Illinois. Emerson Television Sales Corporation, Stamford, Connecticut. Gulf Oil

Company — U.S., Los Angeles, California.

Winners in Category C (dealer or distributor meeting) follow: Hussman Refrigeration, Inc., St. Louis, Missouri. The Deltona Corporation, Miami, Florida. Southern Equipment & Tractor Company, Inc., Monroe, Louisiana.

The engraved trophies bear a replica of a football on a kickoff tee. Eighty-two of several hundred companies participating in the *Second Effort* competition received certificates of honorable mention.

The film, *Second Effort* applies to salesmanship the rugged determination displayed by Lombardi and his championship Green Bay Packers until the famous coach transferred his talents to the Washington Redskins. The film has topped all records for a sales motivational movie.

Unique Film Series Trains Bell Management

Many of the Bell System Companies are using a unique series of training films in Management Training Programs currently be-

ing conducted throughout the system. The films, *Operant Management, Parts I, II, III*, and *Communications*, produced by Gotham Film Productions, of New York, demonstrate a new and efficient method of supervision whereby supervisory personnel wait for a desired behavior to occur and, when it does, reinforce it with some form of reward. Reinforcing a desired behavior increases the probability of its happening again — even when the work activity is unsupervised.

The four films were shot in a simulated classroom, using actual supervisory personnel of the New York Telephone Company. The lecturer is the Canadian behavioral scientist and management consultant, Dr. Ralph W. Dent.

The films and related textural materials are designed for use by small groups of students, as a self-testing/self training programmed instruction course. Each of the four films contains a number of built-in Stops and Breaks, at which point the students turn off the rear-screen projector and refer to the related printed materials and test booklet. All textural materials were designed by Ted Taylor of AT&T's Commercial Division.

The film was shot during the actual, uninterrupted sessions given by Dr. Dent. Two cameras were used (one for Dr. Dent and the other covering the students' questions and responses). The editing was quite complex, in order to capture the interplay of question and response, action and reaction. *Operant Management* has a total running time of 90 minutes; *Communications*

runs for 15 minutes.

The series was produced and directed by Susan Wayne, Gotham Film Productions.

Furman Films Expands Office, Studios

Furman Films, San Francisco has acquired expanded facilities in a move from 1153 Kean Street to 300 Broadway. According to William Furman, president of the company, the new location provides a shooting stage, editing and projection rooms, conference room and offices. Ne phone number is 415/781-082

Vapor Corp. Film Part of Winning Ad Presentation

The film *Tomorrow's Speed System—Today!*, produced by Kirschner Studios of Chicago-Glenview, Illinois, was part of the award winning presentation recently submitted by Vapor Corporation in the Annual Gold Spike Award competition.

The film describes the operation of a new electronic speed indication and control system. It shows a digital readout speed indicator in use on a locomotive. It also shows the step by step operation of a speed control that maintains the speed of a 100-car train constant, regardless of the number of cars that are empty or loaded. This control operates from speeds as low as 2/10ths a mile per hour. Actual scenes show loading at a coal mine in Central Illinois and at a taconite mine in Minnesota.

Annual Buyer's Guide to Film/Tape Production Services

*

*

*

*

*

*

What's playing at the movies tonight?

It could be your company's film.

If it's professionally produced, with an appealing subject matter (sports, travel, entertainment, public service or documentary) and no offensive commercial message, there's a good chance it can be booked into top theatres.

Chances are even better when it's merchandised and distributed by Modern's Theatre Division to specific market areas of your choice.

With only one 35mm print of your film we can get you 50,000 viewers in one year. With more prints, say 100 or so, we can get you up to 7,000,000 a year...through our 30 Film Exchanges.

We'd like to give you a professional appraisal of your film's chances, based on more than 30 years of creative film merchandising. Just send us a 16mm or 35mm print (even a script will do). If you're interested, we'll also review it for bookings in educational and community groups, summer resorts, airport theatres and television.

Dick Rogers, Vice-President of our Theatre Division, (or your local Modern account executive) will give it his personal attention if you contact him at Modern Talking Picture Service, Inc., 1212 Avenue of the Americas, New York, N.Y. 10036.

MODERN TALKING PICTURE SERVICE, INC.

Sure, you've got some great sales films. But how do you get your salesmen to show 'em?

With the Technicolor 1000—of course.

Sales films really sell. But who likes to use 'em? No one. Not with all the complicated, heavy equipment you have to cart around. That's why the Technicolor 1000 cartridge-loading Super 8 movie projector makes a big hit with salesmen. It's 19 lbs. light. Just snap in the sound film loop cartridge (with up to 29 minutes of film) push the "go" button and the show is on. No threading, no rewinding. Why don't you look into converting your current sales films to Super 8 sound film loops. It's surprisingly inexpensive. Just contact Technicolor. We'll help you put your films on the road!

ARRIFLEX masters schuss and slalom for spectacular TV ski sequence

We used some unusual shooting techniques to get the most dramatic ski sequence ever seen on TV. The camera was mounted on a special rig that allowed it to follow the skiers as they descended the slope. The rig was designed to be as light as possible and to be able to move in any direction. This allowed us to get the most dramatic shots possible. The camera was also able to zoom in and out, giving us a variety of shot sizes. The result was a spectacular TV ski sequence that has never been seen before.

Production '70 Slated During Late October

"Production '70", a two-day workshop in videotape television production methods will be held in two separate sessions this month in New York.

Participation in this second TV workshop sponsored by Reeves is limited to 100 persons in each of two separate sessions. The first, for educators and industrial users, will be October 22 and 23. The second, for those involved in production of commercials and programs will be October 29 and 30.

Industry leaders from throughout the country will share their production experience with participants, and each session will include a state of the art presentation, lighting demonstrations, and case histories.

Registration and other infor-

mation is available from Director of Workshops, Reeves/Actron, 565 Fifth Ave., New York, N.Y. 10017.

UFA/McGraw-Hill Scholarships Announced

The third annual University Film Association/McGraw-Hill Motion Picture Scholarships were recently announced. The scholarship competition is open to continuing graduate film students in UFA-affiliated university film departments. The scholarships, which are sponsored by the McGraw-Hill Book Company, are intended to recognize and encourage excellence in scholarship and in creative work in the area of film.

First prize of \$1,000 went to Chris Koch of the University of

Iowa, who is working toward his Ph.D. with a specialization in film history and criticism. Second prize of \$500 went to John Bartholomew of Temple University, Philadelphia, who is working for his M.S. degree.

Competitors came from virtually every American university film school. Judges were Dr. Richard MacCann, University of Kansas; Dr. Raymond Fielding, Temple University; Dr. Donald Staple, Ohio State University; and Prof. Frank Paine, Southern Illinois University.

Still Room in NAVA A-V Institute

There is still time for business training and audiovisual directors to enroll in the 6th Annual Audio-Visual Institute for Effective Communications, according to

Howard Turner, chairman of the planning committee. The Institute will be held November 9-11 at Indiana University and jointly sponsored by NAVA and the Audio Visual Center at Indiana University.

Participants learn the effective use of different kinds of projected materials in training; the preparation of low cost visual materials; the use of closed circuit TV and videotape and a number of other vital A-V functions. Ample time during the course is also devoted to "hands on" training with various types of equipment.

A highlight of this year's program will be a presentation by Harold Guzofsky, Audio Visual Consultants, Denver, a leader in the field of A-V systems installation and design.

Though enrollment is limited, *Continued on page*

to 110 persons, there are still a number of vacancies for this year's Institute. For additional information, contact NAVA IU Institute, 3150 Spring St., Fairfax, Va. 22030. Telephone: (703) 273-7200.

"I-R 100" Competition Names Kodak Screen

The Kodak Ektalite Projection Screen has been named one of the 100 most significant new technical products of the year by Industrial Research, Inc. The 100 products are chosen on the basis of their technical importance, uniqueness and usefulness.

Winning developments are now on display at Chicago's Museum of Science and Industry.

FR Corp. Licensed to Make ME-4 System

Eastman Kodak has licensed the FR Corporation to manufacture the complete ME-4 chemistry system, used for processing

professional cine ektachrome emulsions.

The new FR ME-4 chemical packaging and preparation is especially designed to meet the requirements of the small quantity users who are not equipped to mix and consume large batches.

Spec sheets and price lists are available from the FR Corporation, 951 Brook Ave., Bronx, N.Y. 10451.

Reeves/Actron Sponsors Several TV Workshops

The Reeves/Actron Corporation is sponsoring several one-day workshops in television production. Two will be held October 14 and November 18.

Designed for persons with no television background, the workshops provide intensive studio orientation and production experience. They are being conducted by S. Douglas Gratton, vice president of production at Reeves/Actron.

For additional details, write Richard S. Christian, Reeves/Actron Corp., 565 Fifth Ave., New York, N.Y. 10017.

Modern Joins Offices In Central D.C. Location

The several Washington area offices of Modern Talking Picture Service are now located together in new quarters at 2000 L Street N.W. This space will house the film library, sponsored film sales office and regional offices of its educational division, Modern Learning Aids.

Screening facilities will be available for the convenience of Modern's clients and others.

NBC Documentaries Available to Public

Many NBC documentaries and specials are now available almost immediately after broadcast on a preview/purchase or rental basis. The NBC National Educational Film Library is a cooperative activity involving 12 major university film libraries. The libraries are located at the University of Arizona; University of California at Berkeley; University of

Illinois; University of Iowa; I State University, Ohio; University of Minnesota; University of North Carolina; Northern Illinois University, DeKalb; Oregon State University; Syracuse University; University of Texas and University of Wisconsin.

Each of these libraries have prints of selected NBC specials within four weeks of broadcast. Among the first to be available will be *Who Killed L. Eerie?*, *Down to the Sea in S* and *Mirror of America*.

Windsor Electronics Has New Videofilm Service

Windsor Electronics Systems Corp. is offering a new service for those involved in all types of audiovisual production and distribution.

With Windsor's new Video process, it is possible to take helical scan videotape in half-inch, one-inch, or two-inch mats and make a high quality transfer to 16mm motion picture film. The 16mm film can be used on a 16mm projector or reduced for use in cine 8 and super 8 formats.

"Who's watching the store?"

This famous old question has many answers at Geo. W. Colburn Laboratory. After the answer print, Raymond Czarnik is one of the most important of these answers.

Ray is manager of order control, an operation Colburn considers just as important as all the processing and technical service.

Ray says, "a film is not finished until the release prints are delivered." So he's always watching the store for you at Colburn.

Slip the end of a video tape around the hub of one of our new Plio-Magic reels and it won't slip off. An exclusive Tape-Tac coating keeps the tape in place—perfectly flat, snug and secure—until you unwind it. Without slippage, ripples or wrinkles, or damage, either.

Our high-impact reels resist cracking, bending and breaking. And each reel,

available in 8"x2", 6½"x2", 8"x1" and 6½"x1", comes in its own metal-core shipping carton, so tape can't shift in transit.

With all this going for it, you would think our new Plio-Magic Tape-Tac video tape reel would be expensive.

Think again. It's the *most* economical on the market. Call or write for details.

Videotape Speeds Press Repair, Service Training

REPAIR AND SERVICE of large printing presses is taught more efficiently than ever before with the aid of videotape recording.

The Miehle division of Miehle-Goss-Dexter, Inc. (M-G-D), one of the world's largest manufacturers of printing presses, uses videotape recording to help train hundreds of manufacturing personnel at its Chicago plant and servicemen at nearly a dozen company service centers throughout the U.S. and Canada.

The Chicago-based firm has produced a library of 75 video tapes in the two years it has been using videotape recording in its training program. Video programs cover everything from technical demonstrations on methods of servicing and operating large and small printing presses to general information talks by Miehle officials.

The videotaped lessons effectively cover a subject in half the time it formerly took to present the material using standard audiovisual methods, according to Miehle training director Nick Heinz.

Videotape recorders, used with television cameras, record pictures and sound on magnetic tape for immediate or delayed playback on television screens, in much the same manner as home audio tape recorders record and play sound alone.

Heinz said there are presently four training and two sales conference rooms at the company's Chicago office with television monitors linked by cable to an Ampex VR-7000 closed circuit videotape recorder. A single training program can be viewed simultaneously in all four rooms.

In one recent week, 176 man hours of instruction for the manufacturing department were shown on video tape. Since then the company has acquired an Ampex VR-7500 to further expand the program.

On his cross-country trips, Heinz takes one of the Ampex recorders and one or more close-circuit television cameras. At each stop he rents or borrows television monitors. At each location he can present, to 50 or more employees at a time, a videotaped talk by a company official on quality control, efficiency or safety. He also presents to smaller groups (sometimes only five men) tapes explaining how to service machinery, how to identify problems or how to install a particular part of a press.

His trips often take him to printing plants using new M-G-D presses. With camera and recorder he records pictures of the new equipment on tape for replay later to employees all over the country.

Recordings of equipment in the field are usually made on the VR-7000. At the training office in Chicago, the tapes are edited on the more sophisticated VR-7500 until the recording is in presentable, logical form. A discussion of the visual material can be added to the audio track during taping or editing.

Heinz said employees are enthusiastic about the television presentations. "In a few minutes on tape you can show many aspects of a large machine. By the same token, you can demonstrate and discuss a tiny part that looms larger on the television screen than it would if you held it in your hand."

To videotape an instructional program on the production, repair or service of Miehle presses, a crew sets up recorder (left) and cameras to record the program for immediate or later use.

SOMETHING WONDERFUL HAPPENS TO SLIDES WITH DYNAMIC DISSOLVE

... cut, lap, and variable-speed dissolves; animation, supers, fades, zooms, and a dozen more exciting effects never before available for slide presentations. This new system, designed for Carousel as well as Selectroslide projectors, is so revolutionary you will have to see it to appreciate it. And now you can: Write today for complete information and the name of the Dynamic Dissolve dealer scheduling demonstrations in your area.

By O. H. Coelln

Real "Film Awareness" is Basic Key to Need and Use of Sound Projector

THE SOUND FILM MEDIUM is the message. Constant awareness, through reading of these pages, through the catalogs and guides offered by distributors and producers of today's highly-useful factual motion pictures, and through the entry lists of domestic and overseas film festivals can enrich both educational and recreational programs of companies, trade groups and institutions.

Awareness of available free-loan and rentable (or purchased) factual films creates the need for projection equipment, screens and lamps: it is the most positive factor creating such demand. Awareness of today's excellent titles, widely available, takes the idle projector off the storeroom shelf and *puts it to work*. Your basic library is incomplete without the updated catalogs of such national film distributors as Association Films, The Jam Handy Organization, Modern Talking Picture Service, Sterling Movies, Inc., and United World Films.

Are you getting the "new release" mailings of such producers as BNA Films, Dartnell Corporation, Roundtable Films, to

name just three primary creative sources of most useful training films?

Alert to scientific progress, are you in contact with the Audio-Visual Branch, National Aeronautics & Space Administration (Washington, D.C. 20546) or the Office of Economic Opportunity, the Atomic Energy Commission? Assuming you're in "Bell System" country, have you asked the Information Department of your local Bell System office to keep you posted on important new films available?

It's always been the basic credo of BUSINESS SCREEN to keep our readers aware of useful, *available* new titles. You can expect that our pages in 1970 will be *even more functional* in this role. For these films are the lifeblood of communications' progress.

Let's be specific, get down to titles of recently outstanding films you must know about. Recent CINE "Golden Eagle" winners for 1969 include the following NASA titles: *America in Space: the First Decade*; *Apollo Mission Highlights*, and *Bridge to Space*. Ask your Bell System local film library about such titles as *Lasers Unlimited* and *Voices from the Deep*, both created by Jerry Fairbanks Productions.

Industrial research is well presented in

The Discoverers, sponsored and distributed by Union Carbide Corporation; Peckham Productions was the ingenious producer. World trade has no finer current advocate than *A Gathering of One*, produced by Henry Strauss for IBM World Trade Corporation.

The American scene is beautifully portrayed in such "Golden Reel" winners: *The American Trail*, co-sponsored by the U.S. Department of the Interior and Humble Oil. This Larry Madison production upholds a great talent in picturing the outdoor scene. It's widely available from Modern Talking Picture Service libraries.

And Modern also offers such a recreation: United Air Lines' fare as *Honolulu* the long-titled *Once Upon a Time a Beautiful Young Damsel Flew to New York Town on Silver Wings* (produced by MPO).

Association Films' long list of free-loan titles contains the CINE winner, *41 North 67 West*, on North Atlantic commercial fishing.

We're sure you know that a whole series of National (Professional) Football League films, sponsored by American Express, is available from libraries of Sterling Movie

Announcing the other half of your slide projector.

The half you hear.

The half that lifts any slide presentation out of the ho-hum class. With music. Sound effects. With carefully chosen, fluff-free words.

Our new Sound-O-Matic* I programmer-recorder works with just about any standard automatic remotely controlled slide projector to give you up to 60 minutes' worth of synchronized sound. It lets you prepare your audio-visual slide presentations ahead of time, then sit back and join your audience. Or better yet, watch their reaction to the show.

All you do is record the sound portion and program slide advances on pop-in, pop-out cassettes. Erase, if you want. Change, if you want. Teach, sell, or train more effectively than ever before. (And take it home on weekends, just for fun.)

Send the coupon for details, or ask for a live demonstration that speaks for itself.

*Sound-O-Matic I: Trademark, Elco Corporation

SHURE

SM53

UNIDIRECTIONAL
DYNAMIC
MICROPHONE

one or all of these provable advantages can make this your most effective and reliable microphone!

1. WIDER FRONT WORKING ANGLE

The SM53 allows *greater freedom of performer movement—tonal quality is unaffected by movement throughout the broad effective pickup area. Eliminates "holes" and "hot spots" when using multiple microphones. These valuable attributes stem from a broad, true cardioid frontal pattern at all frequencies, in all planes—freeing the user from the restrictions of overly tight angular sensitivity.*

2. MORE EFFECTIVE REJECTION OF UNWANTED SOUNDS

The SM53 prevents sound coloration due to off-axis reflections or reverberation—and, in addition, unwanted sounds (even air conditioner rumble) are effectively controlled. These properties are achieved through the polar pattern which is singularly uniform with frequency (even at the extreme low end) and is symmetrical about its axis.

3. MECHANICAL NOISE ISOLATION

Built-in effective shock mount significantly reduces the objectionable stand, cable, and handling noises associated with many unidirectional microphones. The SM53 can be used in many applications where conventional units have proved marginal or unusable.

4. EXTRAORDINARY RUGGEDNESS

You can even drop the SM53 directly on its nose without damaging the microphone element—and it will maintain its excellent performance characteristics.

5. SUPERIOR HUM REJECTION

Built-in hum-rejection system reduces magnetic hum susceptibility by as much as 20 db compared to other units! Makes it far more usable in distant pickup applications and in areas with extremely high magnetic fields.

6. LESS SUSCEPTIBILITY TO "POP"

Integral "pop" filter minimizes explosive breath noise without external screening. Works well where other microphones are marginal or unusable.

7. MINIMIZED PROXIMITY EFFECT

Uniform tonal quality is maintained (without objectionable low-end build-up) regardless of whether the microphone is worked close up or from a distance.

8. FIELD SERVICEABILITY

Element (cartridge), connector, front screen, roll-off switch can all be replaced in minutes.

The p.a. system that shows pictures.

Bauer's P6 automatic is a compact 16mm auto-threading sound projector, of course. You can see that.

What you can't see is its remarkable 15-watt transistorized amplifier. But you can hear its effect. Clearly, cleanly, and (with optional 20W speaker) in most large size auditoriums, whether you use films with optical or magnetic tracks. Because this rugged, handsome projector takes either and transforms them into high-fidelity sound.

The P6 automatic also has magnetic recording capability (including sound on sound, so you can add your own comments over music you record on the track); mike, record player and tape recorder inputs; built-in 3W speaker; and separate volume, bass and treble controls.

Of course, this "p.a. system" is also a brilliant projector, with optional 4000' capacity and 2-speed film drive, forward or reverse. Bauer also makes the P6 automatic with a Marc-300' metal-arc lamp that puts out more than *four times* the light of conventional projector lamps. That you must see to believe.

See your dealer or write to: Allied Impex Corp., 168 Glen Cove Rd., Carle Place, L.I., N.Y. 11514. Chicago; Dallas and Glendale, Calif.

continued

Get on the booking list right away!

Know about Eastman Kodak's sponsorship of some of the nation's best factu films? Mort Goldsholl's production for E of *Worth How Many Words* should be every PTA or related community-school action program through the months ahead.

Every title we've named above is available on *free loan* for any sizeable group audience. Cost will be little more than the time to write or phone the source, plus little postage.

For a slightly larger budget, you can buy or rent excellent supervisory relationship management-oriented sound films from BNA Films or Roundtable Films. For sales-training, the major national source has to be Chicago's Dartnell Film Library.

So there's a beginning, if you haven't a ready made one. *Start an active, regularly programmed employee film "showcase" in your plant or office.* Watch these pages months ahead for (a) Reference Shelf listings of the latest film catalogs from every source; and (b) for classified listings of recommended new titles, reviewed by category, from "agriculture" to "X-ray."

You'll not only end up as "film-minded" you'll bring a world of *extra information* more *know-how* and *worthwhile recreation* to both executives and employees. You also increase your company's awareness of what's best in today's films and improve your next film production.

"Challenges of the 70's" Noted by Industrial Audio-Visual Association

Members of the Industrial Audio-Visual Association, all of them real "pros" in the business of communication in their respective companies, are meeting some of the real challenges of the 70's at their fall meeting in Philadelphia next month (October 14-17).

IAVA's program will also take up *pollution of our air and water; the population increase; black/white relations; human inter-relations; and human alienation.*

Credit is due the Eastern Region program committee for bringing to Philadelphia some extremely well-informed authority on these subjects. Dr. Rod Napier will enlighten these A-V executives on "Selective Perception and the Communications Process—Problem Solving." Dr. Donald Otterburg, of the Eagleville Rehabilitation Center will give his views on "Alcoholism at Drug Addiction in Industry." Obie L. McKenzie, experienced recruiter for Bethlehem Steel, will talk on "Recruiting the Black College Graduate."

The meeting is open *only* to IAVA members and prospective members. But the subjects are of universal concern and will be reported in-depth in these pages, with relevant film titles references where they are available.

your lab processor
will operate

SMOOTHER!

with specially designed

TREISE FILM ROLLERS

There's no drag . . . no film abrasion . . . no wear and tear . . . when you use Treise Rollers. Their unique ball-bearing design insures minimum film pull and provides exceptionally smooth processor performance. All rollers are molded entirely of durable plastic. Moreover, the lands in the rollers are angled so that the film "rides" with only the outside edges touching. The film image never comes in contact with the roller and thus never receives the slightest scratch or abrasion! Available in 8/16mm, 16/35mm, and 70mm. Sizes from 2½" O.D. to 7¾" O.D. Shaft diam: ¾", ½", or ⅝". Choice of stainless steel or nylon ball bearings, or plastic bushings.

Treise Accessories put **NEW LIFE** in any processor!

"SOFT TOUCH" ROLLERS

feature special "tires" composed of tiny silicon or rubber knobs that firmly grip the film and smoothly move it along. Ideal for use with unpertorated or multi-perforated film, or for any film on tendency drive processors.

Write for catalog on our complete line
of fine quality processor accessories!

147 stations in 108 markets — that's coverage!

How do you get a new film booked in 108 TV markets in less than 30 days?

Call the man from United World.

There are only about 200 TV markets in the whole country, including a couple of places you've probably never heard of.

Most PR films that do get TV distribution wind up being seen in 50 or so markets. Occasionally as many as 75. And once in a very blue moon, somebody does a great distribution job for a great film and breaks the 100 market-barrier.

It takes an unusually good film to get that kind of acceptance. It also takes a real pro to make that kind of distribution happen. And it usually takes a year or more.

That's why we're so button-popping proud of what we've been able to do for "Our Man In The Middle", a new film about today's police officer produced for the American Bar Association in cooperation with the Chicago Police Department and the Sears-Roebuck Foundation.

The film is excellent. The topic couldn't be more timely. And we did get bookings with every one of the TV stations listed above within the first 30 days.

Whether it's TV, schools, clubs, movie theaters... or a mix of *all* of today's distribution media, if you've got the film, you'll find it really pays to talk with the man from United World.

CREATE THE Right MOOD EVERY TIME with the "MAJOR" PRODUCTION MUSIC LIBRARY

"MAJOR" offers you a full 65 hours of background production music for titles, bridges, background—for scoring, editing, recording and dubbing music for your:

- FEATURE PRODUCTIONS
- DOCUMENTARIES
- TV FILMS
- SLIDE FILMS
- ANIMATION
- INDUSTRIAL FILMS
- SALES PRESENTATIONS
- COMMERCIALS
- EDUCATIONAL

"MAJOR" specializes in sound—you get exceptional technical know-how and beautifully-recorded original music on LP records or 1/4-Inch Tape, or on 16 or 35mm Mag. Tape ready for a mix.

IMPORTANT: "Major" owns its own copyrights on all production music in its library. World rights available to you on a completely sound legal basis. Re-recording rights available on a "per selection" or "unlimited use" flat fee arrangement.

Realist[®]
super light
projectors

Model 2000

take on the tough assignments

...lighted rooms! giant screens! long throws! large rear projections!

New Super Light Projectors by Realist provide all the brilliance you'll ever need for professional slide presentations. And only Realist Super Lights deliver balanced illumination for equal screen brilliance even at extreme viewing angles. Both units have three built-in fans to assure safe projection of any 2 x 2 mounts. Units are completely self-contained, portable, and require no installation. You have the flexibility and dependability of the Kodak Ektagraphic AV300 with full use of all accessories and

attachments. Super Lights have been thoroughly performance proven at installations across the U. S. Immediate availability. Write for complete information and the name of the Realist audio-visual dealer nearest you.

SUPER LIGHT 2000 For continuous duty, maximum brightness (over 2200* lumens) and minimum operator attention. 500 watt Xenon lamp has 2000 hour life expectancy, with constant light output.

Complete with self-contained DC power converter pack. **Under \$1950.**

SUPER LIGHT 1000 Economy model for "short run" operation. 1200 watt, 10 hour tungsten lamp produces over 2000* lumens. No power pack needed. **Under \$700.**

Las Vegas Swings in New United Air Lines Film

The latest in United Air Lines' "swinging cities" films stars Las Vegas in many and varied roles. Las Vegas a symphony orchestra? Yes, complete with formal dress, conductor and grand piano, all making beautiful music on a dry lake bed 60 miles from the city. Las Vegas a gaming and stage show center? Certainly. But also the place for wonderful water sports—fishing, boating and water skiing, and the city with more churches per capita than any other in the country.

The story is tied around a Las Vegas dancer, Suzanne Steward. She shows up against a variety of backgrounds, each introducing a new sequence of film. Standard matte shots were made, using the blue screen technique rather than the sodium vapor process.

United Air Lines' John Grember, manager of motion picture production and the film's executive producer, and Vern Barry of McDonnell Douglas Film and

TV Communications Unit, producer/director, found out quite early about production problems in Las Vegas. Casino scenes take hours of preparation time because security is like that at Fort Knox.

Weather conditions also caused problems with a winter such as the West hasn't seen in years. And the producers were faced with the challenge of getting a full symphony orchestra with instruments, risers and a podium—plus catering service to appease the musicians' appetites—into a dry lake bed 60 miles away.

The film uses no narration but is enhanced by an original musical score which was composed, arranged and conducted by Chicagoan Bob Ragland.

Interior lighting was accomplished with the use of lightweight Quartz Kings which saved the stringing of heavy-duty cables across casino floors and permitted shooting with the least interruption. Except for a few scenes and the matte shots, regular 725 Ektachrome was used. A 35

Go-go girl sequences tie action together in the latest "swinging city" film

This is the Beaulieu R16B "Automatic."

Can you find the battery?

Our cameraman isn't wearing it. He doesn't have to. Because Beaulieu's rechargeable nickel cadmium battery is built right into the camera handgrip. Powerful? The 1000 mA model will shoot eight 200 ft. magazine loads on a single charge. But just as important, you can replace the battery with a fully charged spare in seconds. With the Beaulieu 16mm, there's no need for batteries strapped around your waist or swinging from your shoulder.

Take another look at the R16B "Automatic". That's a 200 ft. daylight-load magazine on top, a sync pulse generator plugged into the side, and an Angenieux 12-120mm zoom lens out front. Now how much would you say the entire outfit weighs? Including the battery.

If you guessed as little as 12 pounds, you guessed too much. It's 10½ pounds! And the price is just a little over \$2,650!

You don't have to give up critically important features, either.

Like rock steady pictures. Like a mirrored shutter, for reflex viewing with no prism between the lens and the film plane.

You also get the finest automatic exposure control system ever built. A Gossen light meter measures the light intensity coming directly through the lens. And it electronically controls a miniaturized motor that instantly rotates the Angenieux's diaphragm ring to the correct aperture setting. No footage is lost due to rapidly changing light conditions.

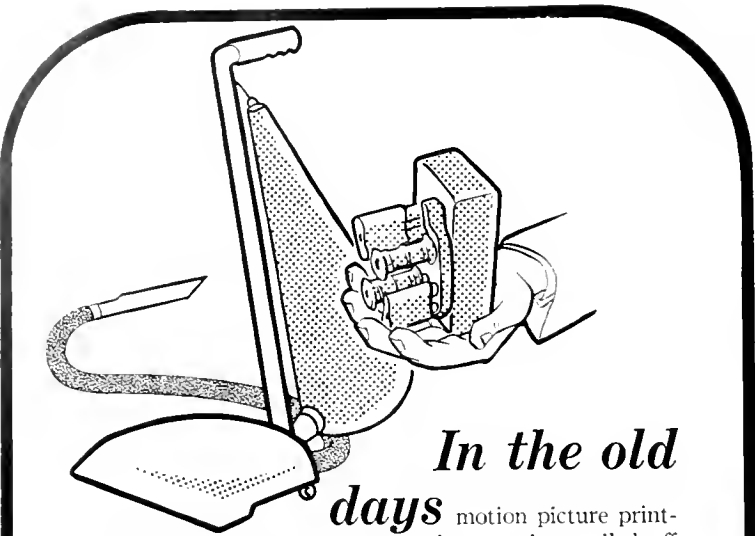

Sync sound is no problem. Your Beaulieu R16B "Automatic" teams up naturally with professional recorders, such as Nagra and Uher, for sync sound filming.

That's pretty good for a little over \$2,650. Particularly since you couldn't get this combination in any other camera even if you spent twice as much.

CINEMA  *Beaulieu*
A DIVISION OF HERVIC CORPORATION

To receive literature on Beaulieu 16mm and Super 8 cameras, or Heurtier projectors, please visit your finest camera store or write Cinema Beaulieu, General Office: 14225 Ventura Boulevard, Sherman Oaks, California 91403 or New York Office: 155 West 68th Street, New York City, New York 10023.

In the old days motion picture printers were equipped with vacuum cleaners that pulled off surface dirt during the printing operation.

Recently, some ingenious engineer invented the Air-Vacuum squeegee to do this. It works on the principle of having slightly more vacuum than air pressure, so that as dust is blown from the film surface, it is whisked away by vacuum before it reaches the printing gate.

These little gadgets don't cost very much, so instead of one for the negative, we also have one for the raw stock.

What does cost money is the special Air-Vacuum pump that supplies laboratory-clean air for the squeegees' proper operation.

How about you—screened any dirty prints lately? Next time you need laboratory services for your color prints, 35, 16 or Super 8mm, give the clean print people a call; we have lots of other little gadgets that work for us and can for you, to make better quality prints.

picture parade...

continued

Mitchell Reflex was used to shoot all blue screen matte shots on the McDonnell Douglas Audio Visual Center stage in Santa Monica. BL and GS Arriflexes were used on all location filming.

Besides the orchestral sequence and the water sports, the film features sailboating on wheels across the same dry lake bed on which the orchestra sat. It captures the beauty of the Valley of Fires, and horseback riding across the desert. It shows gourmet food and 900 competitors racing motorcycles across 185 miles of sand and rock, a dune buggy race across the devil's own terrain, a circus, a wedding and a swinging good time.

Before editing began a high speed style of cutting was decided upon, with use of subliminal cuts in combination with a four or five frame montage style for sequences requiring accelerated movement.

All of the action was tied into a tightly knit visual with the go-go girl sequences and original music.

The result, when picture and sound track were interlocked, was more than had been hoped for. With picture and music only the film told the exciting story

of Las Vegas.

Las Vegas will be distributed by Modern Talking Picture Service, Inc.

"The Trouble With Words Is They're Misunderstood"

"Oh . . . But I thought you said . . ." That's the trouble with words. Misinterpretations, misunderstandings, confusion, mistakes. And the real trouble that the thousands of "little" mistakes that arise through poor communication between employees cost a company enormous sums.

The people at Noran Mines were enough concerned about this problem to ask Westminster Films in Toronto to make a film to deal with the problem.

In *The Trouble With Words* a newly promoted foreman tries to get his ideas across to men who work for him. Gradually we start to see a set of principles that can be applied to dialogue between one who gives orders and one who must act on them. Thus, although this film is set in a factory, its message applies to all levels — from president to office boy.

Additional information may be obtained from Westminster Films Ltd., 259 Gerrard Street East, Toronto 2, Ontario.

Film Explores Expanding Role of Hospital

Beyond the Wall explores the need for hospitals to expand their services to additional areas more convenient to the patient. This 28-minute color motion picture was produced by Camera Productions for the American Hospital Association.

Actual patient-care scenes from hospitals in Philadelphia, St. Louis, Chicago and Houston, Kansas, dramatize the urgent need for expansion of health care services beyond the walls containing the physical plant of the institution. Shown in the films hospital-sponsored clinics operating in urban, suburban and rural areas where health care is minimal. Here residents often counter difficulty getting to

"Spang Makandra" Shot On Location in Surinam

A tangled rain forest, a group of natives and American know-how are the protagonists in a new 16mm movie presented by the Aluminum Company of America. Even the title, *Spang Makandra*, fits right into the ideals of the committed people since it means "working together" and attests to the aspirations and accomplishments of a group of Surinamese workers laboring side by side with Alcoa technicians.

Shot on location in Surinam, South America, an exciting pioneering spirit permeates the film as its people learn new skills, raise their standard of living, and see the creation of new homes, hospitals and schools. This 29-minute color film is being distributed on a free-loan basis by Association Films.

Religion, Medicine Work For Health of Patient

Clergyman-doctor teamwork in the treatment of sick people is the subject of a 28-minute color film, produced for the American Medical Society by Centron Corporation. *A Storm — A Strife* is the story of a family in which the mother conceals her serious illness at the cost of great emotional strain. As her tension builds up the family suffers, until eventually she breaks down and reveals everything to her minister. He is able to discuss the problems with the family doctor and work out a way for the family to cope with it.

The film was produced under the supervision of the A.M.A.'s Department of Medicine and Religion "to demonstrate the deep concern of both professions for the total care of the patient, for serving the whole person and the

whole family."

The film is being distributed by Modern Talking Picture Service.

Hudson's Bay Company Leads Many Faceted Life

Merchants in a Changing Land was produced by Crawley Films to tell the story of the Hudson's Bay Company in the contemporary changing Canadian north. The 28-minute color film captures the breadth of the Company's operations with thought-provoking combinations of scenes from north and south. The camera travels through the Arctic looking out over landscapes that dwarf man and his activities. And this vast panorama of nature is intercut with scenes of the com-

mercial operations behind the development of the north—the computer center where merchandise accounts for distant stores are processed, and the modern offices where buying decisions are made.

Much of the story is told in terms of people—in Montreal, high-stepping, mini-skirted girls move quickly through the hustle and bustle of downtown streets, offices and board rooms; in the Arctic, the Eskimos move toward a new way of life.

The film is being distributed by Modern Talking Picture Service, Inc.

Manufacturer's Story Told on Film

Communicating to new markets is being successfully achieved by Packard Bell Electronics with the introduction of a film, *Going Beyond the Expected*. This eight minute film, produced by Melandrea, Inc., uses a blending of

rapid cuts, visual emphasis and pointed dialogue to reach prospective independent distributor and dealers with impact.

Briefly spanning the gamut of manufacturing from design through engineering and final shipment of product, the film tells what is considered a complicated story in a straightforward, dramatic manner. Prints are being shipped to distributor organizations and will be screened for retailers and trade associations.

Film Series Offers Guide To Food Service Training

A series of twenty-six 8 minute full color and sound motion pictures has been produced for training of restaurant, hotel, institutional and other food service employees. The *Professional Food Preparation and Service Program* was planned with the cooperation of educators and leaders in the food-service field and includes titles on sanitation safety, preparation of foods, serving, care and operation of equipment and human relations.

For a complete educational package, study guides, test booklets and instructor's information sheets accompany each title. Films are available on 16mm or 8mm automatic-loading cartridges and may be purchased, rented or leased from National Educational Media, Inc., 351 W. Cahuenga Blvd., Hollywood, California 90028.

NFPA Teaches Housewife Emergency Fire Measures

Fire in My Kitchen deals with emergency situations which many homemakers face at one time or another. This 12-minute 16mm film in full color and sound demonstrates measures a housewife can safely take to cope with top-of-the-range and oven fires. Action shows first the attempt to smother the fire, the use of an extinguisher if that fails.

Other scenes offer guidance on handling wastebasket fire, overloaded circuits, grease accumulations, and the hazard of clothing fires in and around the kitchen range.

For more information write National Fire Protection Association, Publications Service Department, 60 Battery March St., Boston, Mass. 02110.

ACCLAIMED

More than twice the light of ordinary Carousels.

For auditorium and large screen use. Thousands in use.

The "A.V.E. 1200" features:

- ★ Up to 1200 watt projection lamps.
- ★ Side door lamp access.
- ★ Single external blower.
- ★ Small size, not much larger than standard Carousel.

Price of \$390.00, F.O.B. N.Y., less lens, includes:

- ★ Ektagraphic Model Modified Carousel Projector
- ★ 80-Slide Universal Cartridge
- ★ Remote Control Cable

Special carrying case — \$40.00

Since it helps you get the basic shot easier and quicker, the flexible NPR encourages you to try for the great one.

With some cameras, after you've struggled through the master shot and a couple of closeups, you're exhausted, the actors are stale and the morning's gone. The NPR weighs only 20 pounds and it needs no blimp, so it's no trouble to set up. But once you're shooting—that's when the NPR's design helps you get the safe shots fast, so that you can get to the more turned-on shots that really make the picture and your reputation.

Let's go: You can mount the NPR's magazine in five seconds. No threading; no loop to form. The built-in clapper automatically establishes sync as soon as you switch on. No waiting for slates. The viewfinder rotates, the eyepiece swivels. Any angle, either eye. On the groundglass, you can see the micro-

phone *before* it gets into the shot. Whatever lenses you choose to mount on the rotating turret, they're not inside a blimp; so you can get at them fast.

Fast: Now you've got the basic shots. The NPR is ready for more. Get some candid shots—nobody knows when your NPR is running and when it isn't. Completely silent; and unobtrusive too. When it's on your shoulder, it's lower than your head. Shoulder-resting is comfortable, so it's steady too. You need only one hand to shoulder-rest the NPR. The other hand is free to follow focus or stop down.

Spontaneous: If something happens suddenly, switch on and *then* focus. The groundglass image is so bright, you can see the focus pop right in. If you run out of film, the

five-second magazine change saves you. Shoot right on and cover it with a cutaway later. No stopping. No clapstick. No blimp. No AC power. If you want a really high angle, you can climb a tree with the NPR in one hand, like a briefcase. Then shoulder-rest it. Change to a wider angle lens. Hold onto a branch with your free hand. Shoot. Great.

For a free copy of the NPR brochure, just contact Eclair at 7262 Melrose Ave., Los Angeles; (213) 933 7182. Or at 18 West 56th Street, New York City; (212) 247 0350. No obligation.

industry news

Tulchin, Barbre Form Production Affiliation

Tulchin Productions, Ltd., New York, and Barbre Productions, Inc., Denver, have announced formation of a production affiliation which will permit mutual use of personnel and facilities for the creation of filmed television commercials.

Agreement was announced jointly by Hal Tulchin, president of Tulchin Productions, in New York, and John C. Mullins, president of Mullins Broadcasting Co., which owns Barbre, in Denver.

Historic Early Films Restored, Available

The first twenty years of the motion picture industry are represented in the recent delivery of over 52,000 feet of 16mm motion picture film from DeLuxe General Incorporated. The historic material was transferred from the original rolls of bromide paper that had been filed between 1894 and 1914 with the Library of Congress as proof of copyright.

The 100 films used for the project were carefully selected from more than 3,000 films restored by Kemp Niver, president of Renovare Company, from the archival film of the Library of Congress and were made by such companies as Edison, American Mutoscope & Biograph, Lubin, Selig and the Oklahoma Muto-

Accepting delivery of the historic film from Kemp Niver (right) is Carl Hunt (center), president of DeLuxe General Inc. Looking on is Herb Farmer, director of services of the Department of Cinema, University of Southern California.

scene Company in America, as well as British, French, and Scandinavian producers.

The films are being distributed by University Film Distributors, the new computer based distribution effort of the University Film Association.

Housed in the Division of Cinema of the University of Southern California, films produced by a number of different universities are being offered for sale and rental to all interested organizations.

WRS Labs Enters Sound Recording Business

After more than nine months of planning and building, the newest sound recording studio in the country will open its microphones to some of the best-known musical groups throughout the greater Pittsburgh area and the entire country.

The new recording studio at 210 Semple Street in Pittsburgh was engineered and designed by WRS' Chief Sound Engineer, Olaf Kuuskler, one of the out-

standing recording engineers in the business. Under Olaf's direction, the unusual ceiling design of the studio and specially constructed, acoustically-controlled walls were installed by one of the countries leading acoustical engineering companies.

In addition to a new master console, equipment rooms for mixing and dubbing sound tracks for motion pictures are equipped with the latest in both 16 and 35mm Magna Tech sound recording equipment. You name it, and with a flick of a switch Olaf and his staff can mix 16 to 16, 35 to 35, 16 to 35mm sound tracks or combined 16 and 35 component to synchronous 1/4" 16 or 35 magnetic or optical, or to 35 multi-track. In addition mix changes or corrections are easily handled using the reversible/update features.

For scoring of feature films the entire system is interlocked with 35mm theater arc projectors so that clients can view the edited production in wide screen interlock while playing the score.

Watts Training Center Gets Kodak Cameras

Three professional motion picture cameras have been presented to the Watts Training Center in Los Angeles by Eastman Kodak Company.

The Center, a non-profit organization, was organized to prepare young men and women from minority groups for technical and production work in the television, radio, motion picture and recording industries.

The goal of the Center is to offer practical courses that will allow students to learn current techniques and practices and work with modern equipment thus enabling them to qualify for jobs in these industries.

Plans of the Watts Training Center call for establishing a 18-month course to provide instruction in all four industries. Each industrial segment would b

The new Norelco FP-16 16mm Projector that...

BRINGS BIG-THEATRE PERFORMANCE to your auditorium. This remarkably rugged projector is engineered to the same high standards demanded by professional motion picture theatres.

PACKS A 2½ HOUR FILM ON ONE REEL. No rewinding or reel changing interrupts the show. Runs forward or reverse. Adapts to automatic operation and remote control.

THROWS A BRIGHTER, CLEARER, STEADIER PICTURE across the largest auditorium. Doesn't require total darkness. Nine different Norelco lenses, including a new zoom lens, available to fit your needs. Uses Xenon or Carbon arc light source—or can be purchased with built-in 500 watt ozone-free Xenon lamp house.

BRINGS FILM SOUND INTO PERFECT BALANCE with room acoustics. Optical and magnetic sound.

REMARKABLE VALUE! Send coupon for prices and facts.

broken into concentrated practical areas of instruction.

Both a full-time faculty and part-time instructors — all with professional backgrounds in the various industries covered — will be used in the program.

Audiotronics Purchases Setchell-Carlson Inc.

Audiotronics Corporation has agreed to the cash purchase of the Education Television Divi-

sion of Setchell-Carlson, Inc., a wholly-owned subsidiary of Marquette Corporation, St. Paul, Minn.

Henry B. Christian, Jr. will continue as general manager and all manufacturing and engineering will remain in St. Paul under the new ownership.

Edcom Acquires North American Motion Pictures

Edcom Productions, Cleveland, Ohio, has agreed to acquire, for cash and stock, North American Motion Pictures, a motion picture production company based in Erie, Pa.

The acquisition enables Edcom (EDucational and COMmercial) Productions to expand its motion picture categories to include training and commercial motion pictures in the fields of industry and public relations, and television commercials. This is in addition to Edcom's established line of traffic safety and crime prevention films. The acquisition also enables Edcom to produce

films in 35mm as well as 16mm.

Clinton J. Bebell, president of North American Motion Pictures, will head Edcom Productions as executive producer.

H. G. Peters & Co. Opens Wide Videotape Service

Complete color videotape facilities are being installed in the H. G. Peters & Company Inc. studios in Primos, Pa., according to Hugh G. Peters, president.

United Tele-Productions Inc., the company making the installation, will offer a complete range of creative videotape services to advertising agencies, industries

and TV stations and network. Mobile units will be able to provide videotape facilities anywhere in the country.

The affiliation of H. G. Peters & Company Inc. and United Tele-Productions, Inc., according to Peters, will result in one of the most modern and largest motion picture and videotape operations in the country. Herbert Bas, president of United Tele-Productions, and formerly a writer, producer and director for radio and television in Miami, New York and Philadelphia, says that his company's offices will be located at the Peters company's headquarters in Primos.

This is how the new Walter G. O'Connor Co. studios will look when completed in December in Hershey, Pa. The new facility includes a 4,000 sq. ft. sound stage, 50 x 80 ft. floating floor, double suspended ceiling, catwalk, cyclorama and sound proof sound stage. The building will headquarter the company's advertising and motion picture divisions.

“Cheshire Puss,” said Alice,
“would you tell me please, which
way I ought to go from here?”

“That depends a good deal on where you
want to get to,” said the Cat.

“I don’t much care where—” said Alice.

“Then it doesn’t matter which way you
go,” said the Cat.

If you don’t care about the quality of
your filmstrips or color slide duplicates, it
doesn’t matter where you go. Any labora-
tory will do. But, if you care enough to get
the very best, come to Frank Holmes Lab-
oratories. Here you will find an outstand-
ing enthusiasm for perfection in every
department. Letters from customers all
over the world praise the zealous care we
give each job, no matter how large or how
small. Try us on your next job
...and find out for yourself!

Sequence from the Trimedia production for Arpeja. In one sequence, overall shot, close-up and extreme close up are combined to create lasting impression.

Trimedia: Bold New Slide Show

LAST YEAR, The Film Works, San Francisco, was given a unique challenge—prepare a sales film for a client in three days.

They made it. And out of the artistic and speedy *tour de force* came a unique sales device called Trimedia. It utilizes three slide projectors, with an integrated sound track, programmed and housed in an easily portable unit. It can make its compelling sales pitch just by pushing a button.

Trimedia, as a merchandising tool, was born with photographer T. Gordon Emberley's creative effort to develop a more effective way of showing his photographic talents. He figured, and rightly so, that three images projected on a wall in the dark were visually a great deal more exciting than a normal photographic portfolio. Also, he had a great deal of experience in creating complex and expensive multi-media shows and it was impossible to show prospective clients these efforts once the show had been completed.

To say that Trimedia is just another slide show is like saying that the Mona Lisa is just another painting. Prospects who barely have the time to see one of the eight-minute presentations ask to see three and four. The combination of a creative concept, multi-image photography, unusual and appropriate music and precise timing make a presentation that creates a very strong impression, whether selling to customers or selling Trimedia to potential clients.

The Film Works team is composed of producer-directors David Groot and Tom Hall, creative director and photographer T. Gordon Emberley and sales manager Chet Patterson.

Already produced in the Trimedia concept are shows for Philippine Air Lines, Friden Division of Singer, White Stag, Boise Cascade, Transamerica Corporation, Triumph Motors, Alice of California, as well as an underwater special shown recently at the

12th International Film Festival in Santa Monica. The stills from this show won several major photography awards.

"Trimedia is especially effective in getting across a visual story," notes Groot. "In producing the show for Philippine Air Lines, we were asked to develop the feeling that the air line was a truly substantial world-wide operation, not a local carrier. We sent Emberley to shoot locations throughout the Far East, then edited together a visual package without narration—just dynamic music—and the message really gets across."

In just the few months that the Philippine Air Lines presentation has been shown, it has received very favorable comment. Richard Banks, sales promotion manager for Philippine Air Lines is enthusiastic about his Trimedia show. "It is an excellent vehicle for putting emphasis on our equipment and romantic emphasis on the destinations of our air lines services. The fact that the visual technique is very modern, helps us get across the point that we are, in every respect, a major air line. By showing ourselves, in this upbeat manner, we can portray ourselves as an elite, fast-paced carrier, and create good impressions."

The Friden Division of Singer Company came to The Film Works with a unique problem. How to create an effective sales presentation on a product that was so new that working models would be in short supply. Result? A highly entertaining presentation for Justotext 70, a computerized typesetting device made by Friden. The Trimedia presentation was shown in June at the American Newspaper Publishers show in Chicago and the National Printing Equipment Show in Cleveland.

Bruce F. La Centra, director of advertising for Friden, notes several unique approaches to the Trimedia presentation for his company. "This was the first time a new business product was introduced this way.

In our case, we wanted to create an exciting mood for the product, and at the same time tell the story. We all feel Trimedia did exactly this, without words, and in only 6 minutes. We think of the show as a psychological stage-setter for the salesman and his prospects."

Groot sees an exciting and effective way to sell fashion through Trimedia. "The unit is self-contained and easily transportable between cities. An elaborate fashion show can be set up in no time at all, right at the buyer's office. Details can be shown close-up along with overall shots, all in the context of an effective compelling presentation without the problems concerned with arranging for and fitting of models. So effective was the presentation of a recent Trimedia show that a competitor cut the cables on one of our projection units, but the power was quickly restored." Trimedia's role in fashion recently was the subject of an extensive feature in the fashion section of the *San Francisco Chronicle*.

The average Trimedia production involves Emberley shooting 2000-3000 35 mm color slides. From this wide selection, 240 slides are chosen. Sequences are arranged and special effects are created. Script and music are integrated. Once the slides are arranged in trays and the sound track is transferred, the whole package becomes practically automatic and can be set up in less than three minutes. The presentations usually time out between six to eight minutes. The base cost of a Trimedia show is about \$5,000 not including talent, travel expense or original music.

"This may sound expensive at first," notes Groot, "but not when you compare the cost of Trimedia with film, or other multi-media productions. Trimedia isn't everyone's cup of tea, but we've begun to see all kinds of possible uses for this type of visual communications." •

Educational Film Proves to Be Effective Sales Tool

By **RUSSELL WILKS**
Public Relations Mgr.
Syntex Laboratories, Inc.

SYNTAX LABORATORIES helped introduce its own brand of birth-control pills with a medical motion picture which has been highly effective as an indirect sales tool.

Designed to acquaint physicians with new research in the field, the 16mm full-color movie is offered as a service, both for individual and group showings.

The oral contraceptive market has reached \$100 million in the U.S. and the worldwide potential for this approach to family planning is just beginning to be tapped.

For several years, Syntex has supplied, as it does today, the constituent sex hormones for the makers of the three other leading brands of birth-control pills.

Several years ago, in an effort to diversify and enlarge its activity in the field, the company decided to introduce its own brand name product. The pharmaceutical group employed a major sales effort complementing the activities of its sales representatives with literature, samples, and direct mail and journal advertising.

The marketing objective also called for a subtle institutional approach to focus attention to the new product and the company's direct role in medicine. It wanted to put the Syntex name before doctors, who prescribed oral contraceptives by brand, and before their office nurses, whose own experience and opinion are often influential.

The resulting 21-minute film served as an excellent educational and institutional vehicle. The leader introduction and trailer closing noted that the movie was presented as a public service by Syntex.

The content was written to inform both the general practitioner and the specialist in gynecology and obstetrics. The narration discusses the primary actions of the two forms of oral contraceptives: pills made up of ingredients that are taken in combination and those that are taken sequentially.

The Food and Drug Administration recognizes that both types inhibit ovulation.

Other scientific evidence indicates that the combination pills also have additional effects which seem to deter conception.

Because of their chemical makeup, combination pills seem to make the uterus inhospitable to the fertilized egg and the cervical secretion inhospitable to sperm. Sequential pills do not appear to do either of these things.

The film shows the different effects of the two kinds of pills through a series of charts, graphs, and animated visualizations. This is supplemented by the narration and live action scenes of actual laboratory work and microscopic slides.

The intention of the film was to present new and informative research straightforwardly. The objectivity is apparent to audiences; despite the apparent extra advantage of the combination pill, the sequential type is prescribed for one out of five users because of other advantages, such as the extra estrogen which is often needed by older women.

There is, of course, no definitive way to determine the film's impact on sales. But *The Mechanisms of Action of the Oral Contraceptives* had 295 formal showings by June 1968 to a total audience of more than 11,000 physicians and allied health personnel.

Some doctors who have been impressed by the Syntex film are stimulated to inquire about the company's products for their own practice.

To encourage such a reaction and to ensure the highest possible scientific validity for the movie, the narration was done by three international authorities in reproductive physiology: Dr. Edward T. Tyler, associate clinical professor, Department of Medicine and Obstetrics and Gynecology of UCLA School of Medicine; Dr. Martin L. Stone, professor and chairman, Department of Obstetrics & Gynecology, of the New York Medical College; and Dr. Melvin R. Cohen, associate professor, Department

This film made by Syntex to educate and inform doctors and health officials on new research in the field of oral contraceptives, has evolved into an effective sales tool for the company.

of Obstetrics and Gynecology of the Chicago Medical School.

They are shown in office and laboratory presenting the findings of their research. The script was written by the three doctors and then coordinated by Syntex scientists. The actual filming was done by Aegis Productions, Inc. of New York City.

The movie had its first major screening at a clinical meeting on oral contraception held by the American Medical Association at Las Vegas in November 1966. The film later won a citation from the AMA when it was shown to the association's 116th annual meeting in June 1967 at Atlantic City.

Recognition of another kind came with the award of a 1967 Golden Eagle from the Council on International Non-theatrical Events (CINE).

This was Syntex' second Golden Eagle. The first was awarded two years earlier for another 16mm film that combined color animation with black-and-white live action. That movie, Syntex' first, described the research of two University of Utah physicians into inflammations that follow skin injuries.

Like the birth-control film, this also presented new medical information. Also utilizing cinemicrography, the film reported how corticosteroids help relieve inflammation.

Both movie ventures were the result of a still earlier experience the company had in circulating a commercially made film describing how the female reproductive organs can be examined internally without surgery.

While Syntex had not commissioned that film, it received favorable comment from the medical profession for making it available.

This, understandably, was a major influence in shaping the public relations approach when Syntex set out to market its anti-inflammation treatment and, later, its own brand of oral contraceptives.

The basic cost for the motion picture on oral contraception, the more ambitious of the two Syntex films, approximated \$30,000, a figure that included the first 10 prints. Subsequently, 90 more were bought.

The company considers the money well spent in view of the response of the persons who have already seen the film. The size of the audience will, of course, continue to grow, year after year. The first film, for example, is still greatly in demand.

Syntex has 20 sales districts across the nation. The manager of each has at least one print of the oral contraception movie. Requests come in steadily from the program committees of hospitals, county medical associations, nurses' groups and the like.

They are encouraged in three primary ways: Whenever salesmen call on individual doctors or speak to groups of medical practitioners, they distribute brochures which describe the film. The same booklets are set out in Syntex displays at all medical exhibits and conventions. Finally, the home office in Palo Alto sends out additional material in periodic mailings to the profession.

Also, several prints are maintained by Association Films, Inc., of Ridgefield, N.J., a professional film library service. For a nominal charge of only \$2 to \$3 per showing, it lists the title in its catalog, ships the movie to viewers, repairs the film — if necessary — upon its return, and furnishes monthly reports that provide detailed breakdowns on the audiences that have been

served. Sales managers also send in similar reports.

Syntex sales last year rose 20 percent to a record \$67.2 million. Of that amount, 44.4 percent was accounted for by reproductive physiology products. The company feels very strongly that at least some of the credit for this showing must be accorded to its film on oral contraception. •

Discussing audiences for the Syntex film are Russell Swigert, sales promotion manager, and Russell Wilks, Jr., public relations manager.

Medical director for Syntex Labs, Ben S. Taber, M.D., and Melvin R. Cohen, M.D., who appeared in the film visit following a screening.

A sales representative supervises preparations to show the oral contraception film to members of a county medical association.

Plastic theatre in the process of being inflated (left) rises to full size (right). Pillars around the outside house the projectors and sound equipment

Environmental Theatre

When Dayton Hudson, a retailer operating department stores, discount and hard good stores, shopping centers, jewelry and book stores, decided to carry its corporate philosophy to employees, they went all the way in a controlled inflatable "environmental experience."

Entrance to environmental theater is shown at right. Note nubbled foam rubber floor on which audience sits inside the theater.

IT BLOWS UP like a balloon. Some say it blows the mind. Perhaps more importantly it effectively does the job for which it was intended—communicating the Dayton Hudson Corporation's philosophy and policies to its 20,000 employees.

Dayton Hudson's Special Projects Director, Russ Colber, calls it "environmental theater." Somewhat resembling a huge upside-down swimming pool, the inflatable plastic rectangle is 28 feet long, 13 feet wide, and accommodates about 30 employees at a time. They sit on a floor of five-inch thick foam rubber to further intensify "the tactile sensation" while being inundated by sensations of sight (from seven screens), sound (everywhere) and touch.

The theater uses 21 projectors, three for each of the seven rear screens, housed in eight-foot projection pillars arranged around the outside of the environment. The projectors and sound equipment in the pillars are operated by a 22-channel tape programmer. During the 12 minute show, 1,500 slides are flashed on the screens accompanied by an original folk-rock music score. The entire system can be set up or dismantled in about two hours and is currently on a tour of 58 cities in a 1½ ton truck with two technicians.

Describing the inflatable theater, Colber said, "We wanted to plan a communications environment. We designed a contained frame of reference—you get the message because there's nothing else to get. The plastic theater was selected because it was extremely portable, inexpensive, durable and innovative. I think the biggest variable is your control of the frame of reference, and consequently, attention and involvement; it isn't just the plastic, or just the slides, or just the music, they are all components of a controlled presentation . . . but give the impression of being loose and easy-going."

"In the retail business, Dayton is a go-go company, youth oriented in products and personnel. We wanted to get the spirit and philosophy of the company across to people sharply and clearly, but not just in a booklet or brochure. We wanted this to be a memorable experience. We think that's what we've got."

Bruce B. Dayton, company president, opens the show with a greeting on film, followed by a series of one-sentence printed statements supported by a staccato slide presentation including views of store operations, merchandise, customers and sales personnel in action.

DeCosse-Fuller & Associates, Inc. produced the show under the direction of Colber. The musical score was by Dale Menter of Minneapolis, and recorded by "The Blackwood Apology," a Minneapolis folk-rock group.

A kind of walk-in type animated sculpture, the environmental theater is perhaps unmatched in its complete physical and psychological envelopment of the audience.

EVER SIT IN on a Tape-In? Better yet, do you know what a Tape-In is? While the new Random House dictionary fails to define this pop expression, we've come to look at Tape-Ins as "extra sales and increased profits." Currently, Tape-Ins are accounting for a respectable increase for the Mystik Tape, Borden Inc. product line of 123 different pressure sensitive industrial tapes. And that's enough to put a smile on the face of all top management people at Mystik and their distributors.

Here's how a Tape-In moves the merchandise with Mystik sales representatives running the whole show. First, the Mystik field man personally approaches the key man at the distributor level. Using an eye-appealing kit we custom-designed for this approach, our man presents the concept of a Mystik Tape-In and shows him the various elements used to help train his sales force: slides, follow-up booklets, full-line folders, price lists and other supporting material on each of 5 different categories of

tributor officials. At this point we've staged individual Tape-Ins in every state of the Union except Alaska.

Billed in advance as a sales training program, ranging in time from one hour to one-and-a-half hours depending on the tape category, most Tape-Ins actually run an average of three hours and longer. Is this bad? John A. Gavin, Mystik's director of sales and marketing, doesn't think so. As he puts it, "We stop the show at the specific time allotted for the slide portion of the program, living up to our promise. But most of the audience in the first 60 sessions have held our field men over with questions stimulated by the carefully worded soundtrack and demonstration section of the program." Needless to say, Mystik sales personnel are delighted at the opportunity to answer questions. It gives them the chance to increase interest in the specific line being shown.

The success of these Tape-Ins is no accident. The success was literally "engineered into the package" with a number of Mystik

Mystik Tape's "Tape-Ins" were designed as a marketing approach to excite distributors, move merchandise and increase profits. Results show that this unique A-V program has been doing just that.

the Mystik line . . . electrical, special purpose, packaging, masking and protective tapes. The distributor can choose any or all of the individual Tape-Ins that fit his specific market requirements.

Once the distributor executive is sold on the concept, the rest falls in place. Our Mystik man then gets him to agree to provide an audience composed of distributor salesmen for any one of the five separate Tape-Ins, or the complete program. Dates for these shows are then set and arrangements made by the field man. A report is then sent to his regional manager. Thus far, the series has been applauded vigorously, both by the salesmen in attendance and the Dis-

tributor officials. At this point we've staged individual Tape-Ins in every state of the Union except Alaska. Promotion Manager
Mystik Tape, Borden's, Inc.

Guns are dangerous, but not this one, says Mystik Tape during a "Tape-In" as distributors are told the multiple advantages of Mystik's Polymeric film tape for closing cartons.

What makes the
new RCA PM-85
the world's
most-valued
magnetic film
recorder/reproducer?

NO COM

It's just the world's only no-compromise 16/35mm dual.

No wonder this one is worth more. It delivers absolutely identical high-quality results with either film size. And all automatically. You simply pull out one of our unique interchangeable sprocket and head assemblies. Then plug in another. You don't even have to change speed. PM-85 does it for you — with one distribution system. Automatic equalization, too.

In addition, there's RCA's Unilogic Control for remote and automated operations. Standard. At no additional cost. Just like PM-85's positive pad roller action. That's so you never lose a tight loop in either forward or reverse, with either 16 or 35mm. No wonder film lasts longer.

All that makes RCA's new PM-85 the world's most valued magnetic film reproducer. For full details, contact: RCA Film Recording, 2700 W. Olive Ave., Burbank, Calif., or 1133 Avenue of Americas, New York, NY. • RCA Ltd., 1001 Lenoir St., Montreal, Quebec, Canada. • RCA Ltd., Lincoln Way, Windmill Rd., Sunbury-on-Thames, Middlesex, England. • RCA Ltd., 11 Khartoum Rd., North Ryde NSW, Australia.

tape-ins excite, move. . .

continued

fully by the advertising and sales training departments. We all agreed that slides were the only answer to complete flexibility. Next was the decision on how to provide the commentary, live or canned. It was at this point that we felt an obligation to our field salesmen to give them the most help. We chose the Pro-Gramo unit, and used the voice of our own sales training manager, Bill Elliott, a former radio announcer. The cartridge unit even allows recording the slide-advancing pulses to add a professional touch.

Even then we felt we could not rely 100% on visuals and audio, so we threw in some extras. To help create the proper atmosphere for the Tape-Ins, we designed large, colorful posters styled in a contemporary vein. Instructions to our field men call for the posters to be taped-up (with Mystik double-faced tape, of course) in and around the training room. The posters not only help to convey the Tape-In theme, but many Distributor salesmen have asked

for extras to take home to the younger generation.

As another programmed learning extra, we felt it would be helpful to reprint the slides and commentary in take-home training booklets. We designed additional blank pages at the back of each book for notes, doodles and questions. Every trainee took this helpful and informative piece of literature with him after the session. Currently, the booklets cover the five different Mystik Tape-In categories and have been used effectively even while selling electrical tapes, masking tapes, protective tapes, packaging tapes and special purpose tapes in the field.

Each segment carefully stressed the key point that Mystik has the *right tape for the right job*. Woven into the session are the many advantages of a broad line of industrial tapes, examples of prime prospects for each category and tapes that meet government specifications. And before the lights go on, each viewer has also been exposed to a series of slides that illustrates how to

Slide portion of the "Tape-Ins" are presented on Pro-gramo units combined with Kodak Carousel.

Pre-selling distribution management on importance of a "Tape-In" was accomplished in the field with sales staff presenting a preview.

effectively demonstrate specific features of tape. These are done in cartoon form. All viewers are asked to try the physical demonstrations shown right in the meeting room.

At this point we've held enough Tape-Ins to be able to judge the effectiveness of our training program. We've had enough feedback from the field to determine also that the Kodak Carousels and Pro-Gramo units were holding up. Thus far, we have had few equipment failures.

When Mystik comes out with a new product, it will be no problem at all to eliminate obsolete slides, slip in the new, and re-tape our Pro-Gramo cartridge. Within a matter of days our men will be ready to show the very latest in uses for a new Mystik Tape.

For working with Mystik on this program and for smoothing out some Tape-Ins rough spots, we have to thank William H. Eckmann, executive producer of Shoreline Film Productions. His direction of this effective program was done with expertise . . . a Mystik Mark of Quality.

The PORTABLE HOT SPLICER...the only one of its kind...is the only professional splicer with a built-in lifetime carbide scraper blade. With more than 16,000 in daily use, in more than 30 countries, it is the accepted standard wherever professional films are produced. Though constantly improved over the past 20 years, all parts are readily interchangeable! Maier-Hancock Portable Hot Splicers are synonymous with professional film handling.

"It's an automated projector"
"It's a filmstrip projector"
"It's a movie projector"
"IT'S A STILL PROJECTOR"

It's Super Projector!

Is there a super 8 movie projector that can be many things to many people? Well, if there wasn't one before, there is one now. It's the super new *Kodak Ektagraphic MFS-8 Projector*.

Now, on a single reel of super 8 color film, you can combine the still-frame advantages of filmstrips with the motion advantages of movies. And you show the entire program with an automatic remote-controlled, multi-speed projector. The cues on the film stop the projector automatically for still frames. There is even a cassette tape recorder available that lets you add synchronized sound to control the program. Take a typical show. A push on the remote-control start button and the projector operates just like an ordinary

motion picture projector until it senses a cue. Then it stops—for a title frame or whatever—and it holds until the start button is pushed again. Still frames may ask questions of learners, and then motion sequences may show answers. Repeats? The remote reverse control takes it back with a flick of the finger.

Use it to teach. Use it to sell. Use it to inform. Use it however you want, but use it—because this new projector represents an entirely new creative outlet for your talents. Be the first industrial cinematographer on your block to start using the super MFS-8 Projector. See your Kodak Audiovisual Dealer, or contact one of the offices listed below.

To upgrade the effectiveness of communication thru film, the journalists who report on British sponsored films annually honor the sponsor with the most effective distribution program for a motion picture — with the Clifford Wheeler Memorial Award named after the late distribution chief for British information films overseas.

Following the award, the Industrial Film Correspondents Group joins with the British Industrial and Scientific Film Association in hosting a seminar for sponsors, producers and media men to evaluate the award-winning program and runners-up.

At this year's seminar, held in London, Mr. A. A. Guttridge, group public relations officer of the Hawker Siddeley Group, winners of the 1968 Award, discussed the distribution of *The Engineers*.

This is a big budget film designed to dispel the prevailing image that the Hawker Siddeley Group is concerned solely with aviation.

The target audience was the potential customer for any of the Group's products — from light-weight speed boats to the construction of simply-operated power stations for the under-developed countries.

Secondary audiences are the staff in the Group's international marketing and manufacturing operations.

Finally the film is extensively used through sponsored film library distribution channels in the main operating areas — for example 70 prints are in regular use in North America.

Now in its third year of distribution, *The Engineers*, which previously had won the international Inforfilm award as the film with the greatest international distribution potential, costs \$10,000 a year to show to its audiences.

In contrast was the distribution story of *Light on Road Hazards* sponsored by Dorman & Smith, the British distributors of the U.S. Trafilamp, the modern replacement for

road construction oil lamps. To introduce this new product to traffic engineers and highway authorities, a demonstration film was made specifically for showing on the RCA Super 8mm sound loop desk-top projector. Dorman & Smith affirmed that on each occasion the film was used, sales resulted.

Another U.S. product, Galbestos, manufactured by H. H. Robertson (UK) Limited was the subject of a highly effective low-budget film intensively distributed. H. J. Woodford, Robertson's servicing manager, explained that after trying conventional 16mm distribution to show the properties and applications of the product — a steel sheet sandwiched between layers of bituman, asbestos and plastic — he had opted for desk-top 8mm as the ideal demonstration medium.

Production and equipment costs were amortised at 78¢ per screening the first year and there had been some fantastic results.

In Yugoslavia the sales team had failed to get to the top men of a construction company on the product, but to console them for a wasted journey the management allowed them to show the *Galbestos* to the workers during their lunch break. As a result an impressed work-force pressured the management to view the film and the result was a \$480,000 order.

A third American product featured in this British distribution seminar was I.B.M. computers. *Man and Computer — a Perspective* is an educational film. With 102 countries in 100 countries, I.B.M. has a built-in film distribution network. Bob d'Ancona, I.B.M.'s British films officer, reported that 483 prints were in distribution throughout the world — 120 in the United States — at a cost of 12¢ per 'meaningful exposure'.

Another highly effective use of film was reported by Alfred Herbert of Coventry Limited, a machine tool manufacturer. The company saw the possibility of a \$480,000 order to tool up for a major reorganisation in one sector of the British motor industry. They decided that a film was the best way to show their capability.

Within six weeks the film was scripted, shot, edited and shown at the sales conference. At the time of the seminar, contract discussions were taking place.

After the seminar Alec Hughes, Secretary of the Industrial Film Correspondents Group announced the 1969 winner of the Clifford Wheeler Memorial Award — Shell International Petroleum Company for the distribution and use of *Load on Top*.

This film was sponsored by seven major oil companies and distributed on their behalf by Shell. It was made to show tanker owners how to control oil pollution at sea.

The distribution campaign through forty-five companies will be the subject of the next seminar organised by the British journalists

IFPA JOURNAL

INFORMATION FILM PRODUCERS OF AMERICA, INC.

P.O. Box 1470, Hollywood, California 90028

Report from Conference Chairman

Plans for the 1969 IFPA Conference in San Francisco, October 16-18 are almost finalized according to Dick Foster, Conference Chairman. The Northern California Chapter members are organizing one of the most exciting conferences in the history of IFPA, and the first in San Francisco. Final details for the meeting facilities and exhibit area at the Sheraton Palace have been worked out. On Wednesday evening, October 15th and Thursday evening October 16th, the finalists in the 24 categories for the film competition will be shown in three screening rooms. According to Dick Foster, this will allow people to see films in several different categories during the evening by moving from one screening room to another. Programs with scheduled running times and screening room location will be available at the conference registration desk. After a full session on Friday, October 17th, conferees will be taken by Cable Car to Chinatown for a cocktail party and family style Chinese dinner at the Empress of China. Stan Ahlborn, entertainment chairman for the Friday evening affair promises unique and authentic Chinese lion dancers and music. From that point on, IFPA'ers and other guests will be able to sample the various nightlife activities that San Francisco offers . . . Nob Hill, North Beach, Chinatown, Fisherman's wharf.

Ralph Hall, executive director, has put together the finest exhibit area that IFPA has had to date. All the leading names in motion picture equipment will be represented in this trade show starting Thursday morning and closing on Saturday evening.

Not to leave the wives out of the San Francisco scene, Bess Brady, Sacramento, is formulating plans for two days of activities for the ladies. Visits to a beauty salon, complete with hairstyling, facial, fashion show and wine tasting will be offered on Friday. Saturday promises a visit to the Kabuki Theater which will be appearing in San Francisco. All in all, San Francisco in October for the IFPA Conference promises to be an event that all IFPA Members, guests and families should consider a must! Reservations are very tight in San Francisco but Dick Foster has managed to reserve a large block of rooms at the Sheraton Palace Hotel. All planning to attend are urged to get their advance registration cards for rooms returned to the hotel as soon as possible. The Northern California Chapter has

put a lot of work into the Conference throughout the year and deserve a rousing vote of thanks for all their efforts. Remember October 16, 17th and 18th, in San Francisco!

Latest Conference Additions

As we go to press, all information and news would seem to be concerned with IFPA's 1969 Conference and Trade Show. A year of effort will be climaxed with a full three day program of activities and presentations with time scheduled for taking in the very fine exhibits offered.

Bill Blume, conference program chairman has supplied a dynamic effort to the lineup of this year's programming. "The Shape of Things to Come", theme of this year's Conference, is assuming shape and substance. A full schedule of informative and imaginative presentations are on tap for the entire period of the conference.

Opening the program package on Thursday, October 16th, will be the "welcome" by Mayor Joseph Alioto to all attendees, on behalf of the Bay City. Highlighting the first day of sessions will be the keynote address "Markets of Change" delivered by the noted author of "The Dynamics of Change", Don Fabun of Kaiser Industries.

Thursday programming will present Col. Stanford Roberts, Chief A/V Division, HQ, U.S. Army. Also slated for Thursday, Charles Clark of Motorola will present "Motorola EVR", an entirely new approach to AV. Beginning Friday, W. H. McGaw, producer of the Academy Award winning documentary film, *Journey Into Self*, will speak on "Candid Photo Approaches to Human Behavioral Problems".

Saturday however, will be the climax of events. 1969 has been the culmination of an age of discovery and exploration and each "giant step" taken by our first men on the moon, was thoroughly documented audio-visually so that the world was there too. This world will be ours at the Conference, with highly informative and exciting presentations by men prominent in the development of this phase of the program.

Senator George Murphy, guest of honor, will also be guest speaker for the Awards Banquet, Saturday evening. His address — "The Value of Information Films to Government". The gala evening will be climaxed with the presentation of the "CINDY" awards.

WHAT'S THE GREATEST NEED IN SELLING TODAY?

Located in Dallas, Tex., for the past 17 years, the firm offers complete "in-house" services for the producer of 16mm films including daily processing of 16mm Eastman Ektachrome Commercial, Ektachrome EF, Ektachrome MS, and Ektachrome Reversal Print Stock; black-and-white original, reversal and positive; black-and-white and color reversal work prints; duplicating of black-and-white and color films; optical printing on the Acme optical printer; and stage and equipment rental and equipment sales. Completely staffed and fully equipped editing rooms are available, or the rooms may be rented on a daily or weekly basis. A preview theater, interlock screening and supplies. Sound services include sound mixing and recording on single and multiple channels; scoring; library orchestral music blended or edited; sound effects; and music library. The firm's major service is the Triad color duplicating method, with additive scene-to-scene color correction designed especially for color fidelity and saturation. Other services include ultrasonic cleaning, and electro printing with the Westrex Recording System. Price schedules for laboratory and sound service available upon request.

A "First" in the Dallas/Fort Worth area — 16-

mm color internegative/positive service with Triad® scene-to-scene color correction, and the only self contained, single source, 16mm laboratory in the Southwest.

BACKGROUND: Founded in 1911 (as "The YMCA Motion Picture Bureau," a division of the International Committee of the YMCA's), Association Films was the first sponsored film distributor in America. In 1949, the company was incorporated as an independent distribution service.

SERVICES: Promotion and Publicity: Promotes sponsored films through catalogs, special supplements (directed to teachers and program chairmen), advertising in educational and adult journals, individual film brochures, exhibits at conventions, publicity services. **Print Inspection and Maintenance:** prints are electronically cleaned and inspected after each use; repairs are made as needed and replacement prints ordered on sponsor's authority; scratched prints are given Perma-New treatment, as authorized; during the first 36 months of print life Association Films shares in replacement costs due to damages. **Monthly Reports:** sponsors receive detailed performance reports (data processed) which give audience size and composition; film-user evaluations and comments; course of study where film was used; bookings and showings (current, year-to-date, and cumulative); summary of coverage by states; and other data about performance and audiences. **Programming Services:** confirmation and advance booking notices are sent to users and sponsors on a daily basis; bookers assist organizations in arranging programs and special distribution concepts (Movie-A-Week, on campus, Travelcinema Films for Freedom, etc.) **Library Service Plan:** a professional "physical handling" service for sponsored film libraries that provides all regular services except promotion, as desired) and includes Sponsor Imprinted forms.

ASSOCIATION TELEFILMS: This division is responsible for the distribution of sponsored films to commercial and educational TV stations. It maintains daily contact with TV programmers, creates sponsored-film series and special concepts, prepares TV promotion kits, publicizes sponsored films in "TV Guide" and local newspapers and distributes newsclips and scripts to TV news departments. Current AF-AV series include: *Kyle Rot's World*, *Discovering America*, *Films for Freedom*, *Your Neighbor - The World*, *Theatre 30*, *Achievement*, *World in Focus* and *This Aerospace Age*, all comprised of sponsored films.

THEATRICAL DISTRIBUTION: Places sponsored films in motion picture theatres. Monthly re-

ports, comment cards and advance booking notices are provided; promotion is sent to theatres; publicity stories are sent to theatrical trade magazines.

ASSOCIATION INSTRUCTIONAL MATERIALS: This division of Association Films handles the sales, long-term leasing and rental of educational, training and special purpose films and filmstrips. Acquisitions include sales, rental rights to more than 150 episodes from the award-winning series, *The Twentieth Century; Fair Adventure*, a lecture series on Shakespeare featuring Dr. Frank Baxter, *CBS Reports*; and *The Ryan Athletic Instructional Series*, sports training films produced by Dr. Frank Ryan offered to schools through local bank sponsorship or by direct purchase.

ASSOCIATION MATERIALS MAILING SERVICE: a service for mailing, storage and servicing of consumer information and educational materials; processes shipping of booklets, catalogs, premiums and giveaways; records and tapes; fulfillment specialties. MMS has facilities for weighing and metering, packaging, labeling, inventory control and delivery.

BACKGROUND: United World Films was organized in 1946. It is part of the Music Corporation of America, which includes Universal Pictures, Universal City Studios, Inc., De Records, Inc., and MCA-TV, Inc. In 1951 United World Films purchased the Bell Howell Film-O-Sound library which was largest film library operating in the United States. In 1946 United also purchased outright Castle Films, the largest producer and distributor of 8mm and 16mm sound and silent motion pictures.

SERVICES: Since its organization, United World Films has distributed sponsored films for industry. Distribution is conducted for non-theatrical television and theatrical audiences through distribution offices located throughout the United States. United also produces and

...utes classroom teaching films to the nation's schools. It makes available on 16mm film of its own company (Universal) feature theatrical titles along with selected features from Paramount and other producers. Demand for its films comes from clubs, business organizations, colleges, universities, high schools, men's organizations, agricultural groups, etc. These audiences are constantly increasing and United uses this source of fresh new audience contacts for distributing their clients' sponsored films. In the distribution of their clients' 35mm sponsored films, United utilizes the theatrical knowledge, experience and contacts of Universal Pictures, its associate company. By reason of its affinity with MCA, United has added opportunity to be in constant contact with the program departments of television stations throughout the country. These contacts are used by United in arranging showings for its clients' films.

PROMOTION AND PUBLICITY: United not only produces individual advertising and brochures for each of their clients' pictures, but also has available the extra advertising exposure via listings in other film catalogs produced by the company and distributed to 16mm audiences. United maintains booths and exhibits at the important convention and audio-visual demonstration centers throughout the world.

PRINT SERVICES AND MAINTENANCE: Because it is a part of a professional motion picture distribution organization, United maintains the highest standard of inspection. Prints are inspected and cleaned utilizing the latest electronic equipment. Scratched prints are repaired under a special coating process. United also shares in the cost of replacing any prints damaged during the early years of distribution.

FILM USERS EVALUATION REPORTS: Certified audience report forms are supplied to the client on every showing.

MONTHLY REPORTS: The sponsor receives detailed performance reports which supply audience information by type and size. A detailed recapitulation of the cumulative total audience is supplied each month together with information on number of showings, bookings and the like.

TELEVISION DEPARTMENT: This department specializes in the distribution of client sponsored films to commercial and educational TV stations utilizing TV station contacts of MCA.

THEATRICAL FILM DEPARTMENT: Through this department, arrangements are made for quality theatrical distribution dates utilizing the experience and theater contacts of its associate, Universal Pictures. The latter company has had over 50 years experience in theatrical distribution and was the first organized motion picture company in the industry. United also makes arrangements for its sponsored clients through its film editing staff to produce 35mm prints from existing 16mm prints via a special process. These 35mm prints are thereafter exhibited in the nation's theaters. Professional advertising is employed by United in the exploitation of its clients' films in the theatrical distribution.

NON-THEATRICAL DIVISION: Clubs, organizations, colleges, universities, men's and women's groups, high schools, agricultural groups, etc. but some of the audiences supplied to their clients by this division of United. Film showings are arranged, advance booking notices supplied, monthly reports and recapitulations utilizing automatic business machines.

SPONSOR-GENERATED DISTRIBUTION: Where a client wishes to solicit and obtain bookings him-

AT CFI, WE TREAT FILMSTRIPS LIKE MAJOR SURGERY. Any good surgeon demands the best back-up staff he can get and the vast facilities of the modern hospital complex. At CFI, we do for filmstrips what the hospital staff and equipment do for the surgeon. Our labs are staffed by trained technicians backed up by the most precise laboratory equipment. Sensitometric control insures proper color correction and exposure balance; Chemical control gives consistent color balance and density; Accurate color rendition and minimum contrast gain is assured by special lighting equipment. At CFI, our experts take the worry out of the operation. *Delivery problems?* In our business, one week is normal for a complete filmstrip, but on tighter deadlines, we'll work with you to meet your schedule. *Emergency? Like need a special piece of artwork?* Our art department will design and complete original frames with just the right touch. Or we'll photograph your flat art up to 24" x 32" (32 field). *Worried about getting the message across?* We set type on cells for superimposure or give you special handlettering. *3-dimensional packages?* We can shoot them against a colorful background right into your filmstrip. *Different size transparencies?* We shoot directly from 35mm through 8 x 10 with no intermediate reduction step to cause loss of detail or color. And at CFI, no matter how delicate the problem, our unique continuous-loop printing equipment assures you absolutely uniform filmstrip prints from scratch-free negatives. Our experts are ready to solve your problems right now in our labs. *Hopeless case?* Call Lou Livingston at HO 2-0881.

Your filmstrip benefits from the superior facilities and technology that have been developed to meet the high standards of the motion picture industry.

CONSOLIDATED FILM INDUSTRIES

959 SEWARD STREET, HOLLYWOOD, CALIFORNIA 90038 / HO 2-0881 • HO 9-1441

self, United provides the physical handling, inspection, storage and distribution of such films utilizing its professional experience and facilities. Additional services include "custom" promotion and national research can also be obtained under this type distribution.

"CUSTOM" SERVICES: United produces a "custom" service which includes promotional kits supplied (under a special contract service with its client) by United to each film audience. This gives the sponsored client the added public relations effect surrounding each local community film distribution. It is accomplished by United's publicity division and advertising staff which prepares special news releases, film guides, advertising mats and special posters for use by local film exhibiting audience.

NATIONAL RESEARCH FACILITIES: United has engaged a national research organization on a permanent basis for the purpose of conducting a detailed research on questions of importance and interest to its clients. Such things as preferred length of films, content and the like is obtained from audiences throughout the country.

LOW COST, READY TO USE BACKGROUND SCENERY AVAILABLE NOW!

Inexpensive, pre-fabricated scenic backgrounds are now available for motion picture production. No longer is it necessary to plan on spending large amounts of time and money constructing sets in the conventional manner. With our pre-built, completely realistic scenic units, all components needed for any set are available in ready to use 4' x 8' panels. All you have to do is prop them up and start shooting. For example, that solid oak paneling you see in the photograph isn't really genuine but you'd never know it. That set was put together in less than an hour . . . by one man! We call it "instant scenery" but on camera, the look is completely authentic and just imagine the potential savings in manpower and budgets.

We have a whole collection of different backgrounds available, all equally as realistic. English Italian, Spanish and French panelings, brick walls fieldstone, logs, shingles, roof tiles and barnwood siding are just a few of the many settings we supply. Each unit is a *fully dimensioned, precisely detailed* replica of the real thing hand painted in true to life colors. If your company needs authentic but inexpensive scenery that sets up in a hurry, and is also easily stored, just check with us. Chances are, we've already got it made up for you.

Mobile VTR Center for Videotaping on Location

Radiant Corporation's mobile VTR center is a compact self-contained studio on wheels. The single compact unit holds everything needed for convenient videotape recording and playback: VTR, monitor, camera, tripod, lenses, cables, tapes and accessories. Constructed of heavy

This VTR center will hold all equipment and accessories needed for videotape recording and playback.

gauge steel, the unit features a TV monitor shelf at proper viewing level for a seated audience, locked storage drawers, VTR shelf, tripod platform, locking storage cabinet and easy-to-roll casters.

More information is available from Radiant Corporation, Dept. BSC, 8220 N. Austin Ave., Morton Grove, Ill.

Additions Made To Bell & Howell Line

Bell & Howell has added integrated circuit amplifying systems to their line of Filmosound 16mm motion picture projectors. With integrated circuits many separate electronic components are replaced with a single package, resulting in improved reliability, ease of maintenance and equal or better quality and performance.

Also, Bell & Howell has added two models to their line of Specialist overhead projectors.

Each is designed to fill specialized needs, yet is flexible enough for use in standard projection situations. For further information write Bell & Howell Company, Audio-Visual Products Division, Dept. BSC, 7100 McCormick Rd., Chicago, Ill. 60645.

Record, Playback With Single Projector

Kalart/Victor combination 16mm optical/magnetic sound

projector provides both magnetic sound recording and playback capabilities within a compact unit. Sound can be recorded on any magnetically striped 16mm film by operating the projector in the magnetic mode. Mixing capability permits narration, music and sound effects. Play it back, or change as you like, simply by recording over the original.

Also projects the standard optical film. For more information on the Model 82-25 MPR write

for bulletin #2701 to The Kalart Company, Inc., Dept. BSC, Hultenius Street, Plainville, Connecticut 06062.

GAF Projector Has Low-Voltage Lamp

The General Electric Quartz-line tungsten-halogen lamp eliminates the need for a transformer normally required for operation of low-voltage light sources. In addition, the 30-volt, 80-watt lamp produces more than twice as much total light as 120-volt lamps of similar wattage.

The first application of this lamp will be in a dual 8 projector, the GAF Anscovision model 788. The bromine light source provides the heart of the GAF projector and produces "instant white light". It maintains its high light output and color temperature throughout its 25-hour life.

The lamp unit consists of a jelly bean size quartz lamp mounted in a two-inch reflector. Use of the integral reflector simplifies projector design by eliminating the need for condenser lenses between lamp and film. For more information write General Electric Company, Nela Park, Cleveland, Ohio 44112.

Sentinel 16 Combines Sight and Sound

The Sentinel 16 features a combined cartridge concept—up to 250 16mm filmstrip visuals and up to 20 minutes sound in a single slip-in cartridge. Sight and sound are permanently synchro-

The dull black framing of picture and front accentuate the message and color picture on the Sentinel 16.

nized. The Sentinel 16 is a self-contained package for semi-permanent locations. It joins the hand-carried portable Courier 16 and the soon-to-be-available Tutor 16 for large screen projected images to round out the "16" series of units.

For further information contact LaBelle Industries, Inc., Dept. BSC, 510 S. Worthington St., Oconomowoc, Wisconsin 53066.

Super-Vision magnifies the image from any projector to a size up to 10 feet wide. For details write Anton Process Company, Inc., Dept. BSC, Box 183, Woodside, N.Y. 11377.

IVC Offers Color or Monochrome Recording

The IVC-600 series of videotape recorders combines high quality color or monochrome operation with low cost and light weight. Both the IVC-600 monochrome and the IVC-600-C color recorders are available in cased or uncased versions for rack or console mounting. Complete interchangeability of tapes from one unit to another, color or monochrome, is assured.

Both recorders feature positive mechanical controls with compact, easily accessible electronics. The transport is driven

The IVC-600 series of videotape recorders offer one hour of recording time on one-inch tape.

by a single motor, and fixed entry and exit tape guides permit easy threading. All IVC videotape recorders feature ferrite recording heads for longer life. Pulse interval modulation provides high signal-to-noise ratio. More information is available from International Video Corporation, Dept. BSC, 675 Almaden Ave., Sunnyvale, Calif. 94086.

Xenon Slide Projector Offered by Strong

The Mighty Mite slide projection system utilizes a 1600 watt Xenon short arc bulb and projects 3½" x 4" and 2" x 2" slides with excellent color rendition and full detail pictures on a theater

Xenon slide projector provides large, clear pictures even when it is desirable to maintain illumination.

size screen, even when darkening the room is impractical. The Xenon light source permits continuous operation with daylight color quality (5800°K) light.

It comes with manual slide carrier, lamphouse, power transformer and choice of objective lens in the focal lengths of 4½" to 30". More information can be obtained from The Strong Electric Corp., Dept. BSC, 87 City Park Avenue, Toledo, Ohio 43601.

Zoom Spotlight Features Xenon Arc Illumination

The Xenosolar zoom spotlight, which features horizontal xenon arc illumination, is available with two light-outputs—Model 1000S with 13,000 LM and model 2000S with 70,000 LM. Zooming system spot ratio is 7:2.5 and color beam is optional. Designed to operate with 3 modes, the Xenosolar provides

Xenosolar spotlights have superior reflector optics and magnification power and improved luminous efficiency.

flood, spot and maximum spot illumination. Throw distance are 33 ft. to 230 ft. for the 1000S while the 2000S projects from 33 ft. to 328 ft.

More information is available from Radiarc, Inc., Ushio USA Division, 526 North Garfield Ave., Monterey Park, Calif. 91754.

SINCE 1948

Additions Made to Super-8 Camera Series

The Cinema Beaulieu 4008S Super-8 camera is equipped with ultra-large reflex viewing screen with 27X magnification. It permits film speeds ranging from 2f.p.s. through 70f.p.s. for true slow motion effects. It is equipped with an Angenieux f1.9 8-64mm zoom lens with the Beaulieu Servo-Reglomatic automatic diaphragm control. It also permits complete interchangeability of lenses.

The 4008S camera is equipped with a variable mirror shutter, a ground glass for focusing accuracy and a rechargeable 7.2 volt nickel cadmium battery which can power approximately ten Super-8 cartridges at 18f.p.s. Accessories are available to permit the camera to be operated from 12-volt power supplies found on boats, airplanes, etc.

Another addition to the 4008 Super 8 camera series is the 4008ZM, which permits macro power focusing to one millimeter.

The Beaulieu 4008S is the latest addition to the Cinema Beaulieu Super-8 camera series.

from the lens surface plus a variable motorized zoom from 2 through 12 seconds. Further information is available from *Cine-mat Beaulieu, Dept. BSC, 14225 Ventura Boulevard, Sherman Oaks, California 91403.*

Projection Marker Safe on Any Type Surface

The Blaisdell No. 300 projection marker was designed for writing and marking on cellophane, plastic and acetate sheets used in machines to project images on overhead screens. The wood-cased, hexagon shaped marker sharpens like a regular pencil. Bright yellow colored leads hold a taper point without becoming brittle or too soft. Markings are water soluble and can be removed with a damp cloth.

For additional information on kits and a complete line of marking instruments, write *Blaisdell, Inc., Dept. BSC, Huntingdon Valley, Pa.*

Secure Storage Provided for Audio-Video Tapes

A complete line of custom designed storage and service units for tapes and audio-visual supplies is being offered by the Winsted Corporation. This wide selection of units ranges from a small Tape Storette for 7" sound to a custom tailored cabinet

These units are constructed of heavy-duty 18 gauge steel, finished in durable baked enamel.

for 14" instrumentation tape. All units are of modular design for easy installation in minimum space and provide secure storage, easy accessibility and identification.

For complete information write *The Winsted Corporation, Dept. BSC, 422 S. Seventh St., Minneapolis, Minn. 55415.*

Concord Offers Series of Stereo Tape Decks

The Mark series of high fidelity, reel-to-reel tape decks feature hysteresis (high torque) synchronous drive motor, solid state electronics with integrated circuit preamps, three heads—wide-gap record head, narrow-gap 2 micron playback head and erase head, tape and source

monitoring, flip-up head positions marked for easy editing and built-in head cleaner. Also featured are automatic sound-on-sound recording, variable echo control for reverb effects and cue control. Supply and take up ten-

The Mark III is one of a series of high fidelity, reel-to-reel stereo tape decks. The transport mechanism and eliminate tape burble.

All three of the Mark series recorders have three operating speeds— $7\frac{1}{2}$, $3\frac{3}{4}$ and $1\frac{7}{8}$ —and are equipped with inputs for microphone and auxiliary and outputs for line and headphones. Further information may be obtained by writing *Concord Electronics Corp., Dept. BSC, 1935 Armacost Ave., Los Angeles, Calif. 90025.*

Low-Cost Slide Projector Offered by Kodak

The Kodak Ektagraphic slide projector, model B, features a tachistoscopic shutter, jamproof projection and low cost. Forward and reverse slide sequence and focusing are handled by either at-the-projector controls or remote controls. It comes with the 80-slide capacity Kodak Carousel slide tray and can project transparencies in any format in a 2x2-inch mount up to 1/8-inch thick.

The Model B projector also features horizontal and vertical

The Kodak Ektagraphic slide projector, model B, is jamproof.

slide registration, a four-position selector switch for off, fan, and low and high light output, a lamp ejector and the availability of seven lenses—3, 4, 5 and 7-inch f/3.5, 4 and 5-inch f/2.8 and 4 to 6-inch f/3.5 zoom. Coated condenser optics give 10 percent more light output.

For more information write *Eastman Kodak Company, Corporate Information, Dept. BSC, Rochester, N.Y. 14650.*

Caro-Beam Projector Features Brighter Light

The Caro-Beam high light projector is capable of producing 4000 lumens, giving it a light output brighter than a 500 watt Xenon lamp and seven times brighter than the standard 500 watt Carousel. A built-in timer assures adequate cooling of the lamp and optical elements and proper color temperature for slides is always maintained. Slides can be projected for 45

Tandberg's Love Child

"Pilotone"
Model 11-1-P

PORTABLE/SOLID STATE/BATTERY OPERATED/TAPE RECORDER

for Professional Sound/Film Synchronization

At first, it was almost a "labor of love" to meet all the rigorous dictates for Tandberg excellence. Then, after exhaustive development, a fine product was born—the fully transistorized, 9 1/2 lb., Model 11-1-P. To achieve lip "synch", this newest Tandberg instrument records a pilot signal from the camera, and accommodates a Tandberg synchronizer. It features 5 heads, 3 speeds, 7" reel capacity (cover off), electronic tape speed governor, automatic overload limiter, rugged, climatized (+15°F to +115°F) construction, built-in speaker; accepts ten 1.5V D cell batteries or nickel cadmium batteries.

SPECIFICATIONS

Heads: full track — erase, record, playback; neopilot; tachometer for speed control; Frequency Response: $7\frac{1}{2}$ ips — 30-20,000Hz (± 2 db 40-16,000Hz); $3\frac{3}{4}$ ips — 30-13,000Hz (± 2 db 50-9,000Hz); $1\frac{7}{8}$ ips — 30-7,000Hz (± 2 db 60-4,500 Hz). Signal-to-noise Ratio: @ $7\frac{1}{2}$ ips 61db. Wow: $7\frac{1}{2}$ ips better than .1%; $3\frac{3}{4}$ ips better than .15%; $1\frac{7}{8}$ ips better than .35%. Erase & Bias Frequency: 85.5KHz ± 2 KHz; below 5% distortion. Absolute Speed Tolerance: $\pm 0.5\%$; Transistor Complement: 41 transistors, 8 diodes, 2 zener diodes. \$699.00

Optional Accessories:

Synchronizer S350, Carry Bag S29 95 AC Power Supply S44.95

for better, clearer, more natural sound

ALSO AVAILABLE

For on-the-spot, professional type recordings in 1/2 and full track models. 3 heads, 3 speeds, 7" reel capacity. \$449.50

High Speed ITV Lens Features Zoom

A Soligor f/1.5 ITV lens for 16mm C-mount cameras, and featuring a 4X zoom range, from 22.5mm to 90mm, is available from Allied Impex. The lens may be stopped down as far as f/22 where lighting is extra strong or for maximum depth of field. This industrial TV lens, with its extremely high speed, will prove especially useful in sports and news photography, as well as in

The Soligor ITV 16mm lens for use on Vidicon cameras offers 4X zoom and high speed.

special applications, such as surveillance, where natural light conditions may not permit the use of slower lenses.

For information about a complete line of industrial TV lenses write *Allied Impex Corporation, Dept. BSC, 168 Glen Cove Rd., Carle Place, Long Island, New York 11514.*

Control Console Adds Flexibility to Projector

A circuit which permits the Kodak RA950 Random Access Slide Projector to be used as a remotely controlled sequential projector has been designed by Will Szabo Associates. Providing for two side-by-side images the "black box" permits advance, reverse, and focus functions to be controlled by push buttons on the executive control console. When a sequential program is interrupted for random access to any of the 162 slides a memory restores both projectors to their proper sequential position when the program is resumed.

The system was designed for those business information management facilities and training situations which need somewhat more flexibility than is available

from the Ektagraphic and Carousel projectors but are not ready for the most sophisticated touch-tone or computer access projection systems. For details write *Will Szabo Associates Ltd. Dept. BSC, 121 Wellington Avenue, New Rochelle, N.Y. 10801.*

Portable Videocorder Is Easy to Operate

The CV-2600 half-inch video tape recorder weighs only 15 pounds. It is especially adaptable to educational and industrial training applications where portability and economy are primary considerations. A single lever controls all tape movement—record and playback, as well as rewind and fast forward. Automatic gain control does away with all manual recording adjustments and a servo system provides instant picture stabilization.

For information on this or any of Sony's other half-inch or inch recorders, write *Sony Corporation of America, VTR Division, Dept. BSC, 47-47 Vauxhall Dam Street, Long Island City, N.Y. 11101.*

Cassette Recorder/Pulser And Duplicator Offered

DuKane's Recorder/Pulser and Duplicator system has been designed to produce and duplicate tape cassettes incorporating an inaudible 50Hz signal for automatically advancing DuKane's Cassette Sound Filmstrip Projectors. These units can also be used for conventional monaural cassette recording and duplication purposes. The advance signal and the audio are recorded on the same track making it possible to use both sides of the tape cassette, and eliminating the need for rewinding.

The flexible duplicating system

DuKane's Recorder/Pulser and Duplicator system provides high quality sound and inexpensive duplication.

m allows you to add duplicating units in groups of three. You can add up to twelve one-to-one duplicating units to the Recorder/Pulsar. The duplicator units can also record with other types of audio equipment including record players, radios, tape recorders, etc.

For literature, write to *DuKane Corporation, Audio-Visual Division, Dept. BSC, St. Charles, Illinois 60174.*

Bell & Howell Offers 8mm Cartridge System

A versatile cartridge projector system for all 8mm formats will be available to manufacturers. It permits complete automatic loading of cartridge film, use of 50, 100, 200 and 400' cartridges without any adjustments to the projector, indexing a series of 50' cartridges fastened together in a multiple-play configuration, simple loading of film in cartridges, quick conversion of

40' cartridges snap easily into the same position as do 50, 100 or 200' cartridges with no adjustments to the projector.

This cartridge loading projector to accept all size reels of film even if not loaded in cartridges and has many other features.

For further information write to *Bell & Howell Company, Photo Products Group, Dept. BSC, 700 N. McCormick Rd., Chicago, Ill. 60645.*

PAR 64 Fixtures Serve Variety of Applications

Berkey-ColorTran, has a complete line of PAR 64, 1000W "artz" lamps in 3200°K, 3400°K and daylight color temperatures with a range of beam patterns from narrow spot to wide flood. The Maxi-Brute "6"

The Cine Queen II utilizes the PAR 64 lamp.

and the Cine Queen II are fixtures utilizing the PAR 65 for a variety of lighting applications. The Cine Queen II is suitable for motion picture and television location light and also for photo instrumentation and high speed photography. The well ventilated construction allows for continuous duty operation.

The Cine Queen II can be stand mounted or supported by standard grip equipment. Specially designed specular or diffuse intensifiers are available which increase the intensity and efficiency performance of the fixture.

Complete data is available from *Berkey-ColorTran, Inc., Dept. BSC, 1015 Chestnut Street, Burbank, Calif. 91502.*

8mm Editors Added To Honeywell Line

Two film editors have been added to the line of photographic products from Honeywell. The Honeywell-Elmo SE Super Editor with fixed focus will accommodate Super 8 and Single 8 film. The Honeywell-Elmo SE Dual Editor features an adjustable focus and accommodates Regular 8, Single 8 and Super 8 film.

Both editors feature bright viewing screens, high-speed rewind system with a gear ratio of 3 to 1, adjustable framing, still projection, frame by frame viewing, film puncher to mark place to cut and a reel capacity of 400 feet. Both editors have an f/3.5, 14mm lens. Magnification is 19.6 times for Super 8 and Single 8, and 24 times for Cine 8.

For complete information, write *Honeywell Photographic Products, Dept. BSC, 5501 S. Broadway, Littleton, Colorado.*

Tape to Film Productions Key to S & H Sales Seminars

SIXTEEN VIDEOTAPED productions, transferred to film for presentation, have been the features of a series of sales building seminars recently conducted by the Sperry & Hutchinson Company for its 500 salesmen.

The objective of the program was to install in the salesmen a continued sense of pride as respected members of their communities and as important figures in the retailing economy.

Al Jacoby, Creative Services Director of S&H, and in charge of the program for the company, selected MCI Video/Film Productions, of New York, to produce the seminars after interviewing eight other producers. Jack Moss, head of MCI, is, according to Jacoby, "an expert at sales training, writing, thinking, film production, and most important of all, he is a good listener, just what this job needed."

Jacoby and Moss hit the road for a solid month interviewing S&H men throughout the country to find out what made the difference between crack salesmen and duffers. After 130 interviews and sixty solid hours of tape-recorded interviews, they returned to New York armed with a down-to-the-roots approach to the job and a lot of pre-conceived "cubby-hole thinking" swept away.

The video/film productions were designed to be the glue to hold together the sixteen two-to-three-hour sales building seminars. To do the kind of straight films necessary for the job, Jacoby has estimated, would have taken from \$10,000 to \$30,000 each in production costs. But MCI's videotape approach was able to provide very acceptable quality at a fraction of this cost.

While it would have been possible to go videotape all the way, and present the shows on video monitors in the 17 locations where the seminars were presented, it was felt that the wide availability of 16mm projectors throughout S&H offices would make it simple and efficient to transfer all the programs onto film.

Taping was done by MCI on two-inch

MOSS and JACOBY

broadcast quality tape at studios in Indianapolis in a series of continuous "takes". Each was played back immediately and if not all ok, repeated. Live action was combined with slide, motion picture and art background right on the set to give an "on location" effect. Words and objects were superimposed pictures were split and several elements were shown simultaneously. Editing was done immediately, electronically, with the aid of computer. An average of 15 minutes of videotape was completed in each day's shooting session.

The seminar video/films pointed up the role of the salesman as a key man in S&H Green Stamps operations, the importance of the real "pizazz" in the sales talk, how to change "no" to "go", how to organize the day, and how to sell specific locations, such as food stores, gas stations and drug stores.

Al Jacoby is convinced that in this type of situation, with much information to be conveyed, a tight budget, and limited time, video film has proved itself to be "the way to go". Reports from the field indicate that the video film portions of the seminars were a resounding success.

Job Training, Urban Crisis Films

An evaluative guide to films on jobs, training and the ghetto is based on films entered in the first annual Job Film Fair. The subject matter of the films ranges from new social documentaries that provide an understanding of the background of urban crises and of the capabilities and potentials of inner-city residents, to sensitivity training for managers, supervisors, and rank and file employees. The films also deal with career guidance and specific problems of job recruitment and orientation. Others are designed to aid on-the-job training in a variety of specific occupations.

The 48 page booklet is available for \$4.50 plus 50¢ postage and handling charge from the *American Foundation on Automation and Employment*, Dept. BSC, 280 Park Ave., New York, N.Y. 10017.

Guide to Federal Aid

A comprehensive guide to all federal programs being funded today, "Federal Aid for Schools" gives school administrators a step-by-step program for obtaining more of the five billion dollars in federal funds available to public and private schools. Written as a complete handbook for the local school district, the guide corrects an inequity which has existed ever since schools began seeking federal assistance—the fact that larger or wealthier communities who could afford to hire experts to assist them in preparing proposals, obtained a disproportionate share of federal funds.

This over 400-page guide is available only by writing *The Macmillan Company*, Dept. BSC, 866 Third Ave., New York, N.Y. 10022. The price is \$15.00 per copy.

SVE Fall Catalog

A full-color catalog lists over 500 different 35mm filmstrips, slidesets, Picture-Story Study Prints, educational records, 8mm film loops and multi-media kits. Also listed are tape cassettes for nearly 100 SVE sound filmstrips and stimulating Filmstrip Word Games.

For a copy of this resource guide write *Society for Visual Education, Inc.*, Dept. BSC69-18, 1345 Diversey Parkway, Chicago, Ill. 60612.

Elco Programmer-Recorder

A two-page bulletin describing the Sound-O-Matic I programmer-recorder is available from Elco Corporation. This programmer-recorder converts an automatic slide projector into a cassette-loaded, synchronized sound/slide audiovisual system.

For the bulletin which contains complete specifications and instructions for typical operation with an automatic slide projector, write *Elco Corporation, Dept. BSC, Willow Grove, Pennsylvania 19090.*

Training Films Pamphlet

"What Training Films Can Do For You and Your Company" is the title of a free pamphlet from Olympic Film Service. This independent information clearing house publishes objective Profiles on training films from all

sources. These loose-leaf fact sheets state which employ groups will benefit most from the film, what the film is about, and where you can get it for loan rental.

Categories of Profiles include management development, sales and marketing, human relations, communication skills, office practices and training the disadvantaged. For your copy of the pamphlet write *Olympic Film Service, Dept. BSC, 161 West 22nd Street, New York, N.Y. 10011.*

Classified Music Catalog

De Wolfe Music Library has added six hours of new music including contemporary, rock and jazz and electronic sounds to its collection.

A classified catalog is available on request to *De Wolfe Music Library, Dept. BSC, 25 West 45th Street, New York 10036.*

BUSINESS SCREEN MARKETPLACE

HELP WANTED

AUDIO-VISUAL SPECIALIST

Excellent future with Chicago area Business Equipment Manufacturer. Responsibilities would include production coordination, motion picture and still photography, editing, voice and music scoring. Art and writing experience would be considered plus factors. Degree and experience preferred. Salary open, dependent on experience. Forward resume and salary requirements to:

A. B. Dick Company
5700 West Touhy
Chicago, Illinois 60648
Attn: Thomas B. Gaines

A-V SALESMAN

We are a leading producer of industrial and slide films, television shows, training programs, etc. about to launch a major expansion of our services and facilities. We're offering an outstanding career opportunity to an ambitious, articulate sales executive with some experience in the audio-visual communications field. You will work out of our New York offices. All replies are confidential.

Training Packages Booklet

Ready-to-go audio-visual training packages can help companies accomplish seven objectives: improve salesmanship techniques, build sales, motivate and upgrade employees at all levels, train new executives, increase efficiency, lower training costs and sharpen management talent. A 16-page booklet, "How Ready-To-Go Training Programs Can Bring You More Sales, Improved Management, Greater Efficiency, and Increased Safety", is being offered to business firms.

This is strictly an industry service booklet designed to help companies find ways to upgrade their operations, and is available by writing *Close/Plenum Productions, Inc., Dept. BSC, 2020 San Carlos Blvd., Fort Myers Beach, Florida 33931.*

Southwest Talent Directory

"The Whitmark Talent Directory", which covers the southwestern states, this year has added several categories of service available to the audiovisual industry. In addition to the listings of actors, actresses, models, convention and tradeshow personnel, the directory lists technicians such as cinematographers, film editors, artists, photographers, costumers, home economists, typographers, makeup artists and many others.

Copies are available from *Whitmark Associates, Dept. BSC, 505 North Ervay Building, Dallas, Texas 75201*, at \$6.50 plus a small handling charge.

Ampex Offers Brochure

A brochure describing the complete line of 1" helical scan videotape recorders, closed circuit television cameras, monitors, lenses and accessories is available from Ampex Corporation.

The brochure, "Focus on Ampex Videotape Equipment," V69-5, is available from *Ampex Educational and Industrial Products Division, Dept. BSC, 2201 Estes Ave., Elk Grove Village, Ill. 60007.*

Kalart/Victor Bulletin

The Kalart/Victor series 75MC3 projector bulletin describes a new 16mm sound projector featuring the Marc 300 high intensity light source and power pack combination.

Write for bulletin #2702 to *The Kalart Company, Inc., Dept. BSC, Hulthenius St., Plainville, Conn. 06062*

Sony Data Sheets

Two data sheets on video equipment, the first describing the Model EV 320 color and monochrome videotape recording system, and the second detailing the Model SEG-1 special effects generator, are available.

Write *Video Products Merchandising Department, Sony Corporation of America, Dept. BBC, 47-47 Van Dam Street, Long Island City, N.Y. 11101.*

A Name with a Purpose

The objectives of Comprehensive Service Corporation are, as the name implies, to render the most comprehensive and satisfying service, with complete understanding of the needs of all who require motion picture equipment, accessories and supplies.

We point with pride to our long list of large and small customers all over the world, who have been coming to us, again and again, over the many years. Our ever expanding business is proof of their confidence in the quality of our products, our dependability and expert knowledge.

Films Needed to Spur Scientific Talent Gap

There is urgent need among the nation's teen-agers and for the large, undecided thousands of college and university undergraduates of motivational, career-guidance motion pictures to help meet the serious and growing *scientific talent gap*.

The gap between the number of scientists needed by the economy and the number available has been called "a hidden but potent force which will push up the cost of living in the years to come."

"It's a chain reaction that will be felt directly by you, the U.S. consumer," says Emanuel Piore, president of the board of trustees of the New York Hall of Science and chief scientist for IBM. Piore underlines the danger inherent in the shortage of our ability to compete successfully in world

markets with other technologically advanced nations. As an illustration, Japanese goods long ago erased their reputation for being shoddy and cheap. In fact, they are now at the top, particularly in the camera and electronic fields, because of that country's technical talents.

As of today, the U.S. has 358,900 scientists and engineers working in industry and 193,000 working in government. This is *about half* of the scientific-engineering manpower which the National Science Foundation estimated at the start of this decade that the nation would need by now.

Etcetera

All an editor has to do to stir a controversy is refer to something as the "first", as witness our calling *They Call It Pro Foot-*

ball the first American film to win first prize at the Cortina Film Festival. We very promptly learned that *Sky Divers*, produced by Winik Films, won the award in 1964.

While on the subject of correcting things, we hasten to point out that the telephone listing for Gotham Film Productions, 11 E. 44th St., New York, is listed incorrectly in our Production Review. The correct number is MU 2-4450.

Sidney P. Solow, president of Consolidated Film Industries, recently began his twenty-second year of conducting a course in the Technology of Motion Picture Processing at the University of Southern California. An enviable record.

Walter Landor Associates, San Francisco, is now at work on the fourth motion picture in the Sandoz Pharmaceuticals medical education series. An earlier film in the series, *Osteoporosis of Aging*, won several film awards for its excellence.

John and Faith Hubley, New York City, have been signed to produce a film for the IBM Pavilion at the Japanese World Exposition in Osaka next year. The Hubleys were Oscar nominees this year for the animated short *Windy Day*.

Henning & Cheadle, Inc. Expands Facilities

The second addition in less than three years, doubles the facilities of Henning and Cheadle Inc. in Detroit.

George R. Cheadle, president and founder, said the addition of 10,000 square feet accommodates an expanded art studio, enlarged photographic facilities including dark rooms, direct mail processing and storage areas, creative offices, and a fully equipped conference-projection room.

New in New York

DuArt Film Laboratories has entered the videotape field with the formation of a new subsidiary, Rombex Productions Corp. in the DuArt Building on W. 55th St.

Rombex will serve as a production operation for 1/2" and 1" videotape users. Richard Marcus, formerly VP-engineering at Reeves/Actron, is president of Rombex.

Billing itself as "a unique organization providing a new multimedia approach to the solution of communications problems," Media Productions has operated at 103 Park Avenue in New York City and 2512 Bridge Pl. South in Long Island City. President of the new operation is Burton O. Zaro.

TOOLS, TECHNIQUES AND IDEAS FOR AUDIOVISUAL COMMUNICATIONS

MEMBER • 1969

THE SCREEN EQUIPMENT

No westerns. No mysteries. No epics.

But our film program gets the highest rating in television.

Not from Nielsen or Arbitron. But from the hundreds of companies and television stations all over the country who enjoy the benefits of our sponsored film distribution program.

Last year, 289 companies who wanted to reach millions of viewers turned their films over to Modern TV. And we booked them to 788 television stations in the U.S.* that broadcast informative free films to supplement their regular commercial programming.

Result: at year's end, our clients' films had been seen on television 54,732 times.

To attract such tremendous viewer interest, these stations need a broad range of subjects — sports, travel, science, home economics, and agriculture, to name just a few. They also need films in a variety of lengths — everything from a one-

minute shortie to a half-hour series — to fill openings in their program schedules.

And they know that Modern TV's incomparable service more than meets their needs.

Modern offers them the largest and best selection of sponsored films available.

We maintain a network of six U.S. TV libraries in major cities to provide fast, personalized service.

Because the needs of stations vary widely, a full-time Modern staff of regional field representatives calls on them regularly to ask about special free film requirements.

And to stimulate film usage all year long, Modern sends out a steady stream of catalogs, brochures, film lists, and special mailers.

Does all this sound like your kind of program? Give us a call. We'll put *your* favorite film on TV.

*Canadian distribution also available

MODERN TALKING PICTURE SERVICE, INC.
1212 Avenue of the Americas, New York, N.Y. 10036

Modern is the world's largest distributor of sponsored films to Community Groups, Schools, Television, and Theaters, serving sponsors through 34 U.S. and Canadian film libraries.

Sure, you've got some great sales films. But how do you get your salesmen to show 'em?

With the Technicolor 1000—of course.

Sales films really sell. But who likes to use 'em? No one. Not with all the complicated, heavy equipment you have to cart around. That's why the Technicolor 1000 cartridge-loading Super 8 movie projector makes a big hit with salesmen. It's 19 lbs. light. Just snap in the sound film loop cartridge (with up to 29 minutes of film) push the "go" button and the show is on. No threading, no rewinding. Why don't you look into converting your current sales films to Super 8 sound film loops. It's surprisingly inexpensive. Just contact Technicolor. We'll help you put your films on the road!

ARRIFLEX 16's bring 'em back alive for Mutual of Omaha's "Wild Kingdom"

Imagine a three-foot long lizard that takes to its hind legs, and walks on water! Or another reptile with a third eye in its forehead. A bird that can regulate the time it takes to hatch its eggs. A fish that can live for days on dry land. Or a 16-ft. seal that adds 2 ft. to its length by simply inflating its nose! These are a very few of the thousands of fascinating and unusual creatures that have thrilled millions of TV viewers on NBC's unique series, Mutual of Omaha's "Wild Kingdom."

In producing the delightful programs that comprise the series, Don Meier of Don Meier Productions, Chicago, has found all the world's a stage—the Antarctic, the thick jungles of Africa and South America, the Australian Outback, mountaintops, deserts, rivers, streams, oceans—all play host to the intriguing creatures who are the "stars" of the eight year old series. The show has garnered no fewer than three Emmies and scores of other awards, but getting the kind of footage that draws such prizes is only half of Mr. Meier's problem—the other half is to reach the many inaccessible locations with production crew and equipment, to get back, and to do it all on TV's tight schedules.

Facing inflexible conditions like these, the producers choose Arriflex 16's to shoot almost all of the millions of feet that have gone into the series thus far.

Even the double-camera rig, developed by associate producer/cinematographer Warren Garst is lightweight and mobile with the Arriflex 16s cameras. This handy set-up takes full advantage of the Arriflex divergent turret; it permits the mounting of up to six telephoto, zoom and wide-angle lenses without physical or optical interference. By capturing the action on two cameras simultaneously, but with different optics, Mr. Garst is able to produce footage that intercuts as smoothly as if the animals had kindly repeated the action for a second take.

But it was most of all the out-of-the-way, inhospitable settings that demanded Arriflex. Shooting in temperature ranges from 10° below zero to 125° above . . . bouncing along over the roughest terrain, . . . sloshing through swamps, along rivers or out into the ocean . . . no TV series has ever subjected personnel and equipment to such a variety of grueling conditions.

In shooting everything from the creatures of the world to world-famous movie queens . . . productions intended to entertain the people, or to educate the practitioners in specialized fields . . . from sound stage to ocean floor, the adaptable Arriflex has made every setting into its natural habitat.

CINE Exhibition & Awards Now Two-Day Event

CINE reports that the annual Awards and Exhibition program will, for the first time, be extended to a two-day event, Nov. 13 and 14. In addition, the Presidential Ballroom of the Statler Hilton Hotel will be the scene of the International Awards Banquet which will climax the festival.

In a letter sent to winning producers and sponsors, Reid H. Ray, president of the Council on International Nontheatrical Events, explained that the number of screening hours will be doubled as the event is extended. This will allow all but the longest films to be shown in their entirety.

Screenings will begin Thursday, Nov. 13, at 10 a.m., following registration at the National

Education Association. During the afternoon the Golden Eagle awards will be presented to the winners. This event will be filmed. The final event of the day will come with the introduction of Golden Eagle, and Cine Eagle winners and the exhibition of films of merit at 7:30 p.m.

Screenings will be continued Friday at 9 a.m. A new feature Friday afternoon will be a briefing and panel discussion aimed at increasing world audiences for American films. Additional sessions will cover the process of selecting Golden Eagle and Cine Eagle films as well as outlining the characteristics of International film festivals.

Because of the popularity of the annual CINE event and the limited capacity in other years, the new location for the banquet no longer limits the number who

can attend. Foreign diplomats will present international awards and films of world acclaim will be shown. A producers and sponsors reception will follow.

Teletronics Expands to Full Service Videotape

After only one year of operation, Teletronics International is completing a major expansion program designed to increase its capacity threefold. The enlarged custom video tape facilities will serve all TV commercial producers directly and the new format will remove Teletronics from the role of competitive bidder on storyboards.

Two complete tape production units, featuring the miniaturized color equipment that Teletronics pioneered, are now available on a daily basis. Location photog-

raphy, both interior and exterior, is highly practical with these new cameras and recorders which pack into a station wagon and can be powered from a kitchen AC outlet.

Five editing rooms and two posh screening rooms are backed by a new Ampex high band tape recorder installed exclusively for screenings—all day long.

Broadway Musical Using A.V.E. for Visuals

All of the audiovisual equipment used in the presentation of the new Broadway musical "Jimmy" was provided by A.V.E. Corporation.

The equipment, custom designed by Cliff and Karl Van Praag, is tied to an automatic programmer which coordinates

Continued on page 10

Or a bigger sales presentation, welding demonstration, or econometrics graph, for that matter.

Presenting exactly the same audiovisual woodchuck to different audiences doesn't always make sense. That's why we built two-way versatility—audio and visual—into our Mastermatic 35 mm sound-filmstrip projector.

First, Mastermatic gives you a choice of woodchucks, dependent on the size of your audience. You can have built-in rear screen projection for individual or small-group presentations, or reposition the projector and switch lenses for conventional front screen projection for larger groups.

Second, it's just as easy to change the audio portion of your

presentation for specific audience needs. Our patented UNIPAK cartridge houses both the 35 mm filmstrip and the separate magnetic sound tape in one compact unit; replace the tape sub-cartridge, and you can alter the language, educational level, or the entire emphasis of your audio-visual presentation at will.

With the Mastermatic projector, there's no elaborate set-up, no loss of synchronization (even if you interrupt the show), and no rewinding of film or tape. You can set it for continuous run and automatic shut-off, or

(For 300 people, you need a bigger woodchuck.)

for manual operation; 15 or 30 minute program capability, up to 210 frames.

Not everyone responds to the same woodchuck. It depends on how you look at it. And hear it. Make sure your presentation has the versatility of a Mastermatic projector.

Write for our illustrated brochure, or ask us to call you to arrange a demonstration. ELCO Optisonics Division, ELCO Corporation, Montgomeryville, Pa. 18936.

Advanced audio-visual film projection systems

SLIDES

BUSCH Cine-Slide Projectors have many special features, including: Big 14" x 14" built-in Daylight Screen; 80-slide capacity; automatic or manual operation with Kodak Carousel projector. Available with or without sound unit. The Busch Cine-Slide Projector is versatile, dependable, portable and lightweight.

16 MM

BUSCH Cinesalesman self-contained, continuous 16mm projectors are dependable, portable, versatile. Available in variety of models to meet any requirement for continuous or rear-screen projection. Unit has 20 years of proven performance with many patented, exclusive features found only on world-famous Busch Cinesalesman projectors.

BIG SCREEN

The Big Screen 16mm continuous BUSCH Cine-Educator Projector is dependable, self-contained, mobile and beautifully finished in Walnut Formica. Special features are: push-button start; automatic cycling stop; auxiliary cooling system, and high-quality sound. Heavy-duty projector units with many exclusive features. This unit can also be supplied with Slide Projector in place of the 16mm Projector.

SPECIAL UNITS

We have 25 years of experience in the design and manufacture of complete Audio-Visual systems for schools, business and government. We can engineer and manufacture any requirement you may have for Special Projection devices or systems such as multi-screen projection systems, synchronized projection, complete remote control or projectors and many others.

the audiovisuals with the performance.

The equipment used includes A.V.E.'s X-500 xenon Carousel, 16mm X-300 projectors, and two specially designed "Power-house" xenon horizontal film-strip projectors.

The show is a good example of the use of carefully programmed visuals being used to add to the excitement of the performance.

Association Films Moves Two Distribution Centers

Because of the recent expansion of its library of free loan and sale/rental films, Association Films, Inc. has moved two of its eight distribution centers to larger quarters.

The Dallas, Texas exchange is now located at 8615 Directors Row, telephone (214) 638-6791.

The LaGrange, Illinois office is now located at 512 Burlington Ave., (312) 352-3377.

Requests for bookings and catalogs in these areas should be directed to the new addresses for prompt attention.

TM Productions Opens Dallas Recording Service

TM Productions, Inc. has opened a recording service in Dallas, Texas at 3102 Routh St.

The studio was designed by John Phillip Edwards of Hollywood. It is complemented by one of the finest groups of recording apparatus ever assembled in Dallas, comprising tape recorders ranging from 2 to 16 tracks.

President of the new firm is Tom Merriman, whose credits include an Academy Award and a Cannes Festival Award. Director of recording operations is Tim Dennis, both a master musician and audio engineer.

Alan Gordon Makes Large Rental Division Addition

Alan Gordon Enterprises Inc. has added \$225,000 in motion picture equipment and accessories to its Rental Division inventory.

Loucks reports that the largest

addition is that of new Mitchell BNC Reflex cameras. The BNC Reflex is the latest model 35mm camera to be developed by the Mitchell Company, which has been major supplier of studio cameras for the past 40 years. The BNC-R retains the familiar operation of the BNC but eliminates the need for racking over and provides full reflex viewing.

Other new rental items include the Elemack Spyder Crab Dolly, several new Arriflex cameras plus several thousands of dollars worth of new ColorTran lighting equipment and the new Eclair crystal control synchronous motor.

Further information on these items and other rental equipment may be obtained from AGE Inc., 1430 N. Cahuenga Blvd., Hollywood, Calif. 90028.

Morgan Opens Production Company in San Francisco

Jim Morgan, formerly executive producer at Film Communications for Walter Landor and Associates Industrial Design, has established his own production company, J. C. Morgan Film Productions, at 1255 Post Street San Francisco 94109. Charles W. (Chick) Collier, formerly president of the American Advertising Federation, is sales consultant for the new organization.

Weiman Co. Completes Acquisition of AGS&R

Weiman Co., Inc., Chicago, has completed the acquisition of AGS&R Studios, Chicago, a major audio-visual producer.

The assets of AGS&R were purchased for an undisclosed amount of common stock. Terms also call for additional payment in common shares based upon the acquired company's future earnings. The transaction will be treated as a pooling-of-interests.

AGS&R, one of seven announced Weiman acquisitions since January, is the fourth to be completed. It will operate as a Weiman subsidiary under present management headed by its founders, Aaron Gordon, president and Arthur C. Allen, executive vice president.

ALL AURICON EQUIPMENT IS SOLD WITH A 30 DAY MONEY-BACK GUARANTEE.

100 ft. film capacity for 2¾ minutes of recording; 6-Volt DC Converter or 115-Volt AC operation. — \$1180.00 (and up).

When a Nation Fails to Communicate the Uninformed Take to the Streets

ON THE DAY of the recent "Moratorium" urging America's withdrawal from Viet Nam, we attended the Industrial Audio-Visual Association's annual fall meeting in Philadelphia. Alert to other national concerns of this era, the program theme "To Be Aware" alerted these professional managers of corporate sight/sound activities to the "basics" of such subjects as "Alcoholism and Drug Addiction in Industry", "Communicating with the Black College Graduate", "Film and the Now Generation" and the problems of "Doing Business in Our Society."

It was stimulating to view the multi-screen, hard-hitting "Problems of Our Times" presentation which Ohio Bell Telephone has used to stir citizens of that state into community action; it was important to share the "case history" films being used by Claude L. Foulkes of IBM in that company's resultful attack on minority prejudice among managers. IAVA's program also introduced film makers of the "now" generation and took its members into the progressive, personnel-oriented activities of Sweden's Council for Personnel Administration.

While less than a hundred men and women of varying degrees of corporate influence in the "communications process" were alertly discussing these worthy objectives, nearly a million Americans (most of them young people) were on the streets of our large cities protesting their country's presence in Viet Nam. The greatest national failure in communications in America's history took place on "Moratorium Day." For actions responsibly taken by four American presidents, endorsed

by the Congress, and approved by the great majority of our citizens and the mass media were now labeled "sinful" at least and "murderous" at worst. It was hardly comforting to read that the loudest applause for the protesters came from the Kremlin and Hanoi.

Readers of this column are among the keenest "film watchers" in the U.S. and abroad. Very much aware of the depth of understanding of the most complex problems and situations which can be brought about through their *visualization in sight and sound*, they have sought in vain through the past five years for comprehensive film interpretations of the people of Viet Nam, the aspirations of both South and North, their economic problems, political differences and the like. A single film, *Mekong*, delineated the vital resources development program of the United Nations, was sponsored by Shell International and prints finally reached Americans through the Shell Oil Company's film library in Manhattan.

Are the war-weary people of South Viet Nam now to become the helpless victims of those who have found polarization for protest against their government but paradoxically find no fault with the invading armies of North Viet Nam and those who supply them?

At Philadelphia, near the Cradle of American Liberty, a key phrase from the recent past reverberated:

"Unless you tell people all the facts, they will invariably draw the wrong conclusions on their own." We paraphrase, but with fair accuracy, from Champion Papers' excellent film on communication, *Production 5118*.

And it might be inscribed on the crosses of the nearly 40,000 young Americans who will have died in vain in that land, *"what they*

continued

don't know, can kill you."

The Federal Government, forbidden to use the medium of film to inform the American people by a Congress fearful of propaganda, has turned out many films on Viet Nam for overseas showings. The television networks have shared the horror of jungle and swamp battles as "news" and, all to infrequently, have produced a few hours of background footage. The United Nations has deplored the conflict in assembly and showed us nothing of its reasons.

Providence has given nearly every country and especially the U.S. a tremendous resource for idea communication. Not only our television sets and our still-viable cinemas but nearly a million 16mm sound projectors and increasing numbers of 8mm machines stand waiting in community halls, churches, labor temples, the nation's classrooms and industrial plants. *Waiting for what?*

Will the lesson of the "Viet Nam We Never Knew" serve to remind free men everywhere that we are *all* involved and that all may suffer the consequences of such failures in communication? The lesson applies with equal effect to other world areas of conflict still facing us. And it applies, with the relentless

law of cause and effect, to domestic issues: race relations, population growth, productivity and profits, nuclear power, pollution and the so-called "generation gap."

Paraphrase loudly again: within America's business, "what your workers and your public *don't know* can hurt you." And consider the absence of truly nationwide programs of information and knowledge needed to make proper public decisions on solutions to pollution, on the understanding of black aspirations to equality, on the strength of America's economic system and such other problems which confront us in a world grown smaller and more crowded by the hour.

At Philadelphia, among these professional audiovisual managers, it was relevant to ask "but what can we really do about it?"

And the answers were really all around us. If you have millions to appropriate for television entertainment, spare a modest percentage for film and television information; if you have audiences of thousands of employees, share today's concerns via the screens of cafeterias, locker rooms and plant town meetings, by truthful, factual and well-conceived motion pictures. Within your audiovisual departments, is there knowledge of already available films your managers and employees should be seeing?

Companies like Caterpillar Tractor and Dow Chemical, among others, have blazed sight/sound trails with community action film programs; others have been "wisely selfish" in realizing the actuarial curves which affect insurance, automotive and petroleum profits through accidental death and wasteful injury.

It just takes guts and money. The lesson of Viet Nam is not yet fully written but the record of ignorance of that land among us is unmistakable. "We have nothing to fear but fear itself" and fear born of ignorance is unforgivable in an era where we have been provided with tremendous resources for achieving real understanding. —OF

Medium Hot!

Been to the movies lately? If so, chances are you may have seen a sponsored short along with the main feature. Increasingly sponsors are using the big screen medium to reach big audiences. It's got a lot going for it, too. Arc-bright projection. Hi-fi sound. Plush surroundings. And people—in large numbers. It's a prestigious showcasing for sponsored films and one that is attracting considerable interest these days. A recent front-page story in *The Wall Street Journal* was headlined, "What's at the Bijou? Many Movie Shorts Have Soft-Sell Pitch."

We've put out a booklet that answers many of the questions sponsors and producers have asked about theatrical distribution. We'll be happy to send you a copy and—if you like—screen your film and evaluate its theater potential. Medium hot? And getting hotter all the time!

**THE
 NEW
 MITCHELL
 BNC
 REFLEX**

Mitchell has designed an incomparable reflex system into the BNC. This is no makeshift "conversion" but was designed as an integral part of the time-tested BNC to give the film-maker every desired studio capability including zoom lens control.

Features:

- 93% reflective stainless-steel mirror alternates full light between reflex optics and film.
- Mirror and film shutter rotation engineered for dynamic balance and flicker-free film.
- Built-in power rectification for silent zoom lens controls and inside-housing illumination.
- Operating sound below 24db at 36" from pickup microphone.
- Standard BNC operation and controls but without rack-over requirement.

Test-fly our new movie projector.

It goes up airplane passenger ramps.

And under airplane passenger seats.

Turn it into a theater and insert your company.

Push one button for instant image, sound and attention.

Introducing the Fairchild Seventy-21, our new portable, pop-up Super 8 Sound showroom.

We built it to go where you go. For the new businessmen who don't have time to waste waiting at baggage counters.

And we built it for audiences who are too busy to watch a projector being threaded. (The MoviePak[®] cartridge eliminates the problem. As well as the need for rewinding)

Your public isn't too busy to be entertained, though. We've proven that over the years. With movies for selling. For training. Or even for recruiting.

One final word. The Seventy-21 has been engineered to meet all of the standards for 8mm's future.

Super 8 film, with a +18 image-to-sound separation. And with magnetic sound striping.

What does this mean to you?

Among other things, that existing 16 and 35mm programs, as well as videotapes, can be converted for use in the Super 8 MoviePak.

And that magnetic sound tracks can always be updated or even added to silent films.

Write or call for all the information on the newest in communications technology. And if you're in a hurry to get the show on the road, ask for one of our famous 2 second demonstrations.

We'll have someone from our nationwide dealer network give you a screen test.

PROUDLY OFFERS YOU
SOUND FOR YOUR BOLEX!

An inexpensive, high-quality, lightweight sound-on-film module, newly-improved, converts your 16mm Bolex to a single-system magnetic sound camera. Its excellent performance matches or exceeds professional standards.

The Boly-Sound transistorized amplifier is designed especially for use with this module.

Boly-Drive, installed within the camera, replaces the spring-wind mechanism, assures constant speed—24 f.p.s. \pm 1%—and permits installation and use of 200' or 400' magazines.

Now—your Bolex becomes more versatile, more effective, more productive than ever. For detailed information, write to

Videotape Association Formed in New York

Group aims to expand use of videotape through continuing information and familiarization programs.

Over twenty of the leading video tape companies have organized an association to promote and further the use of video tape as a medium of communication. At the first general meeting in New York, the companies passed a charter and by-laws and elected Morton Dubin, vice president of MPO Videotronics as its president. Other officers include Joe DiBuono of WCD Productions, vice president; Lucien Lesard of Tele-Tape, secretary, and E. Grey Hodges of Reeves Production Services, treasurer. Three others elected to serve on the board of directors include Peter Hollidge of Advertel, Ed Grower of Centrex and Jack Murphy of Lewron.

The group hopes to expand the use of tape by establishing and providing continuing information and familiarization programs; stimulating an interchange of ideas and discussions of mutual problems; having equipment manufacturers and distributors speak and demonstrate their equipment in the rapidly changing field of tape; providing an industry voice with which to communicate to the manufacturers of tape equipment what the industry's needs are and providing a source of general information about video tape.

Dubin emphasized that the Association does not intend to become a union negotiating group.

Charter members of the group include: Advertel, Ampex Corp., Centrex Productions, DiCaprio Productions, Eastern Video Productions, Editel, Filmways, Glen Warren Productions, International Video Corp., Jefferson Productions, Lewron, Logos Teleproductions, Motion Associates East Inc., Motion Picture Camera Supply, MPO Videotronics,

N.B.E. Productions Ltd., Reeves Production Services, Rosner T Systems, Tele-Tape Production Technicolor, Teletronics International, Transmedia International, WCD Productions and Western Video Industries.

After just three weeks in existence, the Videotape Production Association had received 3 applications for membership. Videotape companies from six cities in New York, Indianapolis, Miami, Hollywood, Charlotte and Alexandria, Va., as well as London and Toronto indicated interest in the group.

One of the first programs initiated by the association is an orientation program to further acquaint agency producers with tape. Eventually the program will be expanded to include art directors and copywriters.

Several association committees have already held organization meetings including the technical and program committees.

Full membership in the association is limited to video tape production companies who have produced at least 10 video tape productions and suppliers of video tape manpower and video tape facilities. Association membership will be open to firms, companies or corporations engaged in the business of manufacturing, distributing or supplying video tape equipment whose gross video tape volume is estimated in excess of approximately \$2,000,000 per annum. Allie membership will be open to firms, companies or corporations who are engaged in business in fields related to video tape but who do not qualify for full membership or associate membership. Any other companies ascribed to the aims of this new organization can contact Morton Dubin.

Meet Us at the DAVI Show

Everyone's got something.

One's got everything.

There are so many portable projectors on the market, the claims can sometimes be confusing. One has its own screen. Another throws a large wall picture. One has a repeating cartridge. Another operates reel to reel. One folds to compact carrying size. Another is a real knee-knocker.

But whatever your reason for wanting a projector, you should want one that is versatile enough to do anything and everything it's possible for a repeater projector to do. And do it well.

You should want the MPO Videotronic Super 8.

This machine is perhaps the finest portable repeater projector ever made. It weighs in at a mere 18 lbs. It's cartridge loaded, so there's no film threading or rewinding ever.

The MPO Super 8 comes with its own

built-in screen for easy desk top viewing. Draw a larger audience, and the Super 8 converts to big wall picture projection instantly. And because your message may take longer than the average 10 or 15 minute film, the MPO has a reel-to-reel accessory that will show up to 50 minutes of footage. And it's the only automatic projector that can do it.

We're so sure that our projector can outdo any other, that we're anxious to show you both side by side for a personal inspection. Simply tell us which of our competitors you'd like to compare to the MPO. We'll arrange to show you theirs and ours, so you can test and judge for yourself.

Unusual offer, we know.

It's not something anyone would do. Just the people who have the one that's got everything.

The MPO Videotronic Super 8

"The Professional" Shows Salesmen's Expertise

Currently doing a lot for the status of salesmen everywhere is Dartnell's new film *The Professional*. Featuring Van Johnson and Forrest Tucker in the lead roles, the film underscores the point that a salesman is just as much a "professional" at his business as the doctor, lawyer or cleric.

The story follows a middle-aged, middle echelon salesman (Van Johnson) through a series of business and personal experiences wherein he questions, then becomes convinced of his professionalism.

Helping to open his eyes to his real position and status in life and his community is the firm's top older salesman (Forrest Tucker). The older salesman

The salesman gains the admiration of his son during this scene from "The Professional."

even better.

Complete details on rental, purchase and preview arrangements are available from *Dartnell Corporation*, 4660 Ravenswood Ave., Dept. BSC, Chicago, Ill. 60640.

Winchester-Western Begins Ambitious Film Program

Olin's Winchester-Western Division has embarked on an ambitious motion picture program.

"Industry has a responsibility to the community that outweighs the need for pure 'entertainment'," William E. Talley, vice president for marketing of the division, said during the New York City premiere of two new major films in the company's 1969 schedule. "Winchester has a commitment through the medium of film to inform, enlighten and educate in the area of outdoor recreation through motion pictures. We hope to expand the theme that man's survival is predicated on managing, and not destroying, his environment. Game is a crop that must be harvested as any other to insure proper balance in ecological management."

Winchester's film program includes two new major productions; the 28-minute 16mm color films *The Upland Gunner* and *Wild in the Sky*. These two and four other new films represent the first plateau in Winchester's motion picture objectives.

With the exception of *Clay-birding Goes Collegiate*, 16mm

color prints may be obtained free of charge by contacting Modern Talking Picture Service, Inc., 1212 Avenue of the Americas, New York, N. Y. 10036. *Clay-birding Goes Collegiate* may be obtained by contacting Winchester-Western directly at 460 Park Ave., New York, N.Y. 10022

Warning About Smoking Stars Richard Boone

The Mark Waters Story, an anti-smoking movie based on a true story, recreates the heart-breaking but heroic drama of a newspaperman who wrote his own obituary while dying of lung cancer. It began with this memorable statement: "Cigarettes were the death of me." Waters began his obituary only five days before his death and made final corrections only 10 hours before the end. It appears in his newspaper, the Honolulu Star-Bulletin, on the day he died.

Richard Boone volunteered his services as director and plays the role of Mark Waters. So strong is the emotional impact of the film, keyed by Boone's performance, that the film is not appropriate for children. This 25½ minute 16mm sound color film was produced by KHET educational television station in Honolulu. It is available from Modern Talking Picture Service.

Methods of Arbitration Taught to Insurance Men

Arbitration in the insurance industry, with particular emphasis on the all industry Nationwide Inter-Company Arbitration Agreement is graphically described in a new 14-minute film, *The Paper Sword*. The film uses a variety of visual techniques, including some interesting and novel puppets, to impress upon the audience how to improve their performance in arbitrating cases under the Nationwide Inter-Company Arbitration Agreement. It highlights areas wherein mis-

understanding can cause difficulty in the proper use of these facilities. A purpose of the film is to instruct representatives on the effective procedures to follow to secure full benefit from the arbitration programs.

The film is available on a loan basis for signatory company training programs, seminars, etc. It can also be borrowed for meetings of claim personnel and other groups interested in the all

Clever puppets point out effective procedures in arbitration program.

industry arbitration programs.

The Paper Sword was produced by Animatic Productions, New York. Inquiries on the film should be directed to Bernard L. Hines, Jr. Secretary — Committee on Insurance Arbitration, 85 John St., New York 10038.

Filmstrip Programs Promote Understanding

Through the eyes of black and white Americans, "soul brothers" in the truest sense of the term, more than two hundred years of the American experience — from 1730 to the present — are vividly recreated in a multi-media sound filmstrip series, *Men of Thought, Men of Action*. Nine units, each complete with filmstrip, record, teachers guide and study prints, compare and contrast the lives of men, black and white, who brought their unique visions to bear on significant themes in American history.

A second filmstrip program, this one in six parts, takes a behind-the-scenes look at what is involved in a black citizen's achievement of political success in this country. *Black Political*

Achieving his professional status, the rising salesman (Van Johnson) learns from the tutelage of the "old pro" (Forrest Tucker).

leads the younger man through a five part puzzle involving five vital points of sales professionalism.

As the younger man gradually works his way through the puzzle, his sales increase, his outlook brightens and he both exudes and gains professional respect.

Filmed in Chicago by Take Ten, Inc., *The Professional* along with a well-planned package of collateral materials can be a strong motivational influence on any sales force, and a good addition to any sales training program.

Following closely on the heels of the successful *Second Effort* starring Vince Lombardi, early responses to *The Professional* point to the fact that it will be

We deliver people ...not just numbers!

... and that's the beauty of movie theater distribution of PR films. You can measure audiences accurately, literally count heads, know exactly how many people have seen your film.

Indeed, United World, thanks to its ties with Universal Pictures-MCA, has been able to develop the theatrical markets of the nation into one of the most **efficient** forms of PR film distribution.

Even paid TV or print advertising can't really be as precise in measuring its audience. There's no way of knowing exactly how many viewers or readers actually got **your** message. But with movie theaters, we **do** know.

What's more, the comfort of today's theater, the lack of distractions in the darkened room

— and the lack of competition with the convenient kitchen refrigerator — will help make any message digestible.

Will your film "make it" in the theatrical market? There's one certain and quick way to find out. Check with the man from United World. He's got ample experience to feed you figures on audience totals, costs per thousand (generally, quite low), and an honest appraisal of your film's marketability.

And ... whether it's strictly movie theaters, or a mix that includes television and 16mm non-theatrical ... specific or general group audiences ... we'd be happy to show you why it pays to discuss your film distribution with the man from United World.

Films Teach Principles Of Communication

Roundtable Films has released a series of four films whose purpose it is to improve business communication through the use of proven training techniques. *Engineering of Agreement* demonstrates directive and non-directive techniques that are basic to obtaining cooperation, winning acceptance for programs and handling differences of opinion. *The Way I See It* attacks the problems behind job assignments that fail, goals that are never reached and work relations that deteriorate.

Person to Person Communication analyzes the major barriers in face-to-face communication and demonstrates specific practical methods for overcoming these barriers. *The Anatomy of a Presentation* shows how to organize, prepare and deliver oral presentations in an interesting and persuasive manner.

For information write Roundtable Films, Inc., 321 S. Beverly Dr., Beverly Hills, Calif. 90212.

Navy Releases Films On Oceanography

Three 16mm color sound educational films, produced by the Public Affairs Office of the Oceanographer of the Navy, have been released for free public use.

The Nature of Sea Water, 28½ minutes, explains the physical and chemical properties of sea water, and shows how understanding them is the basis of the study of oceanography.

Modern Geodetic Surveying, 20 minutes, explains the origins and development of geodetic surveying and man's progress in measuring the earth.

Oceanographic Prediction Systems, 28½ minutes, describes recently developed Navy prediction systems and tells how they now permit man to better

understand and make fuller use of the ocean environment.

Prints are available from Public Affairs Offices of all Navy Districts.

Indianapolis 500 Featured in Goodyear Film

The human drama of auto racing, unseen by the crowd, is the subject of *Once Upon a Friday* which views the Indianapolis 500-mile race through the eyes of a veteran driver and a rookie. It reveals the thoughts and emotions of Dan Gurney, who was making his eighth attempt to capture the prize which had previously eluded him, and Mark Donohue, who was trying for the first time. Both express their feelings during the agonizing wait for the signal to start their engines.

Highlights of the 53rd running of the Indianapolis 500 are also a part of the story as Gurney again had to settle for a second place while Donohue won "Rookie of the Year" honors with his seventh place finish.

The film is available from the Goodyear Tire & Rubber Company, Public Relations Film Library, Akron, Ohio 44316.

Film Aids Management Employee Relationship

Some of the most difficult problems faced by managers who must work with and through other people to attain organizational goals — problems of morale, productivity and turnover — are discussed by Dr. Abraham Kaplan, professor of philosophy at the University of Michigan, in a 16mm film, *Human Considerations in Management*, available for purchase or rental from the University of California Extension Media Center, Berkeley.

In a lively, spontaneous and stimulating discourse, Dr. Kaplan points out that management is hindered, not advanced, by the conventional patterns of behaviour that managers as well as employees often hide behind. When people break through depersonalized responses, the astute manager perceives an opportunity.

ity to establish a genuine relationship which can bring with it loyalty, enthusiasm, imagination and excitement.

Claxton Completes Fashion Trilogy

With the completion of the "Mademoiselle" magazine fashion film, *Explo-Fashion on Campus '69*, Bill Claxton has finished a trilogy of fashion films started when he produced and directed *Basic Black*. Both *Explo* and *Man in the Trevira Era*, the second film in the series, were produced by MPO.

Explo-Campus '69 is a 15 minute color film based on the August issue of "Mademoiselle". It is being used for advertiser, agency and department store promotion.

Film Provides Facts On Man-Made Fibers

A color film designed to give consumers the latest information on fabrics of man-made fibers has been released by the Du Pont Company. *The Way it is With Man-Made Fibers* tells the story of a typical woman shopper and the questions which confront her in selecting from scores of household and apparel items. Cutaways to demonstrations and animation are used to provide the viewer with information and terminology needed to understand differences in fiber, type of fabric and blends.

The film was produced by Jam Handy Productions. Requests for loan should be directed to Motion Picture Section, Advertising Department, Du Pont Company, 1007 Market Street, Wilmington, Delaware 19898.

Australian Water Sports Featured in Kodak Film

Cameras are focused on Australian water sports in the film "What's Up Down Under?", sponsored by Eastman Kodak Company.

Sailing enthusiasts will find excitement in the thrills and spills as 18-foot boats race to raise their colorful oversize sails in close maneuvers as well as the

surf club competitions and surf boat racing.

The theme of the film is water—near it, in it, or under it. It ranges from the less active beach sports of balloon-blowing contests for senior citizens to diving through blow holes for underwater activity.

This 20-minute film is available from the Audio-Visual Services Department, Eastman Kodak Company.

Archaeological Findings Authenticate the Bible

Recent archaeological discoveries in the Holy Land which support the authenticity of the Bible are reviewed in a 16mm-sound film called *Archaeology Proves the Bible*. The Dean of Archaeology at Jerusalem's Hebrew University, Professor Yigael Yadin, appears in the 28-minute color film to discuss the findings and their significance.

The free distribution of this film is sponsored by Dawn Bible Students Association which also sponsors the distribution of *The Unknown God*, a film about the Apostle Paul's controversies with the heathen philosophers, and *The Search for an Answer* in which the question of future life is discussed.

Write Modern Talking Picture Service for information on any of these films.

High Energy Physics Research Explored

The Atomic Energy Commission has released three popular-level motion pictures dealing with the use of particle accelerators in high energy physics research.

People and Particles, 27 minutes, shows the life, thinking and work of a team involved in a research project in a modern high-energy physics laboratory. The film follows a team as it sets up and tests one of the basic theories of modern physics—quantum electrodynamics.

Synchrotron, 14½ minutes, uses live action and animation to discuss the components and operation of the Cambridge Electron Accelerator. *Exploring the Atomic Nucleus*, 13½ minutes,

photographed in part at Argonne National Laboratory, describes particle accelerators, the basic tools of high energy physics.

Prints of the motion pictures are available for free loan from film libraries of the Atomic Energy Commission.

Pleasure Boating Offers Career Opportunities

Boats Need People, a 13 minute color film on the subject of job opportunities in the pleasure boating industry, was produced by Victor Kayfetz Productions, Inc. for the National Association of Engine & Boat Manufacturers. It illustrates the decade of growth of the industry, the future of the market, and the career opportunities open in this expanding field.

Prints are available on a free loan basis from NAEBM Film Library, 295 West 4th Street, New York, New York 10014.

Color and Humor In Film About Holland

Using a swiftly-moving montage of colorful shots and brief sequences of the rich land and produce of the Netherlands, *Holland: Terra Fertilis*, tells the story of Holland, without narration, but convincingly and with humor. Quick cuts, juxtaposition of images, and a lively musical score are used to give strong impression of the richness of Holland's agriculture, and the high degree of skill involved.

This 11 minute, 16mm film was produced by Carillon Films and preview prints are available from ACI Films, Inc., 35 West 45th St., New York, N.Y. 10019.

Giant Aircraft Presented In Air Force Film

C-5 Galaxy, World's Largest Aircraft, is a 28-minute documentary which the entire family will enjoy, and which will be of interest to aerospace organization and to Department of Defense personnel. The movie explains, in color, how the gigantic transport was manufactured, why it is needed, its unique capabilities as subsystems, and the revolutionary impact it will have on military and civilian transportation.

The film was produced by Cinecraft, Inc., Cleveland and is available from Air Force Book film libraries. Ask for film #S 1768.

Packard Bell Shows Story to Dealers

PACKARD BELL is literally taking its television and stereo manufacturing facility directly to its distributors and dealers with luggage-type self-contained projectors to dealer showrooms to relate entertaining sales stories, reports George O'Leary, manager of product training.

Already the West's largest television and stereo manufacturer, Packard Bell selected this technique to reach its burgeoning audience because they can tell an almost complete product training story in a relatively short period of time.

Initially, Packard Bell's product training activities employed actual products, flip charts, and slide presentations during meetings O'Leary has held throughout the country since 1964. The presentations explained the technicalities of cabinetry, furniture design, product features and benefits. These were backed by the industry's first feature comparison charts, which the company began circulating to distributors in the early 1960's.

Now, the distributor salesmen are participating in the manufacturer's product training program by learning more themselves and carrying projection units into the dealers' showrooms.

"Everyone knows that a salesman will concentrate on and sell the merchandise he knows best," O'Leary said. "Our new techniques have depended on developing aural and visual concepts so the distributor can easily relate a sales point to the dealer, an important adjunct to existing training programs."

Four professionally produced and narrated 16-mm color filmstrips packed individually in "pop-in" cartridge form are devoted to specific sales point areas of color television, stereo, furniture craftsmanship and a Packard Bell Story. The latter includes the firm's history which starts with the introduction of the nation's first AC table model radio in 1926 through the development of sophisticated, modern color television receivers.

Currently, each presentation filmstrip adheres to a specific story line and may be run in any sequence, with the distributor simply alternating the cartridge. Filmstrips vary in length from five to seven minutes but can easily be expanded to twenty-four

Four different color slidefilms with narrator cover television, stereo, furniture and the Packard Bell "story."

Why are filmmakers switching to CINE 60's POWER BELT?

* Because

CINE 60 OFFERS YOU THE MOST ADVANCED CONCEPT IN BATTERY DESIGN

- Rechargeable Nickel Cadmium Batteries built into a handsome easy to wear belt.
- Completely sealed battery cells, maintenance free.
- Built-in charger and coiled charging cable.
- Automatic overload switch for protection against short circuit. This switch functions as an automatic fuse, which will reset automatically and will never have to be replaced.

SINGER
EDUCATION & TRAINING PRODUCTS

THE AMERICAN open house, long recognized as one of our culture's most archaic institutions, took a giant step towards the twentieth century with the aid of mixed-media and an enterprising, young advertising agency in Long Beach, California.

A "creative environment" open house was planned to open a new suite of offices located high above the Long Beach waterfront or three-year-old Davis & Associates Advertising. The agency wanted to show more than just furnishings and panelled wallboard. It felt the event should reflect the environment of advertising, showing creativity, sensory stimulation, and imagery common to the advertising world.

This made the usual open house with its sterile formality and ghastly small talk, both appropriate and obsolete.

Agency Creative Director Jim Szalapski designed a format intended to strikingly involve the senses and emotions of the 400 guests invited. Relying heavily on mixed-media, the physical format is shown in the accompanying diagram showing spatial relationships of the various elements selected for the open house.

The event was announced by a mailer which included an oversize psychedelic poster introducing the agency principals with short, elliptical prose statements, and a colorful invitation written in the spatial style of e. e. Cummings asking the receiver to "open your mind . . . inside the hyper-creative environs of advertising," at the agency's open house.

In short, an unusual experience in the form of an open house was promised to those choosing to attend.

Upon arriving, guests were given a short tour of the new offices with art facilities, then were shuttled in small groups by elevator down to a large, bare concrete-floored room used for the environmental open house. Once inside, guests were bombarded by diverse stimuli all selected to say, "Davis & Associates is an advertising agency. It's creative, exciting, new, and fun."

Windows (8 feet in height) surrounded two sides of the room and were completely covered with giant poster segments from billboards arranged in a totally distorted manner. Giant images of quarter-faces, split words, and color splashes glowed muted light into the room from the late setting sun until well-dorned the concrete surfaces of the remaining walls. These giant graphics distorted scale, creating a state of anomie and added bold impact to the room's effect.

Three carousel projectors aimed at a series of screens flashed 500 color slide images of the agency's personnel and samples of their work in varying sequence every six minutes. Two tape recorders played continuous acid rock music interspersed with mock commercials and put-on announcements, such as the winner of the door prize drawing is Mrs. Marshall McLuhan. Please come to the ticket counter at once." A four-sided graffiti panel surrounded one pillar, equipped with four roads, felt pens, inviting the guests to create their own pop expressions for all to share.

Mind-Boggling Open House

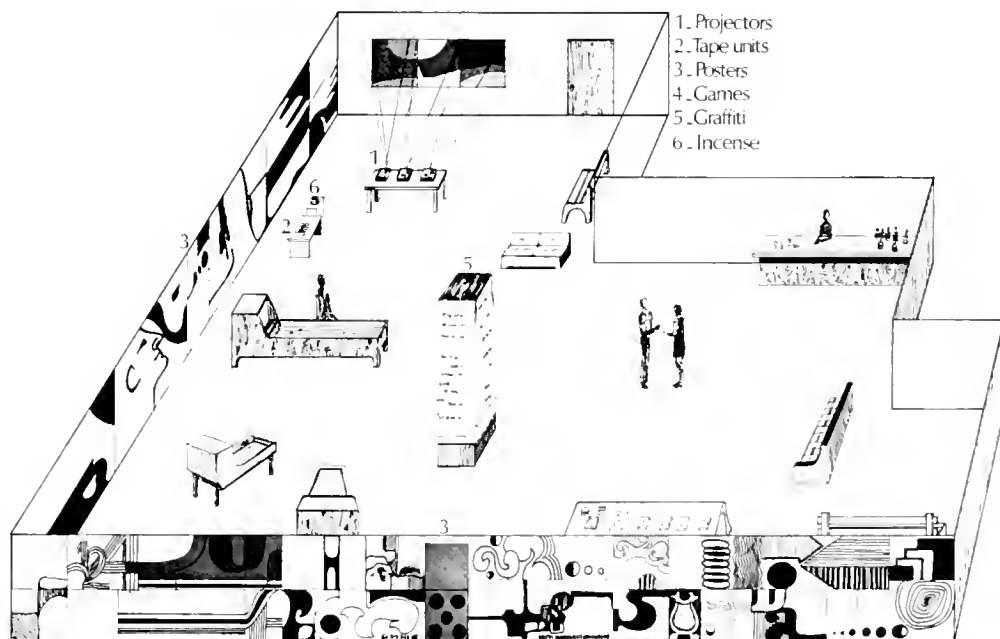

Here's how a few clever ideas and relatively inexpensive effects can take the staid American open house and turn it into a memorable experience for those attending.

Active participation by all guests was encouraged by this oversize graffiti sheet.

Sorting slides for the mixed-media open house is Chuck Davis, president of the agency.

On this assignment, the cameraman had to disguise himself as a delivery boy, and shoot scenes on board a New York City bus with his camera inside a cardboard box.

On board ship, cruising to Bermuda, the filming crew pretended they were tourists, and carried the camera and recorder to each new secret setup inside small suitcases.

What they were doing was shooting sync sound sequences for (gasp!) Candid Camera. What they were using was an NPR.

Smile — you're on Cardboard Box.

The cameraman boarded the bus with his cardboard box, and sat down by himself. The soundman got on at the next bus stop, with his Nagra in its leather case hanging unobtrusively from his shoulder. The director was waiting at the next stop, with a trombone player from the local high school band, in full band uniform with trombone. And at every stop thereafter, another member of the band, in uniform with instrument, climbed on the bus and joined those already on board in playing selections from Sousa.

Through the small holes in his cardboard box, the cameraman shot the bus driver's reactions, which ranged from amazement

to fury. When the driver stopped the bus to look for a policeman, director-interviewer Bob Schwartz tapped him on the shoulder and delivered the immortal lines: "You're on Candid Camera." The bus driver didn't believe it, even when the cameraman got up and walked over to him, still rolling, to get a close-up of his expression as Mr. Schwartz told him that inside that cardboard box was a motion picture camera. Gasp.

Psst! — Hand me a Chicken Leg.

The cruise to Bermuda took four days. If the Candid Camera team were discovered by a passenger, the news would spread fast and they would be unable to work for the rest of the time at sea. Several bizarre situations

had to be set up and shot without their victims knowing what had been going on until the last day of the trip. The film crew ate in the passengers' dining room; the actors had to skulk inside the cabins all the time—except when they were impersonating soup-spilling stewards or starving stowaways. Hidden inside one of the lifeboats, the "stowaway" would lift its canvas cover a few inches and ask a passing passenger to bring him a chicken leg from the buffet table.

Suspicious Suitcases Prohibited.

To get to each new setup, the film crew carried their equipment casually through the passageways inside small suitcases—big cases would look too sus-

ious. For this, they needed a camera about the size and shape of a briefcase — and luckily they had one. The NPR. At the setup, a place where there was room to shoot they couldn't use, because a passenger might wander anywhere where they wouldn't be discovered was too small to fit in — so they used that.

The great Film Runout Problem.

No room for 1200 foot loads there. No AC power, usually. No tripod, even, half the time. Certainly no blimp. But if ever there was a show that needed 1200 foot loads, it was Candid Camera. The classic problems of shooting un-rehearsed action, plus the necessity for total secrecy. The program's shooting ratio averaged

around a *hundred to one!* And the best action very often happened precisely at film runout, of course. Gasp.

I said Sync, Madam — not Sink.

But Mr. Schwartz reports that the two-man crews got to the point where they could change the NPR's magazine literally in three seconds. They left the tape recorder running; and the NPR's built-in clapper automatically re-established sync. With earlier cameras, they had used a system of warning lights to let the interviewer know that he should stall the action while the crew changed magazines. But with the NPR, all that was found to be unnecessary. The NPR, in fact, turned out to be the ideal Candid Camera camera.

We have a brochure on the NPR that we'd like to send to you. Just let us know your address. Ours is Eclair Corporation of America, 7262 Melrose Avenue, Los Angeles Calif. 90046. Call (213) 933-7182

open house...

continued

Various symbols of advertising, including bus benches with ad messages and point-of-purchase cards, were standing about the floor. On one bench sat a mannequin, staring blankly into space. In a corner were three pinball-like amusement games which the guests played well into the evening. Another corner contained prepared food and drink. The odor of Asiatic incense pervaded throughout.

This combination of sensory stimuli: visual, olfactory, and audial, gave an intense feeling of excitement and energy. The participation provided by games, food and drink, and the graffiti panels, gave direction to this energy. The overall effect was one of intimate involvement, and a knowing sense of creative stimuli so important to successful communication and advertising.

And the guests in attendance also were left with a greater understanding of Davis & Associates Advertising.

As the evening moved on, the projectors were constantly rearranged, sometimes show-

ing images at extreme angles across the screens, sometimes projected on the crowd itself. At a predetermined signal, the agency personnel started tearing the giant billboard segments from the windows and walls; the guests, of course, joining in. This created a catharsis of activity allowing everyone to expel the pent-up energy caused by the extreme, four-hour stimuli bombardment, with the resultant satisfaction of having completed the vent.

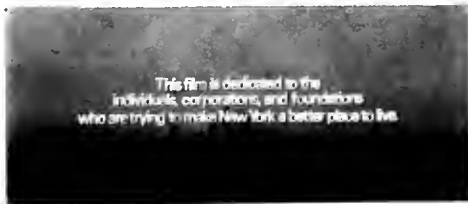

Response to the experimental, mixed-media open house was slightly less than sensational. Many persons have requested encores. All have expressed their delight.

Communication operates on many levels. Davis & Associates tried to utilize as many as possible for the highest possible impact in opening their new offices. Mixed-media makes possible the successful culmination of this, and opens up broad new vistas for the American open house to follow.

Included with invitations was this poster announcing the agency's move.

A Positive Approach

"I really love my garden more than I ever worked in my life -- I never worked ten hours in my life before, now I've worked twenty hours a day -- a lot of days."

"This is a very important thing, the way that really lives, that's why, because the animals they really, that they are loved and they get into it."

Opening scenes and narration from sequences of "The Proud New Yorkers."

CONSOLIDATED EDISON Company of New York is showing a new and "different" film about its own bailiwick this fall to audiences in theatres, on television and in group showings throughout the New York metropolitan area. Association Films is the distributor.

The Proud New Yorkers, 22 minutes in length, color, and photographed in Techniscope, focuses attention on the deeds of many individuals, organizations and corporations who are doing positive things to make New York City a better place to work and live. It does not sweep problems under the rug. But rather than putting emphasis on the problems, its emphasis is on positive contributions to solving some of the problems.

Among highlights of the film are sequences on the Bedford-Stuyvesant Restoration Corporation, a Chinatown Sweep-Up, Rock Park Conversation Center, the Salute to the Seasons Fund, the South Street Seaport, Con Edison and IBM training programs, the P.O.N.Y. program in the Village and Mrs. Roberts' Miracle Gardens in Harlem.

There is no narrator and no

Chatting at the preview of "The Proud New Yorkers" is John Peckham (left), Russell W. Holt from Consolidated Edison, and Robert Finehout, vice president of Association Films, Inc.

formal script. Rather, the producer, Peckham Productions, New York, has been able to put the film together with the voices of the people involved. Nobody could have written Mrs. Roberts' line, "The kids are going to catch on . . . if they don't catch on to something good, they're going to catch on to something else . . . they're going to catch on."

Con Edison believes there is a desperate need for hope and optimism in New York, and thinks the film may help in that direction.

The *Transplantors*, besides being a very good film on heart transplantation (Gold Camera Award, U.S. Industrial Film Festival), represents a part of a rather successful medical marketing package produced by Medical Communications, Inc. (Medcom).

For years in the competitive pharmaceutical market trying to reach doctors and professional medical and health people has been a foreboding challenge where a film, an ad, a salesman, or a brochure alone were never enough, it seemed, to successfully sell.

Medcom evolved a multi-media marketing package that combines film with comprehensive contemporary print and self-testing materials to be used by health pro-

fessionals. It fills the need for information presented in an undisguised educational format and delivers information in a format that can be seen and used, to help sell the product.

Many of the ideas used in Medcom presentations were suggested by the company's founders, a group of activist doctors teaching at Harvard Medical School who realized that there was a need to use sophisticated communications techniques to give health information to practicing physicians, hospital staffs, allied health professionals, and the general public. Two hundred physicians from throughout the country provide a source of up-to-date medical information.

Enter *The Transplantors* as a case in point. Johnson & Johnson, a company dealing with both the medical world and the general public, was able to present a significant service to both groups through a total package about transplantation. Medcom was able to provide an up-to-date film on the subject in a high interest time period. The doctors at Medcom were also able to present practically every leading physician involved in transplantation (Dr. Christiaan Barnard, Dr. John Merrill, Dr. Paul Dudley White, Dr. Denton Cooley, Dr. Adrian Kantrowitz among the many)

on film to probe their thoughts on the subject. The film was dynamic in approach.

A comprehensive monograph (that looks more like TIME magazine than a textbook) presents more in-depth data about the medical problem, and other practical, clinically relevant facts. The monograph's job: to tell the full story, so a doctor is prepared with the latest and best information. The third part of this learning system is self-evaluation materials with which a physician can test his knowledge.

The total result is still being added up. Thus far approximately 900,000 people from the health field have been exposed to the funding company by viewing the film. Commercial TV stations have also shown the film to a few million viewers in the

general public. Medical schools are now using the monographs as the up to date text on the subject of transplant.

The *Story of A Hormone* is another example. A major pharmaceutical company had a not untypical marketing job. It related to a not-too-new product that had been advertised, promoted, and direct mailed to the medical market for several years, but had barely scraped the surface of its potential. Doctors lacked information about the product, did not fully understand its benefits, and all-too-often, therefore, did not utilize the drug.

A major color documentary film that involves many of the leading physicians in this field of medicine was produced. It's job: to present, in a highly ethical fashion, the newest information about this field of medicine, and to stimulate interest by physicians. This was accompanied by a monograph and self-testing device. In the process, a physician uses no more than a couple of hours to get comprehensive information about the hormone and its treatment. And the pharmaceutical company had delivered its message — its total message — to the target market.

These examples do not stand alone. What's important is that other packages

involving major, contemporary medical documentary films have been, are being, and can be produced for numerous other companies. It's another opportunity for the film maker. And for sponsor companies, it's a real versatile sales and marketing tool.

The medical and health industries are not the only place this concept can be put to work. It can apply equally well in many other areas. Dartnell Corporation, for example, uses a similar concept in many of its outstanding sales training films. *The Professional* (see article in this issue) nicely combines the film and related print and giveaway materials.

To make sense, several ingredients are required. One, the target audience (the

buying influences) must have a need for the information — outside those of the traditional advertising and sales promotion channels. Two, the product around which the system will be developed must fit into the contemporary posture of that market. (If it's a once-great product whose time has passed, forget it; an interesting film cannot re-create the product's lost youth or usefulness.) Three, it should be a reasonably new or complex product or serve a complex need in the market.

One, two, three adds up to a demand for attention (which the film generates), detailed and comprehensive data (which the monograph delivers), and a practical understanding of the product (which the self-testing material assures).

Almost always, when these criteria exist, the opportunity exists for a total package built around a major documentary film. It's a marketing tool that can and does generate large audiences on the one hand . . . and that can be used by a sales force for rifle-shot sales work with individual prospects. It's a marketing tool that is informative and educational when education is what's needed and wanted by the audience.

It's a marketing tool that works. And good film is at the heart of it. •

Conference room is shown at left with main studio arrangement illustrated in photo at right.

AT&T's A-V Center: Videotape in Action

A NEW Audio-Visual Center, incorporating the latest and most sophisticated industrial videotape production facilities, is now in operation at American Telephone & Telegraph Company headquarters in New York.

An activity of the Film and CCTV Division of the company's Information Department, the A-V Center was first organized on an experimental basis in July, 1968 and began full-scale programming in February of this year. While AT&T has been in the forefront of industrial audio-visual activities for more than 50 years all the mechanics of production have usually been delegated to outside, independent producer contractors working under Film Division supervision. But now, recognizing the increasing importance of videotape in industrial communications and the immediacy with which programs may be planned and produced, the company has set up a small production staff and is currently serving a broad range of headquarters building management.

One reason AT&T has initiated its videotape program is to complement the activities of the ten Bell System companies now with VTR studio facilities, and also to provide a nucleus of information for all 13 other companies, many of whom are contemplating videotape use in the near future.

The way it looks to A.T.&T. audio-visual management at this stage of the game, videotape programming will eventually find its most active use in training, but as of now it is most frequently used in management dissemination and employee information.

Since February, almost all departments of the company have used the center in one way or another. Noted on the activity sched-

ule for one week in August were videotape program origination or playback for Treasury, Maintenance and Engineering, Marketing and Rate Plans, Information, Traffic and Long Lines. All 23 Bell System companies have sent representatives to orientation and training sessions held at the center during recent months.

When AT&T first contemplated a videotape set-up in the summer of 1968 it was recognized that one of the principal problems in any system was compatibility. Videotape recorded on one system can not be played back on another. Because the Ampex one-inch system was in use at other Bell System companies, it seemed logical to continue on with the same system at AT&T's center. Two Ampex VR-7800 VTR's are thus the key to the whole operation. One is used for regular constant taping activity while the other is a back-up. Both are used for editing, which in today's one-inch taping technology is now quick and efficient. Other equipment in use at the center are four GPL cameras, Ampex 400 audio recorders, Gates-Diplomat audio mixers, a TelePrompTer, and a complete Colortran lighting system.

While color taping is not contemplated in the near future, a great deal of the auxiliary equipment in use — lights and assorted electronic hardware — is either immediately ready for color or can be quickly converted.

The Audio-Visual Center is comprised of one main studio 20 by 34 feet, a 19 by 20 foot control room, a small auxiliary studio, conference room, reception area and four offices for staff.

In addition to the fixed studio facilities, a mobile unit consisting of a VTR, small

Approaching its first full year in operation, AT&T's A-V Center in New York complements VTR activities of ten Bell System companies and serves as a nucleus of information for all 13 other companies.

industrial camera, mini-lighting set-up, microphone and monitor can be wheeled to any location in the headquarters or near-by buildings on a cleverly improvised "tea-wagon." This has proved invaluable in taping personnel in their own environment for enhanced naturalness. It also permits instant replay, and approval, by the executives involved, in their own offices.

AT&T's audio-visual staff was fortunate enough to find space for the Center available in a connecting building at the 195 Broadway headquarters. The new Center has 11-foot ceilings and is "reasonably" well-equipped for air-conditioning and good acoustics. Ideally, Film and CCTV Production Supervisor James L. Paul recognizes, a production studio should be built as a box-within-a-box for complete soundproofing, and air conditioning compressors and blowers should be considerably remote from the studio. Neither of these considerations were possible at the new Center, but by good design within existing limitations, and by proper production methods, their lack has not been seriously felt.

Videotape programs produced at AT&T headquarters are now being used in the ten Bell System companies which have videotape facilities operating. They are also used by six other companies which have experimental "starter-sets" and mini-studios. For the seven companies which are not yet equipped with any VTR facilities, programs are converted to kinescopes. All seven of the VTR-less companies are now considering proposals to incorporate videotape into their training and information-dissemination activities.

One important part of the Audio-Visual Center's technical facilities is an audio retrieval system which permits directions from anywhere in the system to request and automatically locate audio information stored on tape at the center.

Willis H. Pratt, Jr., Film and CCTV Director of AT&T, told BUSINESS SCREEN recently that "videotaping and the use of closed-circuit television is one of the most significant breakthroughs in internal communications that we have experienced in many years.

"But, generally," Pratt went on, "business and industry have not moved into the new field of internal communications as quickly as they could have. Whenever any new media comes along there is a long period of development in which standards are not available. We consider it most important that all manufacturers get together and adopt standards. Until then, business will go slowly, always worrying about compatibility.

"Prices of VTR and CCTV equipment are now coming down to attractive levels," Pratt said, "and if the compatibility problem can be solved industry should make great strides in the near future.

"For the audiovisual specialist," Pratt concluded, "videotape holds forth all kinds of challenge for the future. It is one of the most exciting eras we have had."

Complete control panel is shown above. At right, Supervising Engineer Harry Kaemmerer threads one of the Center's Ampex 7800 VTR's. During a videotaping session (below), Production Supervisor Jim Paul signals Kaemmerer.

This is the layout of the AT&T AV Center in New York.

Super 8 to Surpass All Formats

“WE HAVE a pretty good idea that some day super 8 is going to become the biggest end of the motion picture business,” said Dr. Norwood L. Simmons, assistant vice president and general manager of Eastman Kodak Company’s Motion Picture and Education Markets Division.

Presenting the keynote address of an SMPTE seminar on the future of the super 8 film format, Simmons said, “Educators find that the film can help solve problems, such as reading inadequacies. Business men find that film is an important tool in methods study and analysis. It brings the outside world into the classroom or office. It can motivate and excite. It can sound the call to action. Film likewise lends itself to being used creatively. Special effects are often the only way of depicting the impossible or even the improbable.”

According to Simmons, the mass sale of super 8 prints, however, awaits the time when the public has equipped itself with foolproof, inexpensive devices for displaying super 8 sound motion pictures. “Whether these will be conventional-type sound projectors or living room color TV sets remains to be seen,” he said. “It is hoped that they will be both.”

The first step in getting super 8 sound film adopted will take place in what is known as the audiovisual field, Simmons predicted. The choice of an audiovisual communication medium will favor the system providing maximum flexibility to reach all kinds of audiences, at work in school or plant, at home.

Paraphrasing Dr. Louis Forsdale’s book, *8mm Sound Film and Education*, Simmons said, “As long as the motion picture

was dependent on the 35mm or 16mm formats, it was only economically justified as a medium for reaching audiences in large or medium-sized groups. Now super 8 promises to change all that. Once sound could be added successfully to 8mm film, the motion picture — for the first time — could also be considered as a medium for reaching the individual viewer or student.

“That is why it was imperative that the best engineering and marketing brains in the photographic and motion picture industry tried to come up with an improved 8mm format . . . before the public should become committed to too great an investment in an obsolescent format for 8mm sound. That is why super 8 was evolved. That is why we, at my own company, after more millions of investment and more years of effort than you may quite realize, are betting our chips on the super 8 format,” he declared.

Discussing the potential of the format, Simmons said that in 1968 the U.S. processing of professional 8mm release prints rose to 21 million linear feet — representing an annual increase of 300 percent.

“In terms of being willing to use a miniaturized film system, there are indications that an ever-growing segment of the public is already predisposed to treat super 8 as a professional format,” he said. “Indeed, the public is ahead of us manufacturers of film and equipment in discovering wholly new uses of what I like to call ‘serious 8’.

“It’s not surprising, therefore, to read that the Defense Department has ordered 20 prints in 8mm size of the 25-minute documentary color film, *Why Man Creates*, from its sponsor, Kaiser

Aluminum & Chemical Corporation, or to hear that IBM is using more than 700 of the new type of super 8 combination movie-filmstrip projectors to carry its latest electric typewriter repair and service training program to its field force of service men. Nor is it surprising to see that the National Broadcasting Company saw fit to preempt one hour of prime network airtime to carry a Bill Cosby special program that featured super 8 movies shot by children only six to nine years old. In this case the original super 8 footage was run right through the network’s telecine chain, and the results, I must confess, were often of surprisingly good photographic quality.

“There’s no question about it,

27 Receive Fellowships

The Board of Governors of the Society of Motion Picture and Television Engineers, upon the recommendation of the Fellow Membership Award Committee, under the chairmanship of G. Carleton Hunt, DeLuxe Laboratories, Inc., has conferred the distinguished grade of Fellow Member upon twenty-seven individuals.

The Fellow Awards were presented by SMPTE President Deane R. White at special ceremonies on Monday, September 29, beginning the Society’s 106th Technical Conference and Equipment Exhibit at the Century Plaza Hotel, Los Angeles, California.

A Fellow of the Society is one who is no less than 30 years of age and who has, by his proficiency and contributions, attained an outstanding rank among engineers or executives of the motion picture, television or related industries. Those upon whom this honor has been conferred are:

Roy D. Cahoon, vice president, engineering, Canadian Broadcasting Corp.; Leonard F. Coleman, district sales manager, Eastman Kodak Co.; Robert G. Crane, vice president, Movielab, Inc.; Raymond H. DeMoulin, supervisor, special projects section Photographic Technology Division, Eastman Kodak Co.; Harold J. Eady, vice president and general manager, Bonded Film Services (Canada) Ltd.; Raymond L. Estes, photographic testing engineer, Film Testing Division, Eastman Kodak Co.; Adrian B. Ettlinger, staff consultant, CBS Television Network;

the super 8 format is here to stay,” he concluded. “There will be changes and improvements but the exciting thing is that we in motion pictures and television have in super 8 a master key to unlock for our industries a rewarding and exciting new frontier in visual and auditory communication.”

The two-day Super 8 symposium represented the first time in conference history that two days had been devoted to the study of problems of a specific topic.

The Super 8 symposium was highlighted by a luncheon address by Sen. George Murphy, who helped develop the field. He spoke on “The Future of Motion Pictures and Super 8 in National and International Affairs.”

Harold J. Freedman, assistant to the president, DeLuxe Laboratories, Inc.; Robert O. Gale, director product planning, Motion Picture and Education Division, Eastman Kodak Co.; William E. Glenn, general manager, Applied Physics Department, CBS Laboratories; Everett C. Hall, president, Everett Hall & Associates

Denis H. G. Howe, plant superintendent, Technicolor Film Service; Joseph D. Kelly, vice president, operations, Glenn Glenn Sound Co.; William A. Koch, sales manager, SW, Motion Picture and Education Markets Division, Eastman Kodak Co.; Arch C. Luther, manager, videotape engineering, RCA Corp.; J. M. McDonough, product specialist, Motion Picture and Education Markets Division, Eastman Kodak Co.; Sheldon Nemeyer, manager newsfilm equipment, Laboratory and Sound Services, NBC; John Newell, president, Western Cine Service; Kemp R. Niver, Renovar Co.

and Locare Research Group; Frank H. Riffle, president, Carbons, Inc.; Irving S. Rosner, president, Rosner Television Systems, Inc.; Dudley Spruill, vice president and general manager, Byron Motion Pictures; H. Lero Vanderford (retired) Film Production Manager, AT&T; Robert A. Von Behren, technical director, Mincom Div., 3M Company; Leslie J. Wheeler, manager, Motion Picture and Television Division, Ilford Ltd.; James L. Wilson, vice president-engineering, NBC; and E. Carlton Winckler, director Design and Shop Services, CBS.

Take the 5-second “instant expert” test

New RCA Super 1600 Automatic. It threads itself.

Five seconds—that's all it takes. Flick on the switch—the Super 1600 16mm sound projector does the rest. You're an “instant expert” because *it threads itself*. In just five seconds! Thanks to RCA's exclusive “Safe-Threader”, movies are easier to present than ever before!

But there are many reasons for buying the Super 1600. Economy, for example. Unlike other automatic threaders, the RCA “Safe-Threader” never touches the film. So it never causes wear.

Convenience, for example. Set-up

takes all of one hand. Flip-up reel arms, a smooth tilt mechanism for quick picture alignment, and a precision rack and pinion focus control, get your picture on the screen in a hurry.

Ease of operation is another reason. Fewer and easier operating controls virtually eliminate the age-old headache of fumbling around to get the show started. If you want to reverse the film—just throw a switch. It's that simple.

Naturally, the sound from the Super 1600 matches its brilliant

pictures. The new 15-watt all transistor amplifier and built-in speaker brings you sound as close to life as you can get.

Call your local RCA Audio-Visual Distributor. Ask for a demonstration. Then run it yourself. You'll feel like an expert—*instantly*. For instructive brochures, write: RCA Instructional Electronic Systems, Bldg. 15-5, Camden, N. J. 08102

RCA

By Ott Coelln

IAVA Calls for Awareness Now

As peace marchers milled in the streets outside, members of the Industrial Audio Visual Association meeting in Philadelphia pursued an inspiring program of corporate awareness to current social ills at their Fall Meeting.

PROFESSIONAL MANAGERS of corporate audiovisual activities from Eastern and Midwestern states were in Philadelphia last month (October 14-17) for the annual fall meeting of their Industrial Audio-Visual Association. The Marriott Motel sessions subordinated this group's usual emphasis on sight/sound technology and techniques to share a very timely and topical meeting theme: "To Be Aware!" Program chairman Alan Yost (Bethlehem Steel) and president William W. Walton (I.B.M.) hosted the three-day agenda.

Keynote speaker Thacher Longstreth, executive vice-president of the Greater Philadelphia Chamber of Commerce, brought keen awareness of today's urban crises affecting the business community as he discussed "Doing Business in Our Society." Coming to the podium immediately after the highly-charged multi-screen visualization of *Problems of Our Times* (sponsored by Ohio Bell and introduced by Lee Coyle), Longstreth was visibly shaken by his unsparing review of social upheaval.

"It's hard to follow that act," he agreed, "and it helps to show us the important role which your audiovisual media can play in explaining our manifold social and economic problems."

Another opening day speaker was Dr. Rod Napier, Temple University educational psychologist, who turned these A-V specialists into a laboratory for personal involvement in "techniques for selective perception" as various means for better employment of the communication process were demonstrated. His subject was closely related to the topic of the next speaker, "Alcoholism and Drug Addiction in Industry" which was reviewed by Dr. Donald Ottenberg of the Eagleville (Pa.) Rehabilitation Center. Members of the Eagleville staff, all former addicts, helped to lead group discussions of these problems.

The aspirations, achievements and the frustrations of Black Americans in the business world were extremely well covered by three speakers during the entire Thursday, October 16 morning session. Obie McKenzie, of the College Placement Service, Inc.

clarified the most effective approaches for "Communicating With the Black College Graduate." He was followed to the rostrum by Claude L. Foulkes, manager of special communications programs for IBM. Case history films of actual experiences of Negro workers and job applicants, used in seminars with IBM managers, have been extremely effective in overcoming latent prejudice and in improving mutual inter-racial understanding. Listening to Foulkes, you soon realize that our black brethren understand their dilemma and the long, hard road to real brotherhood far better than most personnel experts.

Proof that capable and motivated black Americans can succeed in business was the presence and presentation at Philadelphia of Benjamin Sallard, general manager of Progress Aerospace Enterprises. Born of an alliance between concerned black Baptists and General Electric's Missile & Space Division, PAE is succeeding in a highly-competitive complex field, though principally staffed, owned and operated by Negroes. It has trained dozens of "hard core" young people and has become an example of what can be achieved in opening new roads for economic and social progress for black Americans.

Dr. Ernest Rose, chairman of the School of Communications and Theater at Temple University, brought a group of advanced young film makers to the Marriott as he discussed "Film and the Now Generation." Some latent hostility toward the "industrial film" as a career was soon evident, apparently related to "youth's suspicions of business" and what they believe to be a lack of creative opportunity in this film area. But the technical shortcomings of one film shown the IAVA audience, largely footage of recent student protest demonstrations, also showed a lack of real preparation for any kind of serious film career. But the presence of a "generation gap" was very evident in comments from the podium and the floor.

Some "bridge-building" for the development of talented young film makers who may seek careers in industry was described

by Ronald Sutton, manager of the Educational Department of the American Film Institute. This relatively new non-profit organization has several active programs which encourage new talents through awards and scholarships. Merle Steir, who has worked extensively in the field of "youth concepts" talked on "Seven Old Rules for Youth" during this phase of the IAVA program.

"Audio Visuals in Sweden" brought focus on international aspects of sight/sound media when Sven Hallonsten, managing director of the Visual Aids Section, Swedish Council for Personnel Administration, described the wide use of effective films by that country's employers and labor organizations. An old friend of BUSINESS SCREEN (whose program has been described in these pages) Mr. Hallonsten is touring the U.S. in search for relevant films to enlarge his country's A-V library.

Andrew G. Freeman, executive director of the Philadelphia Urban League, was the honored guest speaker at IAVA's fall banquet session. He gave illuminating points on "Equal Employment Opportunities and the Race Relations Gap."

The final day's morning program was highlighted by two speakers from Sears Roebuck & Company, introduced by IAVA's publicity chairman, William T. Dikeman of that firm. Kathy Price, assistant director of Radio and Television Advertising at Sears, talked on "Women in Audio Visuals" and George Hatzfeld discussed "On Your Own Initiative" as a challenge to A-V executives. Leslie Buckland's summary of "The Role of the Industrial Communicator" wound up a highly informative fall program.

Evidence that IAVA is constantly recharging its membership roster and expanding its influence among A-V specialists in industry came during organization business sessions where members heard and saw the "introductory" presentations given by nine new members. From Minneapolis they met Paul A. Anderson, Communications Center Manager, Northwestern Bell Telephone Co. and Wayne E. Peterson, supervisor of General Mills' Audio-Visual Dept. A new Cleveland member is Paul H. Chaddock, manager of Education Systems at Addressograph Multigraph Corp. Toledo sent Richard J. Grafton, general sales promotion manager at Lobby-Owens-Ford Company. New members from the metropolitan New York area are Gordon M. Rhodes, manager of education at the First National City Bank and Leonard Gumley, Manager of Audio Visuals at Hoffmann-LaRoche, Inc. (Nutley, N.J.). Harvey Plants, a former member returned to the fold as Communications and Training Manager for the Birds-Eye Division, General Foods Corp. at White Plains, N.Y. Harry Knipp, supervisor of motion pictures for the International Harvesting Company, at Sheridan, Ill. joined Kurt F. Ross, general supervisor of planning visual services at U. S. Steel Corp. in Pittsburgh and both firms renewed activity in IAVA.

Location Lighting Kits Lightweight but Versatile

Hervic Corporation has available a line of tungsten-halogen location lighting kits designed to be as lightweight and compact as possible and yet versatile enough to fulfill the majority of location photographic lighting requirements. Each of five lighting kits, complete with a wide range of accessories, fits into a single carrying case.

The Hervi-Quartz Senior 1000 watt and 650 watt and Junior 650 watt fixtures are provided with a rugged housing design which features flo-thru convec-

Hervi-Quartz Senior 100 watt light (SR/1000) features removable barn-door.

tion cooling. The Hervi-Quartz SR/1000 and SR/650 also feature removable barn-doors. The JR/650 fixtures are supplied with integral four-way barn-doors.

More information may be had by writing *Cinema Beaulieu, Dept. BSC, 14225 Ventura Boulevard, Sherman Oaks, California 91403.*

Film Defect Detector Is Adjustment Free

A high-speed, 16mm film defect detector makes unnecessary the frequent checks on performance and precise readjustment usually needed. All Paulmar film inspection machines are now being equipped with the "Micro-Detector," and all Paulmar machines manufactured

since approximately 1964 can be fitted with the new detector with only slight modification.

Film inspection speeds through the detector can be increased up to 50% beyond those recommended for present defect detectors. For more information, write *Paulmar, Inc., Dept. BSC, 464 Central Ave., Northfield, Ill. 60093.*

Film System Makes Bolex Magnetic Sound Camera

The Vanderlelie Film System, making the 16mm Paillard Bolex a single-system magnetic sound camera, again is available after extensive improvement. A new Boly-Sound unit, Boly-Drive, and important changes in the camera segment increase accuracy and versatility of the system.

The film guidance system within the camera has been altered to lessen pressure and reduce wear on the magnetic recorder playback, a dual-purpose head. A new spring roller dampens vibrations from the head. Heads are factory pre-tested and can be adjusted for maximum performance. New universal connector is a metal mini-plug, built to last for the life of the camera.

Boly-Sound is an all-new amplifier replacing the recorder formerly used for this purpose. Its mike input is 50 to 250 ohms. Line input is 600 ohms, unbalanced. The line output can be used for monitoring, with a frequency response of 150 to 15,000 hz. Battery-tester, vu-meter, volume control, switch for playback or recorder, and built-in speaker are supplied. Total weight of the amplifier is under

Boly-Drive assures synchronization of picture and sound.

3 pounds, and it measures only 5" x 4" x 7". Boly-Sound is powered by any ordinary 9-volt battery.

The new Boly-Drive, which may be added, is a 12-volt single-speed governed control electric motor installed in the camera to replace the spring-wind mechanism. This operates the camera at a constant 24 f.p.s., $\pm 1\%$, and assures synchronization of picture and sound. Quiet and smooth-running, Boly-Drive actually lightens the camera, and permits installation and use of 200' or 400' magazines. Power is supplied by belt or shoulder-carry battery. Conversion to Boly-Drive requires about three weeks in the Vanderlelie Film Systems engineering facility.

Further details of this inexpensive, high-quality system may be obtained from *Roy Vanderlelie, Dept. BSC, P. O. Box 8092, Universal City, California 91604.*

Audio Cassette 20 Adds New Dimension in Sound

The Audio Cassette 20 is a portable sound amplifier and speaker system which may be purchased with or without the tape recorder. It features a 20-watt peak power transistorized

Kodak presents a fully automatic cartridge-loading projector that makes it a snap to show movies.

"Snap"

Kodak's done it for you—snap-on movies with the new cartridge-loading Kodak Ektagraphic 120 Movie Projector. Just snap on the new Kodak super 8 cartridge, and the show's on.

With the Ektagraphic 120 Projector, there's now a low-cost, portable, easy-to-use display system that makes it a snap for anyone to show films. Mean anything to you and your business? Like the fact that now your films are more usable by more people in more places? And the fact that now's the time to consider reducing more of your 16mm films to super 8 for even wider distribution? Think about it.

The Ektagraphic 120 Projector is rugged—completely dependable. You can instantly repeat any part of the film

by just pressing a button. You can also project any frame as a still picture. At the end, the film automatically rewinds back into the cartridge—ready to show again, right from the start.

And the unique new Kodak cartridge? It's also a snap to load or unload with standard super 8 reels in 50- or 100-foot lengths. Just snap it open. Drop in the film reel. Snap the cartridge closed, and it's ready for showing. To edit or clean the film, simply snap open the cartridge.

A Kodak Audiovisual Dealer will be glad to show you how the new Kodak Ektagraphic 120 Movie Projector can become a convenience tool in your film operation. See him, or contact the nearest office listed below.

Pre-Conference Observations

By the time you read this it will be all over! The ballots are all counted, the new officers announced, the Cindy Awards made, and the Conference in San Francisco all wrapped up.

But as of this writing, the conference is still three days away. Because Lon Gregory, Editor of BUSINESS SCREEN will be an official observer, as well as an attending member, we will not mention the conference program, the turn out, or the awards. We'll let him give you a full report next month. So we'll just report on a few things we *do* know: The election results, some new chapter officers, membership west contest results, rules and regulations revisions, and the creation of a new Vice Presidency on the Board of Directors.

The results of the 1970 National Elections are in and here are your new officers and a statement from each.

President Robert B. Montague: "Everyone wins in an IFPA Election. The candidates all become a part of the management and the membership given the promise of new ideas, enthusiasm, and lots of hard productive work."

Executive Vice President Michael Rye: "I've had the opportunity to be a part of a great group of people who sparked this revitalization to its present pact. This momentum must be continued if IFPA is to take its rightful place as the national leader in the audio-visual field."

Financial Vice President Jack Meakin: "IFPA must continually look to expansion and progress. We made great strides in this direction during the past year, but we've got to keep going and do even better."

Editorial Vice President Chuck MacCrone: "Make IFPA a little bit bigger, a little bit better organized, and a whole lot more desirable."

Chapters-Membership Vice President West Ray Hollingsworth: "This office is a challenge to any man. It requires knowledge of the IFPA, its membership, philosophies, aims and eventual goals. I pledge myself to those duties necessary to continue in the fine pattern set by my predecessors."

Chapters-Membership Vice President East Art Rescher: "We need to broaden the scope of chapter activities through greater representation of member affiliations, to obtain new members in diversified categories and,

thus further the communication exchange and the level of interest in our chapter meetings."

New Office Created

At the business meeting held during the conference, Vice President Bob Montague will introduce the motion to create a new post by appointment, that of Public Relations Vice President, and that it be filled by *William J. Nash:* "A vigorous, dynamic and imaginative public relations and information program is necessary for the growth of our organization. I will direct and implement a plan of action which will accomplish these goals."

Revised By-Laws Submitted

Board members were presented with the newly revised "Rules and Regulations" for examination, consideration and amendments. As promised, they will be presented to the general membership at the San Francisco Conference for ratification.

Next major order of business for the present Board of Directors and the newly elected officers in joint session will be to draft the new operating procedures for International and Local Chapters.

Western Contest Results

The first Western IFPA membership contest drive has been tallied and here are the winners:

First Place: George Kent of Los Angeles

Second Place: Jack Meakin also of Los Angeles.

Third Place: A five way tie. However, Mitch Rose and Bob Montague have voluntarily disqualified themselves which leaves three.

Richard Cameron of Seattle.

Tom Emmett of Los Angeles.

Ira Thatcher of San Francisco.

Congratulations to the above and to the dozens of others who got one or two new members and earned a gold IFPA Lapel pin.

Three New Sustainers

Berkey-Colortran, Jack Pill and Associates, and J&R Film Service were recently welcomed to the growing roster of IFPA

stainer member companies. In the words of Mitch Rose, National President: ". . . the support and involvement of these fine companies toward IFPA goals is most appreciated and will further assist IFPA in becoming the leading professional organization in the audio-visual/information film industry."

Seattle Chapter Installed

On September 28 the Seattle petitioners were presented their Chapter Charter at the organization meeting held in KOMO-TV's Studio "G".

Dick Cameron, Acting Chairman, conducted the meeting which was attended by over 60 film makers from the Northwest. Jackie Stillwell, IFPA Recording Secretary, made the trip as a representative of the National Office. She read a letter of installation from President Mitchell Rose and a letter of welcome from Chapters Vice President Bob Montague.

Chuck Hamilton, Acting Membership Chairman, extended the meeting invitation to all film makers of the area, as well as the charter members of the new chapter, and a question and answer session was held for those wanting more information about IFPA objectives, benefits and services.

Program for the evening continued with the screening of a modern, upbeat all-music Public Relations film not yet seen in the area, followed by an announcement and discussion of new motion picture film stocks by Ed Blasko of Eastman Kodak.

Member Picnic in LA

In keeping with a tradition to have at least one meeting a year a family affair, the Los Angeles Chapter officers, headed by Chairman, Mike Rye, recently treated it's members to a Mexican Fiesta picnic. Arranged and coordinated by Program Chairman Jack Meakin the scene was set in Mexican motif and featured a catered Mexican style dinner. Sombreros, posters, music and good food combined to give members, wives and children a most pleasant remembrance. It's make the picnic TAKE-3 next year Jack!

Not to be outdone by his own outstanding track record as program chairman, Jack Meakin did it again! The September Los Angeles meeting featured the latest in creative cinematography. Paul Kenworthy of Kenworthy Snorkel Films put on a most fascinating program and sample film showing Kenworthy's unique development, the Snorkel Camera.

Consisting of a series of tubes, mirrors and prisms suspended from an overhead camera, viewers were able to travel in, around and through a table top dinner setting, through a party in motion, through and around a stack of poker chips and card players hands. Even a bottle of ketchup looks fascinating when it's photographed from table top level, booms up along the table, goes over the top and down inside for

a look! What a creative tool this can be for the information film producer!

In addition, interesting demonstrations of their latest equipments were presented by Berkey/Colortran and Arriflex Camera Corporation.

New Inland Empire Officers

At a recent meeting of the Inland Empire Chapter, new officers for the next year were elected. Those named were:

- Larry Albers — Chairman
- Dan McGovern — Program Chairman
- M. Ray Ussery — Secretary/Treasurer
- Rolland V. Beech — Membership Chairman
- Mack McClintock — Publicity

San Diego Holds Election

No regular meeting was held in October due to the National Conference held in San Francisco. However, the officers and nominating committee were busy creating a slate of new officers for 1970. A special program to be announced for November is promised.

San Diego Chapter, the first "Satellite" Chapter of IFPA will return to the "one year term" this year and, therefore be in phase with other chapters.

And, In the East

Have you ever wondered how it would feel to walk a city street and see no neon signs, billboards or well stocked shop windows, — temptingly arranged to separate you from your money; to be served in restaurants and hotels by waiters and bellboys who would be insulted if you offered a tip? Bruce Herschensohn, IFPA Chapter Chairman and Director of Motion Pictures and Television for USIA, just back from representing the United States at the Moscow Film Festival, told of such cities as he related his recent experiences to those at the September meeting of Washington's IFPA Chapter. He told of the enthusiastic receptions given the U.S. film entries by Russian audiences, especially, *Funny Girl* and *2001, A Space Odyssey*, and their strange treatment by Russian officials.

At one time or another we have all wished for less commercialism in our cities, but Bruce says that its absence has an oddly depressing effect. So much so that when he returned to the cities of the West, he felt exhilarated as though arriving at a most swinging festival. Also, the indifferent service at restaurants and hotels made one appreciate our mercenary waiters.

The interesting meeting also included the business of selecting officers to serve the Washington Chapter during 1970. Selected were: LCDR S. Sims Howell — Chairman; Arthur Salkin — Vice Chairman; James Thompson — Secretary-Treasurer; Wolfe Dochtermann — Programs; Bob Circosta — Publicity; Jay Brubaker — Membership.

Two Premier Debuts

The Tenth Annual National Conference in San Francisco was the occasion for two World Premiers. IFPA attendees were treated to a special showing of a ninety-minute feature in 35mm Wide Screen Produced by Barry Coe of 20th Century-Fox titled *Footsteps on the Moon*. Key producers of the film dealing with the Apollo Landing Mission were Director Bill Gibson of McDonnell Douglas and Writer Bob Scott of Aerospace Corporation, two pioneer IFPA members. The other debut was that of a new "intimate" sound motion picture projector by Rheem Manufacturing Company. Using a special cassette and either AC or DC power, this hand or stand held projector is the size of an early Brownie camera and features variable speed, freeze frame, and battery recharger. First U.S. showing was the display area for the full three days of the conference.

Frisco Hears Lycett

In his third chapter appearance, Eustace Lycett, head of the special effects department at Walt Disney Productions and member of IFPA, presented his most interesting program to the Northern California Chapters, Lycett, Academy Award winner for "Mary Poppins—Special Effects," sponsored on the special effects he conceived for the film. In addition the sodium screen process and the traveling matte system were discussed and film clips from "Mary Poppins," "The Gnome-Mobile" and "The Love Bug" were shown.

industry news

Technicolor to Supply NAC Cartridges

Technicolor, Inc. has been selected as the sole company by the new federal National Audiovisual Center to supply loaded, optical sound film cartridges for 500 educational film titles the agency has in its catalog.

The first act by NAC, upon being established in August, was to make the teaching films available to the fields of education and industry. Its catalog includes both color and black and white films, all of which will be available for purchase, with some also available to be loaned gratis.

With 1,300 other educational film titles already on hand, the contract with NAC boosts to 600 the number of films, ranging up to 30 minutes in length, now available in Technicolor optical sound cartridges for schools, industry and organizations.

A free copy of the agency's catalog can be obtained by contacting the National Archives and Records Service, General Services Administration, Washington, D.C. 20408.

F&B/Ceco Expands Again in Florida, Names New Men

Gearing up for boom movie business expected in the coming year, F&B/CECO has again expanded their facilities and personnel in the Miami area.

Arthur Florman, president of F&B/CECO Industries reported the following changes. Hy Roth, a 15 year veteran executive from New York is relocating to Florida and will become general manager of the entire F&B/CECO operation in the state. He replaces Norman Zuckerman.

Bill Samerdak, well-known personality from Hialeah is the new assistant manager.

Marty Conklin, also from the New York Headquarters is now located in Ft. Lauderdale and is district sales manager for S.O.S. Photo-Cine-Optics Corp., which is a professional movie equipment sales company — a Division

of F&B/CECO Industries. S.O.S. main headquarters will be moving into a new 40,000 sq. ft. building at 40 Kero Road, Carlstadt, N.J. on or about November 1st.

Further, the building adjacent to F&B/CECO Studios in North Miami at 14995 N.E. 20th Ave. has just been leased from Leonard Finkel Assoc. in a \$160,000.00 deal.

This new building was formerly occupied by Spector Scenic Designers, and was designed as a part of the former Studio City complex. It will house the F&B/CECO Rental Division, the S.O.S. Sales Showroom, and will also accommodate a showroom and manufacturing facility for Bardwell & McAlister, manufacturer of movie lighting and electrical equipment, also a division of F&B/CECO Industries.

Harry Foster remains as Manager of F&B/CECO Studios in North Miami.

Tandberg Radiofabrikk Buys U.S. Distributor

Tandberg Radiofabrikk of Oslo, Norway has purchased Tandberg of America, Inc., its exclusive U.S. distributor.

Kjell Ekornhoel, an engineer

with the firm for 10 years, has been appointed president and chief executive of the American organization. The founder and former president of Tandberg of America, Eric Darmstaedter, will continue to be associated with the new firm as a consultant and advisor.

In other moves, Robert J. Bowman has been named vice president and sales manager and William Ausman heads educational sales.

Eastern Video Expands Service, Adds Equipment

Eastern Video Production Services completed negotiations with Philips Broadcasting Equipment Corporation, for additional equipment for their New York studio facilities increasing the total initial package to \$1.8 million.

Eastern Video will provide color television facilities, equipment rental, services for use in production, video tape recording and editing of television programs and commercials, according to George H. Weber, president.

"The additional equipment, along with our mobile van, will give our customers complete, fast, quality turnkey color tele-

vision facilities in New York City and on location," Weber said.

The New York studio will have the latest equipment for production, post production and distribution of tape services. Equipment will include three new PC-70 cameras, and four Ampex video tape recorders.

The mobile unit is a 40-foot, \$1,100,000 air conditioned studio on wheels. In addition to four working cameras and a hand held PC P-90 camera, the van carries one HS-100 "Slo-Mo" recorder and two Ampex video tape recorders.

Eastern Video's equipment and services will be available to advertising agencies, regional and national network hookups, local stations, independent producers and educational and industrial users.

Executive offices of the new communications firm, are located at 210 East 49th Street, New York.

Papp Film Services, Inc. Opens in New York

Papp Film Services, Inc., has opened at 350 E. 52nd St., in New York City. Formed by Tony Brischler, Papp stands for Production and Post Production Services.

According to Brischler, formerly production and editing supervisor at Elektra Films, the new firm will offer some innovations in post production handling and new concepts of production techniques all aimed at reducing costs without sacrificing creativity.

Julian Films Enters Nontheatrical Field

Julian Films has begun non-theatrical production with the 31 minute film, *Group Psychotherapy: The Dynamics of Change*, for Hoffmann-LaRoche.

Offices and facilities for the new firm have been established at Samuel Goldwyn Studios, 1041 N. Formosa Ave., Los Angeles, Calif. 90046. •

The Naval Air Engineering Center at Philadelphia has installed Berkey-ColorTran quartz lights at its H.G. Catapult Air Crew Equipment Department where it simulates "G" forces on dummies, chimps and humans and records the effects with high speed photography shooting at 1000 fps using Ekta EF film. — Official Photo, U.S. Navy.

Accepts 100 ft. day light spools internally or 200 ft. external magazines.

BACH-AURICON INC. Filmagnetic sound-on-film camera line with sound head for recording on pre-stripped film. Self-blipped units for recording optical sound and picture on film at the same time.

BELL & HOWELL COMPANY. Line of professional cameras including Model 70, 70DR and 70HR. Also photoinstrumentation cameras and related accessories. Eyemo for newsreel work in 35mm.

CANON USA, INC. Canon Scoopic 16 news camera. Zoom lens with focal length from 13mm wide angle to 76mm telephoto.

CINEMA BEAULIEU/HERVIC CORPORATION. The Beaulieu R16 is light and silent, allowing high-speed, impressionistic reporting. The automatic diaphragm control avoids over- and underexposure and gains precious seconds previously wasted in checking light.

ANDRE DEBRIE OF NEW YORK. U.S. Distributors of the CX-16 16mm professional lightweight model with 400 foot magazine.

EASTMAN KODAK CO. Model K-100 Turret camera has full speed range, shoots 16mm roll film. Wide range of lenses.

ECLAIR CORPORATION OF AMERICA. Manufacturers of the Eclair NPR, 16mm silent, pin registered camera for sync sound filming, both single and double system. Also high speed intermittent cameras in 16mm and 35mm.

GENERAL CAMERA CORP. Manufacturer of the SSIII lightweight single-double system sound camera.

INTERCINEMA CORP. Featuring the Doiflex 16 professional camera with reflex viewing. Three lens C mount turret, battery operated motor. Line of Accessories.

MAGNIPHOTO CORPORATION. The Admira 16A1 twin-lens camera features 20mmf:1.8 Openar lens, NiCad battery/Pistol Grip, battery trickle charger and rewind crank for special effects. Weights under 4 pounds.

MITCHELL CAMERA CORP. 16mm and 35mm line. 35mm BNC and NC models with automatic fade, silent operation without blipping. Mark II 35mm reflex for studio, hand-held. Also 16mm studio model and SSR-16, portable reflex with magnetic sound.

PAILLARD, INC. Bolex line of 16mm cameras with through-the-lens-viewing system. Varied features on range of models.

PHOTO-SONICS, INC. Manufacturer of the Acme special effects motion picture equipment and Photo-Sonics high speed instrumentation camera equipment, including cameras of 16mm, 35mm and 70mm film sizes. The variety of cameras available includes rotary prism as well as pin registered cameras.

JACK PILL AND ASSOCIATES. The Cine-Con Camera offers an approach

to the popular conversion of the Auricon Cine-Voice Camera to accept 400' Mitchell magazines. It utilizes a 16 volt D.C. transistorized governor controlled motor. Offers reduction in weight and maintains accurate film speed with quiet operation.

PRODUCTION ACCESSORIES

BREWSTER CORPORATION. Polecat Studio Background and Light Supports spring between floor and any ceiling up to 19 ft. to hold seamless paper rolls, drapes, panels, shelves or battery of lights.

CENTURY PRECISION OPTICS. Manufacture and repair of motion picture and cine equipment. Custom made sound blimps; specialists in modifications and zoom lens repair.

CINEMA BEAULIEU/HERVIC CORPORATION. Distributors of NCE's Hydrofluid Jr. tripod, designed to support motion picture cameras and accessories up to twenty pounds in weight, and featuring an integral leveling-ball.

CHRISTIE ELECTRIC CORPORATION. High current d.c. power supplies and battery chargers for various applications.

CINE 60, INC. Manufacturers of the Cine 60 Powerbelts which feature rechargeable nickel cadmium batteries, completely sealed battery cells, built-in charger, automatic overload switch and are designed for comfort and mobility; blimps.

VICTOR DUNCAN, INC. Lightweight power source to drive Auricon, Arriflex and Eclair cameras. Sales, service, rental, repair of wide line of professional equipment.

HENRY GROSSMAN ASSOCIATES. DC to 110 V-A.C. for driving movie cameras.

FELLER VACUUM FORM STUDIOS, INC. Pre-fabricated scenic backgrounds provide realistic scenery inexpensively. Light-weight and easily put together, each unit is a fully dimensioned and precisely detailed replica, hand painted in true to life colors.

C. M. MARCHIONI. Manufacturers of an elevating center post tripod with all angle tilt head for motion picture and still cameras. Features conveniently manipulated handles and clamping devices; is compact and light weight.

PACIFIC UNIVERSAL PRODUCTS. Vacuum coating of camera lenses including recementing, repolishing; front surface NAD partial mirrors; also camera reflex mirrors.

JACK PILL AND ASSOCIATES. The Kelly Zoom Control Pod, Model JP 1001, is designed to provide a camera support offering complete control of zoom, focus and motor without shifting hand position. A handle extending from beneath the camera platform incorporates a camera power button.

JACK PILL AND ASSOCIATES. The Powernator is an efficient low cost mobile electric power unit. It produces 6000 watts 115 volts 60 cycle A.C. power from auto engine at 3600 RPM. Also available with 40 amp D.C. output. Exact C.P.D. is controlled by frequency meter calibrated from 56 to 64 C.P.S. Regulator prevents overload from changing power draw.

CHARLES ROSS, INC. A fleet of generator trucks maintained for rental.

TERADO CORPORATION. Inverters for the conversion of 12 and 24 volts D.C. to 115 volts 60 Hz A.C. in operation of videotape systems and other

Continued on next page

production equipment . . .

continued

peripheral equipment, away from regular power. Also completely portable power supplies for silent fumeless operation of all types of electrical equipment.

STAREX, INC. Manufacturers of multi-color non-emulsion leader which does not fade or change color and requires no scraping to splice. Available in 35 and 16mm (single or double perforation).

ANIMATION & TITLING EQUIPMENT

BERKEY TECHNICAL OXBERRY PRODUCTS. The Oxberry Filmmaker 16mm Animation stand for making public relations, training sales presentation films to the point in a minimum time. Minimum operator attention required, automatic focus; also has capability of slide/filmstrip 35mm Camera. Also available Master Series Animation Stand for the professional user.

CAESAR-SALTZMAN, Division of BERKEY TECHNICAL. Animation equipment including special effects optical printers.

DURST EHRENREICH PHOTO-OPTICAL INDUSTRIES, INC. Copying and animation stand.

FOROX CORPORATION. Forox coordinated three-axis motor system for controlling compound and zoom movements on animation stand. Each movement has individual speed control with a master control to bring all three up to speed simultaneously.

HOFFMAN CAMERA CORPORATION. Multipurpose Verticam for direct and copy photography, all film formats.

LAFAYETTE INSTRUMENT COMPANY. Manufacturers of a complete line of Time Lapse Photography Equipment used to graphically record acrobatic in a manner that facilitates observation and analysis. A complete line of Time Motion Study Equipment for these purposes is available. Time Lapse Photography Units are available for Bolex, Bell & Howell, Eastman Kodak, Arriflex, and many others.

RAY MERCER & COMPANY. Grid-lined tracing pad (11 x 14") for motion picture and television layouts.

PAILLARD, INC. The Super Titler can be used with many 16mm cameras, including the Bolex H16 and H8, and can be used in either the vertical or horizontal position.

PHOTO-SONICS, INCORPORATED. Photo-Sonics, Inc., is the manufacturer of the ACME animation and titling equipment, which includes animation stands, checking boards, inking boards and related animation products.

PRODUCERS SERVICE COMPANY. Line of Acme Optical printers and special effects optical printers.

RESEARCH PRODUCTS, INC. Optical printer features automatic drive for fades, dissolves. Electronic Programmer can be added to set up skip-frame patterns.

SICKLES, INC. A full line of animation stands and accessories designed for today's high-speed animation film production techniques.

S.O.S. PHOTO-CINE-OPTICS. A complete line of Tel-Animastands for special effects and animation work with 16mm.

VISUAL ELECTRONICS CORPORATION. Manufacturers of TV titling equipment under system names of Readyfile, Masterfile and Titlefile. The titling is performed electronically and can be pre-programmed or spontaneously applied. Titles can be presented by crawling on the screen from right-to-left, rolling from bottom to top or statically. Visual's edging technique borders each character to strengthen its presence regardless of washed out or white background.

LENSES

ALLIED IMPEX CORP. For 16mm, 35mm and TV.

ANGENIEUX CORP. OF AMERICA. For 16mm, 35mm and TV.

ARRIFLEX CORPORATION OF AMERICA. For 16mm and 35mm.

BACH AURICON, INC. For 16mm.

BAUSCH & LOMB, INC. For 16mm, 35mm, 70mm and TV.

BELL & HOWELL. For 16mm.

BIRNS & SAWYER, INC. For 16mm and TV.

BUHL OPTICAL. For 16mm and 35mm.

BURKE AND JAMES. For 16mm, 35mm and TV.

CENTURY PRECISION OPTICS. For 16mm, 35mm, 70mm and TV.

CINE MAGNETICS, INC. For 16mm.

COHU ELECTRONICS, INC. For TV.

EASTMAN KODAK COMPANY. For 16mm.

ERCONA CORP. For 16mm and 35mm.

F&B/CECO, INC. For 16mm.

ALAN GORDON ENTERPRISES. For TV.

GRAFLEX, INC. For 16mm.

HENRY GROSSMAN ASSOCIATES. For TV.

KARL HEITZ, INC. For 16mm, 35mm, 70mm and TV.

OSCAR H. HIRT, INC. For 16mm, 35mm, 70mm and TV.

THE KALART COMPANY. For TV.

MITCHELL CAMERA. For 16mm and 35mm.

MOTION PICTURE CAMERA SUPPLY. For 16mm, 35mm and TV.

NATIONAL CINE EQUIPMENT, INC. For 16mm, 35mm and TV.

PAILLARD INC. For 16mm.

PHOTO SONICS, INC. For 16mm, 35mm and 70mm.

JACK PILL & ASSOCIATES. For 70mm.

PROFESSIONAL CINE PRODUCTS. For 16mm.

RADIANT CORP. For 16mm.

RED LAKE LABORATORIES, INC. For 16mm.

S.O.S. PHOTO-CINE-OPTICS, INC. For 16mm, 35mm, 70mm and TV.

WILLEY OPTICAL CORP. For 35mm.

H. WILSON CORP. For 16mm and 35mm.

ZOOMAR, INC. For 16mm, 35mm, 70mm and TV.

LIGHTING

BARDWELL & McALISTER INC. Complete line of quality lighting and grip equipment for motion picture and TV studio applications. Includes the new "Clip Strip" lighting system.

BERKEY-COLORTRAN, INC. Specialists in engineering, design and manufacture of lighting systems for motion pictures and television. Compact luminaires with related support equipment, including electronic control (dimming) systems and utilizing long life, constant color temperature, tungsten-halogen quartz lamps.

BIRNS & SAWYER CINE EQUIPMENT CO. Line of studio and portable lights including B&S Snooper underwater light for depths to 5000'.

THE BREWSTER CORP. The "Polecat" line of telescoping aluminum supports for lighting, backgrounds and display.

CINEMA BEAULIEU/HERVIC CORPORATION. Complete line of lighting equipment, including the new light-weight, easily portable Hervi Quartz kits.

JACK A. FROST. Rental, sales and service on wide range of lighting equipment.

GENERACO, subsidiary of Robins Industries. Spotlights for studio and location lighting. "Metro-Lite" ME-4 for long distance light throws of up to 400'.

GENERAL ELECTRIC CO. "Super Mate" and "MardiGras" on-camera movie lights. Lamps for all types of lighting and projection equipment.

LOWEL-LIGHT PHOTO ENGINEERING. Uni-6 lighting kit, lowel lights and barndoors, quartz and link systems. Line of grips and specialized lightweight lighting.

MOLE RICHARDSON CO. Complete line of specialized lighting equipment for motion picture and TV studios. Arc lamps, Molequartz kits, wide range of accessories.

NAREN INDUSTRIES. Line of professional equipment including spots, accessories and stands.

JACK PILL'S CAMERA EQUIPMENT. Giraffe line of portable studio stands.

CHARLES ROSS, INC. A complete inventory of the latest lighting equipment, grip equipment, props and generators available for sale or rent. Sole New York distributor of Mole-Richardson products.

SYLVANIA ELECTRIC PRODUCTS INC. Tungsten Halogen lamps for studio and television lighting. Complete line from 200 watt to 10,000 watt can be used in existing fixtures. These lamps can burn in any position and offer long life and constant light output.

WESTINGHOUSE ELECTRIC CORP. Lamps for all motion picture and television flood and spot light requirements.

EDITING, SPLICING INSPECTION EQUIPMENT

ALIED IMPEX CORP. The large, only illuminated screen of the Uher F1 Super editor permits critical focus.

IA CORPORATION. 16mm editor comes in versions with 400' or 2000' capacity. Also viewer editors for all 8mm film.

URNS & SAWYER, INC. Instant splicer for 16mm. Splicing block for 8 and 35mm.

EMMA BEAULIEU. Splicers for 8 and 16mm.

CK C. COFFEY COMPANY, INC. Side and transparency viewing and separation unit. Fluorescent illumination, steel case, plexiglass stage.

MAIG INC. Division of THE KALART COMPANY. Viewers, editors and accessories for all film sizes.

MMINS-CHICAGO, CORP. Complete line of film marking perforators for 8, 16 and 35mm.

DRE DEBRIE. The Vedette 16mm professional viewer permits high-speed inspection and aural monitoring of optical sound.

PAGE METAL PRODUCTS, INC. Wide range of splicers available for 8, 16, 35 and 70mm.

B/CECO, INC. Editing tables and viewers for 16 and 35mm editing. Automatic splicer and Magic Ear splicing tape for 16 and 35mm.

AN GORDON ENTERPRISES. Wide range of splicers for 16 and 35mm.

SWOLD MACHINE WORKS. Splicers for 8 and 16mm.

HENRY GROSSMAN ASSOCIATES. Film horses for commercial use in laboratories and editing rooms. For holding 35mm and 16mm film on cores up to 2000 ft. capacity.

GRYPHON CORPORATION. Film splicers and squeegees including Model 855 for sprocket-drive processing machines. Also, Cuematic printer control system and universal power rewind.

THE HARWALD COMPANY. Complete line of editing and viewing equipment, film inspection machinery, booking equipment, cleaner and cement.

HARWOOD ELECTRONICS CO. Editing facilities in motion picture projector stand with reel storage compartment and control panel.

HOLLYWOOD FILM COMPANY. Manufacturers and distributors of all types of film handling devices, rewinds and splicers.

INTERCRAFT CORPORATION. The KEM editing machine; microphones.

LIPSNER-SMITH CORPORATION. 16 and 35mm professional projectors for fast, safe, high speed viewing and inspection. Handles negatives, fine grains and prints. Also, ultrasonic cleaner for restoring clarity.

MAGNASYNC/MOVIOLA CORP. Series 20 editing machines for 16 and 35mm. Also rewinders, editing tables and bins, synchronizer sound readers available for optical or magnetic sound or combination.

MAGNAPHOTO CORPORATION. Meopta Meonet Editors represent high standards of premium quality both mechanically and optically.

MAIER-HANCOCK SALES, INC. The

1600 is precision made, with high quality optics. It is designed for continuous, professional use and features four rollers, one sprocket wheel and a film pressure plate with special mirror finish to prevent scratching.

MAIER-HANCOCK SALES, INC. The Portable Hot Splicer cuts, splices and welds in one operation.

RAY MERCER & COMPANY. Film Patches, Mercer Film Rule — 16mm, 35mm and 16 35 combination.

MOTION PICTURE ENTERPRISES, INC. The Pro Splicers feature automatic scrapers, stainless steel construction and precision pins. Available for 16 and 35mm.

NEUMADE PRODUCTS. Complete line of film handling accessories including power rewinds, hand rewinds, splicers, editing tables, flanges, cutting barrels, synchronizers, measuring machines.

PAULMAR, INC. Manufacturers of completely automatic high-speed 16mm film inspection machines and 8-16mm film splicers. Inspection units inspect, clean, rewind at high speed and count splices and footage of each film. Liquid film cleaning and conditioning machines also available.

JACK PILL AND ASSOCIATES. A synchronous motor modification for forward and reverse operation at sound speed adds to the versatility of the Pic Sync editor. A three position switch control forward and reverse and in the center position through an electro-magnetic clutch disengages motor to permit manual operation.

PRECISION LABORATORIES. Manufacturers of a complete line of Precision Sound Readers for optical-magnetic tracks, Precision Unitized Synchronizers, Precision 16mm Viewers and film editors.

PRETOSEAL MFG. CORP. Rewind equipment and splicers for 8, 16, 35 and 70mm.

S.O.S. PHOTO-CINE-OPTICS, INC. Data reduction editor for 16, 35 and 70mm permits rapid viewing of film in either direction. Models for magnetic and/or optical sound. Also Pic-Sync synchronizer, footage counter, viewer and sound reader.

SUPERIOR BULK FILM CO. Line of editing and splicing equipment.

TRAD CORPORATION. Hot splicers for 8, 16 and 35mm.

ZEISS IKON-VOIGTLANDER. Editor with bright viewing screen for 16mm.

ZYCO MANUFACTURING, INC. Double rank film slitter for clean cuts and extreme accuracy.

RECORDERS, SOUND GEAR

AMEGA INTERNATIONAL CORP. Sound reproducers in single, double, triple, combination and automatic models. Also portable units, modular control centers and amplifier systems.

AMPEX CORP. (Audio Div.). Professional magnetic tape equipment and related accessories.

BACH-AURICON INC. Special head for recording sound-on-film on Auricon cameras.

CALIFONE/ROBERTS, division of RHEEM MANUFACTURING. Complete line of tape recorders and players, phonographs, transcription players, public address systems, listening stations and accessories.

CINEMA BEAULIEU/HERVIC CORPORATION. Exclusive U.S. distributor of the Uher 1000 Report Pilot 1/4" tape recorder, designed for sound/film synchronization.

ELECTRO-VOICE, INC. Manufacturers of a wide range of high quality, reliable microphones for all uses.

ERCONA CORPORATION. Manufacturers of high quality dynamic and condenser microphones for home and studio use.

GENERAL CAMERA CORP. Magnetic amplifier/mixer for Auricon camera.

Continued on next page

production equipment . . .

continued

HENRY GROSSMAN ASSOCIATES. Various types of lenses — Boom and fixed focal for motion picture and TV cameras. Also Zoom & focus controls; manual and motorized.

THE KALART CO. Mixer Magnasound for recording and playback of any magnetic striped 16mm film sound track. Adds sound to silent film, records and erases in single operation.

MAGNASYNC/MOVIOLA. Full line of professional magnetic recording units for studios. Dubbers and interlocked reproducers for transfer work, assembly and magnetic mixing.

MAGNA-TECH ELECTRONIC CO., INC. Manufacturers of a complete line of professional motion picture recording and screening room equipment, including automated systems. Provide total studio design and engineering service.

J. A. MAURER, INC. Model F prime dual-track recording system for 16mm and 35mm sound recording.

NAGRA MAGNETIC RECORDERS, INC. The Nagra IV 1/4" tape synchronous sound recorder adds new features to those of the Nagra III.

OPTRONIC TECHNOLOGY, INC. Optical systems for 16mm or 35mm film. Improved forms of Maurer galvanometers.

PRECISION LABORATORIES. Precision sound editing equipment and readers.

RCA FILM RECORDING. Magnetic and optical film recording systems including PM-85 Dual Recorder Reproducer, FR-10 Recorder Reproducer and PM-80A Optical Recorder. All units are available for 35mm, 16mm, and Super 8 film, and include many features for automated operation.

ROBERTS Division of RHEEM. Complete line of microphones for all uses.

SHURE BROTHERS, INC. Complete line of microphone and accessories for recording, P. A. systems.

STANCIL-HOFFMAN CORP. Film recording equipment, amplifiers, interlock motors, other accessories.

TANDBERG OF AMERICA, INC. Portable tape recorder for professional sound film synchronization. Unit records pilot signal from camera and accommodates Tandberg synchronizer for "lip" sync.

VANDERLEELIE FILM SYSTEMS. Light sound-on-film module converts Bolex 16mm camera to single-system magnetic sound camera.

VISUAL ELECTRONICS CORPORATION. The Rapid-Q features automatic cueing equipment, can be rack mounted, desk mounted or remotied. Noiseless, the unit can be located in live microphone areas. Adopts to all tape cartridges, up to 31 inches. Reliable with maximum audio quality, the Rapid-Q is available in monaural or stereo models.

WESTREX DIV., LITTON INDUSTRIES. Magnetic and optical sound equipment for motion pictures, theatre projection and sound systems.

REELS, CANS, STORAGE EQUIPMENT

ADVANCE PRODUCTS CO. "Pixmobile" and storage cabinets for slides, filmstrips, tapes, etc.

AEROJET DELFT CORPORATION. Processors.

BELL & HOWELL CO. Complete line of 16mm reels and cans.

BUCKEYE STAMPING CO. Film and filmstrip cans.

JACK C. COFFEY COMPANY, INC. Cabinets and Storage equipment. Approximately 200 models of filing and storage units for slides, filmstrips, records, audio tapes, cassettes, video tapes, sound filmstrips, 16mm films, 8mm films, 8mm loops, transparencies, microfilm & microfiche; mobile projector stands. Mobile VTR console accepts all models VT Recorders, monitor & accessories.

COMCO CORP. 16mm reels, cans. Mobile tables, cabinets and storage equipment.

COMPREHENSIVE SERVICE CORP. Motion picture reels, cans and cases.

FIBERBILT Division of IKELHEIM-ERNST, INC. Fiberbilt case for Wollensak Tape Recorder: padded at all points of contact to cushion recorder and has a separate com-

partment for tapes, extension cords, etc. Fiberbilt film shipping cases; three major types. Fiberbilt Semi-Stock accessory cases; hundreds of styles specifically designed to protect all kinds of photographic accessories.

THE HARWALD COMPANY. Complete line of storage cabinets.

HOLLYWOOD FILM COMPANY. Manufacture and distribute reels, cans and shipping cases.

MASTEREEL INDUSTRIES. Specialized film handling equipment; interchangeable split reels.

CHARLES MAYER STUDIOS, INC. Manufacturers and distributors of filmstrip cases, vulcanized fibre.

MOTION PICTURE ENTERPRISES, INC. Line of steel 16mm reels and cans. Precision videotape reels.

NEUMAQUE PRODUCTS CORP. Flat steel reels, film and filmstrip cans, fiber shipping cases.

PLASTICAN CORP. Lightweight plastic filmstrip containers and 2 x 2 frames for storage.

PLASTIC REEL CORPORATION OF AMERICA. "Plio-Magic" plastic film shipping cases, reels and accessories. Videotape, magnetic tape reels; processing rollers, bearings and bushings.

RICHARD MANUFACTURING CO. Full line of "Poly-Can" plastic filmstrip containers; 10 colors; attached lids.

WILLIAM SCHUESSLER, Div. of Ludwig Industries. Complete line of motion picture and filmstrip shipping cases. Custom made cases of all types.

TAYLOREEL CORP. "Tayloreel" line of film cans and shipping cases in all sizes.

WALLACH & ASSOCIATES, INC. Sectional, double door and mobile cabinets and racks for storage and filing of films.

H. WILSON CORPORATION. Manufacturers and distributors of a wide range of storage for A-V equipment, including Instructional Materials Filing Cabinets, wall and ceiling mounts and tray cabinets.

Complete addresses of manufacturers and companies listed here appear at the end of this listing section.

TV CAMERAS

AMPEX CORPORATION. The basic CC-330 camera features an integrated 9-inch electronic viewfinder; local or remote control beam, focus, target gain and blanking level; amplified intercom; iris control (which lens has this provision); zoom lens operation and tally light. Two versions of this closed circuit, studio-type television camera have been placed on the market by Ampex Corporation educational and industrial products division.

RCA CORPORATION. Single track color cameras from RCA make color television practical for many users. Cameras are small, light, easily operated by novices. PK-730 is a studio viewfinder camera. PK-710 designates a complete color film system for originating TV programs from 16mm motion pictures and film slides.

SHIBADEN CORPORATION AMERICA. The Shibaden FP-2000 is a 2" 1.0 camera with viewfinder offering the higher sensitivity characteristics of an image orthicon camera while maintaining the compact and easy operation functions of a vidicon camera. The FP is ideal for educational or industrial use where high image definition and resolution is essential, particularly where the camera is used for video recording.

SONY CORPORATION OF AMERICA. Videotape cameras.

VIDEOTAPE RECORDERS

AMPEX CORPORATION. The A-

-7800 and VR-5000 feature tape interchangeability with each other as well as with other models in the Apex one-inch line. Also other used circuit and broadcast video-recorders.

BERTS, Division of RHEEM MANUFACTURING. The model 1000 is a combination video and stereo tape recorder, with all ferrite beads, four motors, and many other features.

HIBADEN CORPORATION OF AMERICA. Wide range of videotape recorders, monitors and accessories.

ANY CORPORATION OF AMERICA. 1/2" & 1" helical scan formats. standard recorder EV310 may be used for both B&W and color with the addition of a color pack. The 320 is an electronic editing machine. Many other models available.

SUAL ELECTRONICS CORPORATION. The VS40 Compact High-Band Video Tape Recorder (monochrome color) is mounted on skids for portability. Ideally suited for closed circuit use.

CHEMICALS

Motion picture processing chemicals are available from Agfa-Gevaert, H. G. Cramer, E. L. DuPont De Nemours, Eastman Kodak Co., FR Corporation, Philip A. Hunt Chemical Corp., 3M Company, GAF Corporation, Ilford, Inc., and Superior Bulk Film Co. See address list at end of the section for complete addresses.

MOTION PICTURE PROCESSORS

ARTISAN INDUSTRIES, INC. (Hi Speed Equipment Division). Products for the photographic laboratory manufactured by Hi Speed Equipment include: Hi Speed Spray Developing Machines—black and white—negative/positive Eastman Color Equipment — Kodachrome, Ektachrome and Ansochrome Installations — Silver Recovery Systems — Custom Photographic Processing Equipment — Laboratory Engineering Service.

BURKE & JAMES. Portable developing units for 16, 35 and 70mm.

H. G. CRAMER COMPANY. Cramer Model 68 Mark 1 Motion Picture film
Continued on next page

laboratory equipment . . .

continued

processor. Continuous Automatic for black & white processing. Combination rollers to accommodate either 16mm or single-Super 8 film. Will process to any image, reversal, negative, positive. 400 feet of film can be processed with one filling of the machine. Elevator legs for precise timing of each tank regardless of the overall speed of the processor. Will process 8 feet per minute (reversal).

ANDRE DEBRIE OF NEW YORK. Automatic daylight film processor at speeds of up to 1400 feet per hour.

FAIRCHILD CAMERA & INSTRUMENT. The "Mini-Rapid 16" automatic processor for 16mm negative or positive features leaderless loading, self-threading.

FILMLINE CORPORATION. Daylight and darkroom processors for 16, 35 and 70mm. Specially designed units for TV stations.

OSCAR FISHER CO. Semi-portable Mark 16/35 for 16mm and 35mm processing; also "dry" spray immersion film processor.

ALAN GORDON ENTERPRISES. Daylight operation A-9 portable processor for black & white films. Automatic processors for 16 and 35mm.

GRYPHON CORP. Processing previewer for motion picture processing machines.

HOUSTON FEARLESS CORP. Complete line of processors and related equipment.

JAMIESON FILM CO. Mark IV 16mm color processor with patented tube tank reducing amount of solution in use.

JANPRO. Film Processor Rollers and Bushings. Precision molded plastic film rollers and parts for use in film processing machines and related equipment.

MARK SYSTEMS, INC. Bimat processors for 16, 35 and 70mm films. Extensive line of specialized processing equipment and materials.

J. A. MAURER INC. Portable film processors for 16mm, 35mm and 70mm.

METRO/KALVAR, INC. The Model 135/16 convertible Printer-Processor

produces Black & White 35mm, 8mm or Super 8 positive prints at up to 100 fpm, cleans the negative and raw stock just prior to exposure, permits variable contrast, timing and print inspection in one continuous operation in ordinary room light without chemicals or solutions of any kind.

PAKO CORPORATION. Tabletop Maurer-Matic Model 153-M for 16mm and 35mm film. Cine Strip processors for 16, 35 and 70mm films.

SICKLES, INC. Circle S automatic color film processor for 16, 36, 46, and 70mm color films.

TRIESE ENGINEERING, INC. Line of continuous film processing equipment and accessories. Custom design and building for any processing need.

UHLER CINE MACHINE CO. Sound and silent processors for 8mm and 16mm films.

PRINTERS

AEROJET DELFT CORP. Reduction and contact printers for 16 and 35mm films.

BELL & HOWELL CO. Film printing equipment for all sizes. Professional additive color printing system.

BERKEY TECHNICAL, OXBERRY PRODUCTS. Special effects optical printer series for complete control over film to have wipes, ripples, dissolves, etc. included.

ANDRE DEBRIE OF NEW YORK. Complete line of step printers in contact and optical. "Tipro RA" optical printer, reduces, enlarges, makes 16mm and 35mm contacts.

FOTOVEND CORP. Line of ultra high-speed contact and reduction printers. Basic models "Mark 500 & 600" series include table and power units.

HOLLYWOOD FILM COMPANY. Manufacturers and distributors of High Speed Printers, Slitters, Inspection Projectors, Edge Numbering machines for Professional Laboratories.

METRO/KALVAR, INCORPORATED. The Model 135/16 convertible Printer-Processor produces Black & White 35mm, 16mm, 8mm or Super 8 positive prints at up to 100 fpm, cleans the negative and raw stock just prior to exposure, permits variable contrast, timing and print inspection in one continuous operation in ordinary room light without chemicals or solutions of any kind.

OPTRONICS INDUSTRIES INC. Line of optical printers engineered by Maurer include both step and continuous high speed printers in 16/35mm, 16 16mm and 16/Super 8.

PETERSON ENTERPRISES, INC. The color additive panel printer is designed for high volume color release printing and is built for use with standard 1" 8-hole tape system.

PRECISION LABORATORIES. Special printers, processing and tanks for the film laboratories.

PRODUCERS SERVICE CO. Line of Acme optical printers and special effects printers.

RESEARCH PRODUCTS INC. Line of optical printers in 8, 16, 35 and

70mm. Custom built special effect equipment to order.

S.O.S. PHOTO CINE OPTICS. Line of professional motion picture printers. All formats from Super 8 to 35mm cinemascope.

SUPERIOR BULK FILM CO. Portable fully automatic L&F printer operate in daylight and provides reversal printing.

UHLER CINE MACHINE COMPANY. Complete line of printers, including Cine Printer for Super 8, 8mm and 16mm for sound and picture all incorporated in one small machine. Reproducing perfect contact, clear and steady pictures.

Same Day Film Processing

Ektachrome commercial film processing with same day service is described in a two-color brochure offered by WRS Motion Picture Laboratory. The brochure describes the company's new ECO processing machine, specifically designed to handle 7255 Ektachrome Commercial, plus EF, EFB, and MS film. Designed by WRS in close coordination with Eastman Kodak, the WRS ECO machine incorporated innovations in photographic research from Rochester, and meets Kodak ECO processing specs.

For the brochure, write *WRS Motion Picture Laboratory, Dept. BSC, 210 Semple Street, Pittsburgh, Pa. 15213.*

Luxor Catalog Available

A 32-page catalog giving complete details of all Luxor products lists more than 200 products for use in schools, churches, industry and government by audio visual departments, instructional materials centers, training departments, libraries and film departments. The catalog lists three series of library units for filing and storing AV and instructional materials plus mobile multi-height projector and TV receiver stands, mobile storage/projection centers, mobile videotape recorder console, the Luxor AV and instructional materials record system and various forms and materials for AV library use.

Write for catalog #3269 to *Jack C. Coffey Co., Dept. BSC, 104 Lake View Ave., Waukegan, Ill. 60085.*

Association Films Catalogs Available

Association Films, Inc. has just released its 1969-70 catalog covering an expanded library of educational and entertainment films and filmstrips that are available on a free-loan basis to community and educational groups and television stations. The company, which reached over 700 million viewers last year, offers a diverse selection of subjects, including economics, science, health, safety, fine arts, nature studies, sociology, technology, travel and sports.

Through its Association Instructional Materials division, Association Films has also released its 1969-70 Sale/Rental catalog which includes many outstanding productions. The catalogs are available by writing *Dept. BSC, at the Associations Films distribution center nearest you.*

Fresh start

for your old film

Whatever the condition of your film, Rapid can repair, restore and rejuvenate it.

No matter how scratched, brittle, oil-stained or dirty it is. No matter how badly spliced, Rapid can give it new life.

That goes for color as well as black and white; 8, 16, and 35mm.

What's more, after we've revitalized the film we give it a special protective coating that resists future damages.

So why spend a fortune on new prints? Come to Rapid Film Technique and renew your old ones.

Use handy coupon below to send for your FREE Trial Certificate and see for yourself what dramatic effect rejuvenation can have . . . on your films and on your budget.

MAIL COUPON TODAY!

RAPID FILM TECHNIQUE, INC.

Dept. B, 37-02 27th St.,
Long Island City, N.Y. 11101

Send me FREE Trial Certificate to test Rapid's rejuvenation process.

Send me FREE brochure, "Rapid Gives New Life To Old Film."

Please have a rejuvenation specialist call me to discuss my film library and show me how to save money.

Color TV Camera Brochure

A two color, 8 page brochure explains the operation of the VP3 Color Television Camera and describes the basic features of all the contributing camera components. The camera weighs 90 pounds and features optimum broadcast studio quality color and ease of operation.

For the brochure, write *Visual Electronics Corporation, Dept. BSC, 356 West 40th St., New York, N.Y.*

Ampex Fact Sheet

A fact sheet, V69-20, describing the performance and specifications of the Ampex VR-7500X high resolution closed industrial and educational recording applications is now available from *Ampex Educational and Industrial Products Division, Dept. BSC, 2201 Estes Ave., Elk Grove Village, Ill. 60007.*

Full-Line Catalog

Bardwell and McAlister has prepared a fully illustrated, full-line color catalog. It details a complete line of "quartz" lighting equipment and accessories available to the motion picture, TV and still photography industries. A copy of the catalog is

available by writing *John M. Ray, Executive Vice-President Bardwell and McAlister, Dept. BSC, 6757 Santa Monica Boulevard, Hollywood, California 90038.*

Directory of Photography

The 1970 Directory of Professional Photography, designed for use by buyers of quality professional photography, has been published by the Professional Photographers of America, Inc. It is particularly useful to advertising and public relations managers and agency account executives. The directory carries a complete geographical listing of nearly 13,000 members of the PP of A throughout the United States, Canada and 32 other countries.

Separate sections list portrait and commercial photographers available for assignments, and industrial photographers who work in business or industry and are for photographic studios.

Any buyer of photography may receive a copy of the PP of A's Directory of Professional Photography, without charge by writing on company letterhead to *PPA Publications, Inc., Dept. BSC, P.O. Box 452, Des Plaines, Ill. 60018.*

Carnet — Important New Word for Filmmakers

Carnets may well be one of the most significant aids to the filmmaker filming abroad to become available recently.

In case you haven't heard, "carnets" are customs documents that greatly reduce the red tape involved in crossing from one foreign country into another.

Administered by the U.S. Council of the International Chamber of Commerce, carnets are issued in advance to Americans going abroad with business or other equipment that will eventually be returned home. Customs arrangements are made in advance at a pre-determined cost for all the countries on an itinerary.

The carnet arrangements may even be made by mail provided a U.S. customs inspection of the equipment is made.

By participating in the carnet program, the U.S. has joined several others in the program

that has been effective in parts of the world for about a decade. It eliminates the need to fill out endless forms when entering and leaving a country participating in the program.

By issuing the carnet, the U.S. Council in effect guarantees to foreign customs officials that any tariffs, charges and taxes on material listed on the carnet that is not taken back out of the country will be paid by the Council's counterpart organization in that country.

The carnet system covers a number of items including engineering, entertainment and electronic gear. But most important to the peripatetic filmmaker is carnet coverage of cameras and cinematographic equipment. Paint, cleaning materials, gems and food are not covered.

Countries presently participating in the program include Austria, Belgium, Luxembourg, Bulgaria, Czechoslovakia, Denmark, Finland, France (Guadeloupe,

Guyane, Martinique, Reunion), West Germany, Hungary, Ireland, Israel, Italy, Ivory Coast, Netherlands, Norway, Portugal, Rumania, Spain, Sweden, Switzerland, United Kingdom (Gibraltar), United States and Yugoslavia.

A free brochure with details about the carnet program is available from the U.S. Council of the International Chamber of Commerce, 1212 Avenue of the Americas, New York, N.Y. 10036.

Acme Introduces Newest Transfer Process

Acme Film and Videotape Laboratories, Inc., recently introduced the newest advance in their Acme Chroma videotape-to-film transfer process.

At a special presentation hosted by Mel Sawelson, a demonstration of the results of a new solid state color film recording unit was shown.

The new unit increases definition as much as 25%-30% in addition to allowing for greater stability and much less variation than previously possible. Several unique corrective devices have been built into the unit.

A second unit is currently being completed incorporating everything used in the prototype, now in full use at the Hollywood laboratory.

No decision has yet been made as to whether the unit will be marketed to other firms.

DFI Communications, Inc. Makes Two Acquisitions

DFI Communications, Inc., recently acquired Golden-Penn Theatre Ticket Service and Communications Group, a film and TV production and distribution firm.

Golden-Penn, organized in 1957 pioneered the concept of mass sales at box office prices and innovated the credit card system as applied to the purchase of theatre and sports tickets.

The Communications Group actively engaged in the production and distribution for the film and TV industry through its subsidiaries: Gerald Productions, Sponsors Film Service, Sight Sound Productions, and Callwell Pictures.

Both acquisitions were made with an exchange of DFI stock for 100% of the acquired companies.

Interesting Reading

Some fascinating reading for filmmakers is contained in a new booklet, "Byron on Film", authored by Byron Roudabush, president of Byron Motion Pictures.

Basically a semi-technical booklet covering all phases of motion picture production, subjects range from positive pitch and negative pitch to tracking, mix, sound editing and prints.

Copies of the booklet are available by writing Byron Motion Pictures, Dept. BSC, 65 K Street, Northeast, Washington, D.C. 20002. *point & per*

**THE COMPLETE BUYER'S GUIDE AND REFERENCE BLUE BOOK TO QUALIFIED PRODUCERS
OF BUSINESS AND TELEVISION FILMS IN THE UNITED STATES AND ABROAD**

America is in better shape today.

Thanks to Prudential...

...and its physical fitness films.

No company is more concerned with our nation's health than the Prudential Insurance Company of America. And no company is more aware that regular exercise can help us live healthier, happier lives.

That's why Prudential wants young people to get an early start on their fitness and conditioning program. To encourage them, the company is sending top sports stars to classrooms all over the country. On film.

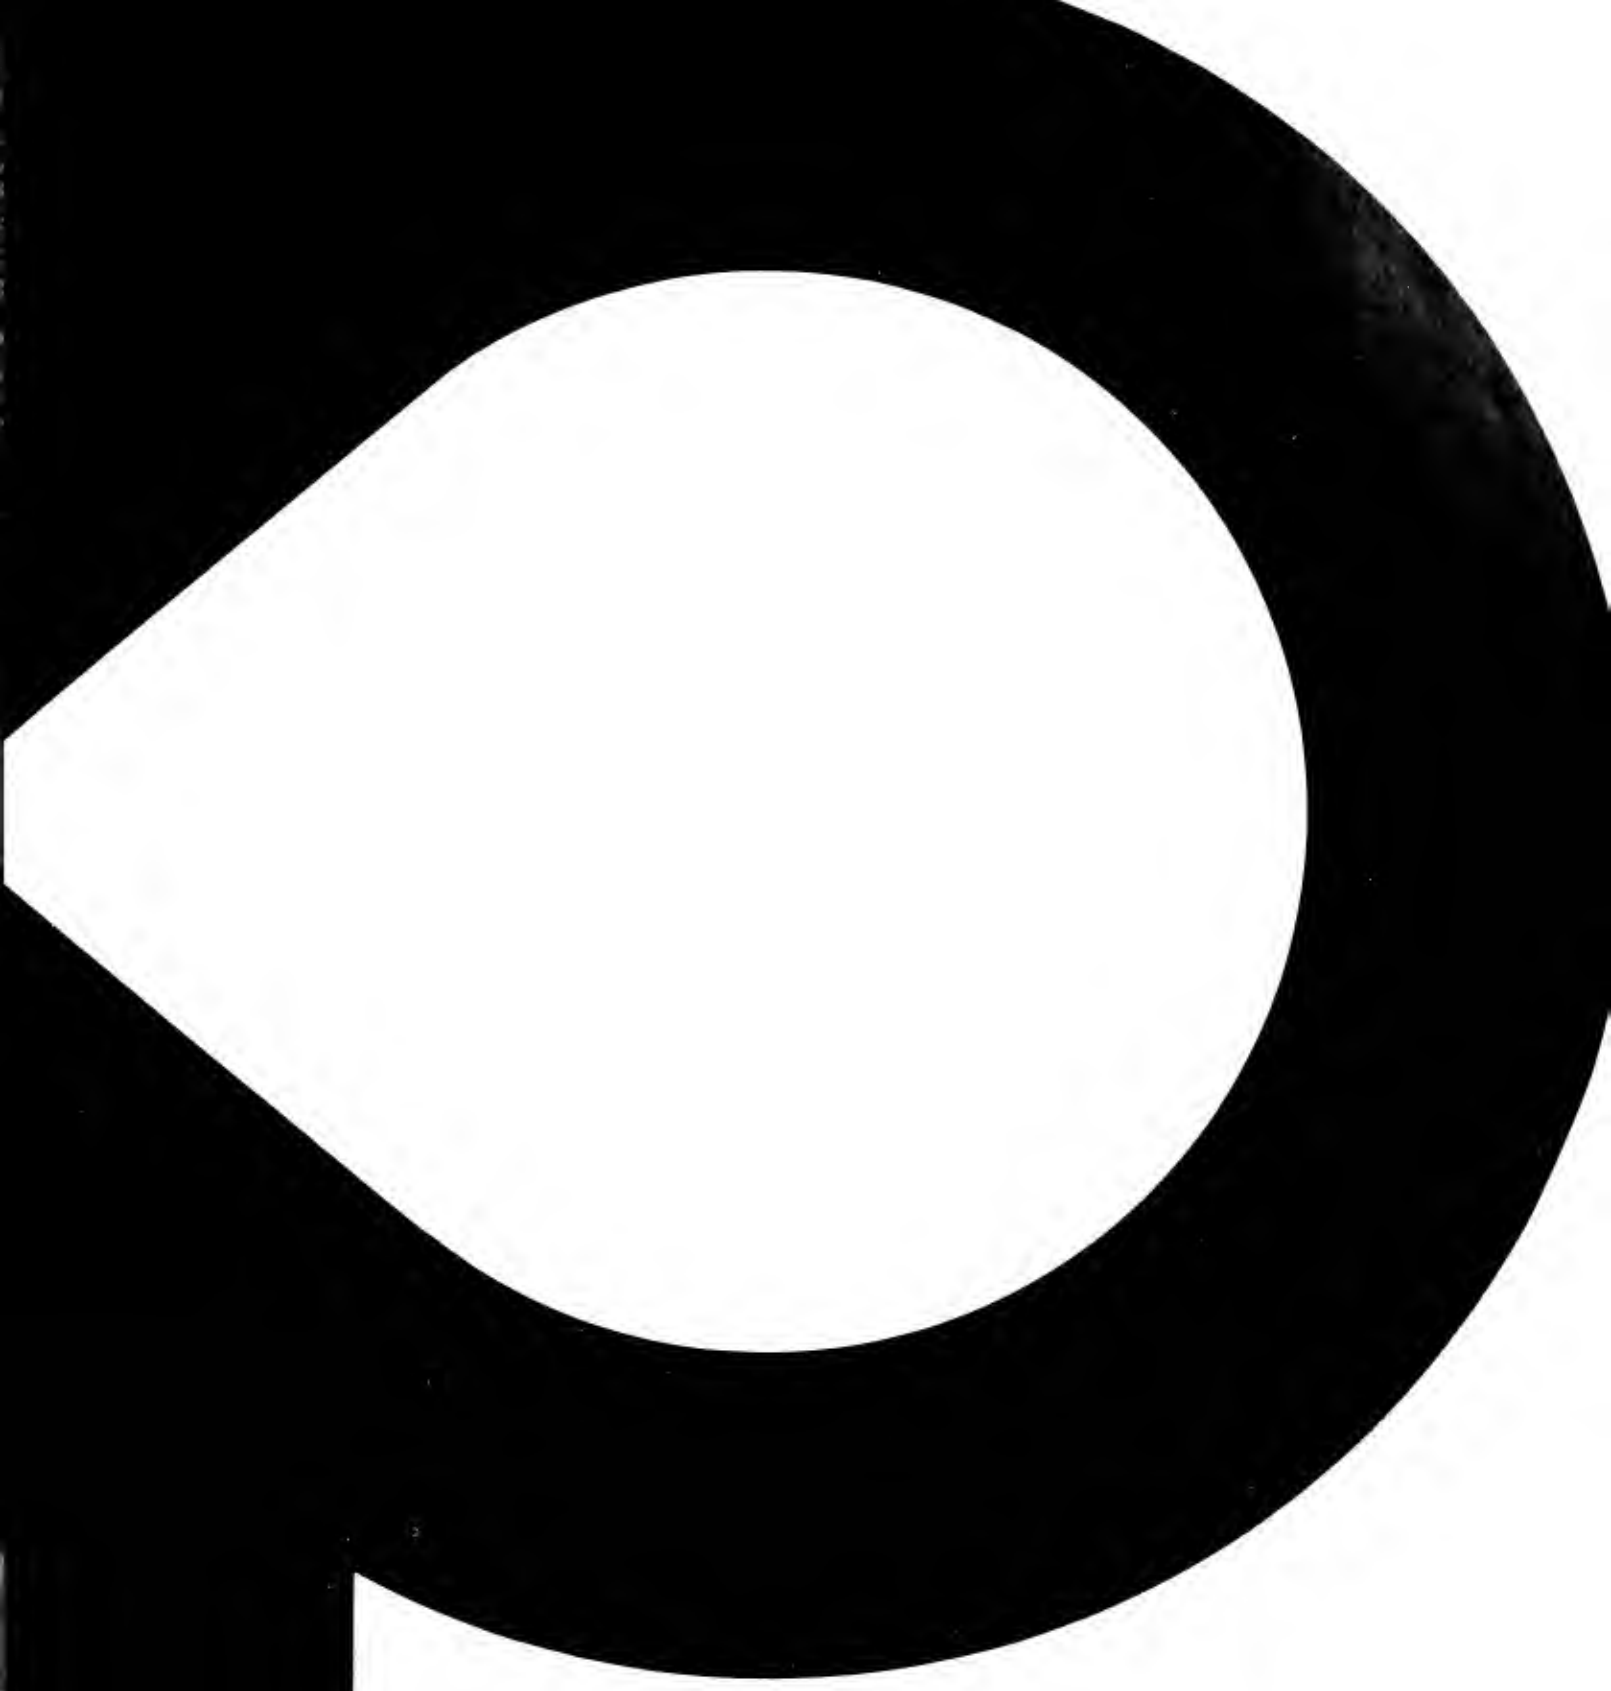

Famous athletes such as Carl Yastrzemski, Gale Sayers, Bob Gibson, Hank Aaron, and Bob Hayes are giving millions of students all kinds of valuable

football and baseball tips. They're also teaching these youngsters how to stay in shape, and why exercise is so important to their future.

Prudential produced both of its exciting films as a public service, in cooperation with the President's Council on Physical Fitness. With each film, Prudential offers a supply of fitness books, free of charge.

To make sure their message reaches the largest possible student audience, Prudential called in another "pro." Modern. The world's largest distributor of sponsored films. If you think we can add strength to *your* team, call or write today for more information.

MODERN TALKING PICTURE SERVICE, INC.
1212 Avenue of the Americas, New York, N.Y. 10036

Every communications problem has a common objective . . .
a message effectively delivered to produce a desired
influence or response. The attainment of this requires a
delicately balanced blend of message, approach, and
medium, a balance that can be effected only by specialists.

We can go half-way to the moon each year.

Working our normal 3 shift, 5-day union work week, Byron is capable of turning out enough film each year to stretch half-way to the moon. And we're adding both super 8 mm and 35 mm color. So maybe we'll get there next year.

How to recognize genuine
Arriflex factory mounted
zoom lenses

Standard mount
is black anodized—
with ARRIFLEX
engraved trademark.

Heavy duty mount
is natural steel—

in its continuing strive for perfection:

**ARRIFLEX® presents
the new heavy duty
steel bayonet lens mount with
matching lens socket in a new turret
now on all Arriflex 16 and 35 cameras**

The new popular high-performance zoom lenses have solved a lot of cinematic problems—but they created a few, too. Their ability to produce a high-resolution, high definition image depends upon their ability to be correctly seated in relation to the focal plane—focal flange distance, optical alignment and precise centering are, as always, critical. Yet, because of the length and heavy weight of these lenses, maintaining proper seating could be done only with brackets or cradles—which, in turn, added weight and bulk, and made quick lens changes impossible. The new Arriflex heavy-duty Bayonet-Lock lens mount and matching turret have been designed to solve these problems in the most efficient way: to assure precise seating without the encumbrance of extra equipment.

Now the most popular zoom lenses such as 12.5/75mm, 9.5/95mm, 12/120mm and 12/240mm Angenieux and 12.5/75mm Vario Sonnar for Arriflex 16, and 35/140mm and 25/250mm Angenieux for Arriflex 35 will be available with factory installed heavy duty mounts. Other heavy and long lenses such as telephoto or retrofocus wide angles will similarly be equipped at a later time.

TECHNICAL DETAILS:

The new heavy duty bayonet, as well as its matching lens socket are made of extra hard specially fabricated steel castings and machined within closest tolerances. This assures precise and lasting lens seating and alignment for heavy and long lenses, such as zoom optics. Wear of lens mount and socket is practically eliminated. Only one lens socket on each three lens turret is such equipped. A new lock is now also built into each turret on the opposite side of the heavy duty socket. This lock not only arrests turret but also serves to relieve further strain on the entire turret when heavy lenses are mounted. Lenses with standard Arriflex mount can be inserted into the new heavy duty socket in the conventional way. Conversely, lenses with heavy duty Arriflex mount will not fit into standard lens sockets.

Calvin Slates 24th Annual Workshop February 2-4

Calvin Communications, Inc., will host its 24th Annual Motion Picture Workshop February 2, 3 and 4, 1970. The Workshop will be held on the sound stages and throughout the facilities of Calvin Communications, Inc., 1105 Truman Road, Kansas City, Missouri.

The Workshop program will review basic procedures in all phases of motion picture production and will examine many of the newer aspects and developments occurring within the industry.

Included will be film examples, discussions, displays,

staff and guest speakers, special presentations related to film making.

There is no cost for attendance at the three day event. Calvin requires advance notice of plans to attend and will confirm all reservations by mail. Attendance is limited to 800 on a first-come-first-served basis. Last year advance registrations hit the 800 mark in December.

VPI Consolidates to One Line Service Concept

Since Sheldon Satin assumed the presidency of VPI in July, several significant changes have been made in the company's op-

eration. Newest move is the establishment of VPI Services.

Designed specifically to meet the total post-production needs of the commercial producers, their agencies and agency clients, VPI Service groups six separate services and consolidates management functions of previously independent operations in one full line service concept.

To head up VPI Services, Robert C. Winkler moves from president of Video Prints (now one of the services) to president of the entire post-production operation, which includes *Editors, Opticals, Color Consultants, Laboratory, Print Distribution and Shipping.*

Heads of all these services report directly to Winkler in a move to centralize management of post-production.

In the meantime, Satin's *Directors Center*, in the first official month of operation (it tested out for about a year) has been busy producing commercials both singly and in series—and has also inaugurated "fixed-fee" production plans with two major ad agencies. Under the terms of this unusual arrangement. The Directors Center becomes an extension of the production department at the agency. To effect this arrangement, The Directors Center be-

LOW COST, READY TO USE BACKGROUND SCENERY AVAILABLE NOW!

Simulated oak paneling: one of our many low cost scenic backgrounds.

Inexpensive, pre-fabricated scenic backgrounds are now available for motion picture production. No longer is it necessary to plan on spending large amounts of time and money constructing sets in the conventional manner. With our pre-built, completely realistic scenic units, all components needed for any set are available in ready to use 4' x 8' panels. All you have to do is prop them up and start shooting. For example, that solid oak paneling you see in the photograph isn't really genuine but you'd never know it. That set was put together in less than an hour . . . by one man! We call it "instant scenery" but on camera, the look is completely authentic and just imagine the potential savings in manpower and budgets.

We have a whole collection of different backgrounds available, all equally as realistic. English, Italian, Spanish and French panelings, brick walls, fieldstone, logs, shingles, roof tiles and barnwood siding are just a few of the many settings we supply. Each unit is a *fully dimensioned, precisely detailed* replica of the real thing hand painted in true to life colors. If your company needs authentic but inexpensive scenery that sets up in a hurry, and is also easily stored, just check with us. Chances are, we've already got it made up for you.

Cameras Substitute for Pencil, Paper in Test

Fourth grade students in four elementary schools in Chicago and one in Minneapolis are taking part in a research project that substitutes cameras and film for pencil and paper in teaching the fundamentals of composition.

The project, termed Curriculum for Visual Media Composition, is being conducted by the Communications Division of the Sisters of Charity, BVM, Chicago, and funded by the Audio-Visual and Consumer Products Divisions of Bell & Howell Company.

Designed to run for three consecutive school years, the project, which began in October, puts Super 8 movie cameras into the hands of a class of fourth graders at each of the schools. These students will make motion pictures that express their creative thoughts, while a control group of fourth graders at each of the same schools will use the traditional paper and pen to convey their thoughts.

Test results and evaluation of individual student progress are expected to demonstrate comparative learning achievements between the experimental and control groups.

Sony Opens Videotape Production Center

Sony Corporation of America has opened its Video Tape Production Center at 165 Tuckahoe Road, Yonkers, New York, according to Richard F. O'Brien, vice president.

Services offered by the center include tape duplication (in either 1/2-, 1-, or 2-inch formats); tape-to-tape, tape-to-film, and film-to-tape transfer; complete studio facilities for internal and external use. Both color and monochrome equipment are

available for the production of video tapes.

The center boasts equipment that permits the production of video tapes in any configuration and to any standard. Multiple tapes may be made for any of Sony's Videocorder® video tape recorders.

Complete information, including price lists and studio rental rates, is available from Eugene Maffei, manager, Sony Video Tape Production Center, 165 Tuckahoe Road, Yonkers, N.Y. 10710.

AGE Inc. Introduces Samuelson Line in U.S.

Alan Gordon Enterprises Inc. is the first U.S. firm to make available several new cinema products being marketed for the first time by Samuelson Film Services Ltd. of London.

The products, which were introduced in this country by David Samuelson of the British firm at the recent SMPTE Convention in Los Angeles, are now in stock in Hollywood.

They include the KingKlapper, a compact electronic audio and visual clap board with an integrated signal generator and synchronizing light; the Dawe Cine-strobe, which provides powerful short-duration light in synchronization with the shutter of the professional cine or TV camera; the Samcine Limpet Camera Mount, which can be attached to any smooth, non-porous surface; and Acrylic Window Filter Sheets, which are 1/8" thick 5'x 8' plastic filters designed for converting window light to tungsten.

Samuelson said this is the first time his company has made its products available for sale. Heretofore the firm was primarily a professional motion picture equipment rental house.

Further information on the products may be obtained by contacting Alan Gordon Enterprises Inc., 1430 N. Cahuenga Blvd., Hollywood, Calif. 90028, (213) 466-3561. Samuelson says AGE Inc. will be joined by other U.S. distributors in handling his products in the near future. •

Principles of "Practical Idealism" Applied to Films and Film Festivals

PRACTICAL IDEALISM, as we choose to call it, is of paramount importance in this troubled world and nation and in our own special "world" of factual, informational film production. For without the moving force of spiritual ideals, of belief in the brotherhood of man and his right to all the freedoms, we are as nothing to ourselves or to any man. Yet, idealism must be practical, it must achieve through unified action, follow the principles, observe the standards—while always reaching out for improvement and fulfillment of aims and goals.

Practical idealism is reflected in many of the titles which are the "credits" of the family of experienced, specializing producers who make this 20th Annual Production Review the recognized, widely-used sponsor/agency reference it has become. For motion pictures and other forms of audiovisual presentation created by these companies are helping to bring *understanding and means of effective action* toward the solving of problems of human relations, food and fiber production, greater safety and health in the plant, home, office and on the road. World problems of population and pollution, the assistance of underdeveloped peoples, equality of opportunity for men of every race and creed, the exploration of sea depths and the vastness of outer space are all reflected here in the works of these film makers.

Practical idealism had better also motivate us to review progress in the search for recognition which has brought so many "film festivals" into existence. In the U.S. this has become a mixed blessing. Exposure of worthwhile product to fair and equal competition is one thing; submission of hundreds of titles to serve some individual's personal profit is quite another.

Let there be standards to which all sponsors and producers can clearly agree: the quality of judging known far in advance; the true sponsorship of each event openly identified in advance; fairness of competition which assures each entrant that his film will be judged *within the special category of its content* are among the most urgent standards to be met.

And let the standards of events which have met such criteria be widely known. It is a great honor to achieve recognition in the National Safety Film Contest, for example. Specialization of content is obvious;

judging by members of the National Committee on Films for Safety, after careful review of accuracy by specialists in subject areas within the National Safety Council makes these citations of real value. The fact that they are presented before sizeable audiences at each year's National Safety Congress is an added incentive.

Selection by regional and national screening groups who serve the Council on International Nontheatrical Events (CINE) may only bring a "Golden Eagle" certifying selection for submission to represent the U.S. abroad. But it can also bring one of the many trophies bestowed to date on hundreds of U.S. factual films in lands abroad.

On the national scene, competition for educational values and the "Blue Ribbons" of the Educational Film Library Association, has special merit; through the years, few cities have given so much of their leadership talents and time as the tireless sponsors of the Columbus Film Festival, co-sponsored by that Ohio city's Commerce Association.

Key phrases have merged which such events have in common: *non-profit sponsorship* and either national or regional participation by established, specializing organizations. The Chicago International Film Festival has achieved that status of non-profit operation. And we have found it worthwhile to do more than talk: we have aided this civic endeavor to better its calibre of jury operation. Atlanta has moved in the right direction, too, through its affiliation with the "Forward Atlanta" community organizations.

Every organized group within the trade itself owes it to its memberships to review film competitions, their standards, their costs and their resultant values. Contribute to and participate in those which attract potential users of these films; support those which truly lift our medium; deny such support when objectives are unclear and values dubious. Those which receive your support through entries and contributions will raise both national and international acceptance of the great medium to which we are dedicated.

It will always, we trust, be the view and practical idealism of BUSINESS SCREEN to actively participate in, to support and to publicize those events which merit your interest. Through jury service, at home and abroad, through our service as an officer

continued

and member of the Board of CINE since its inception, and through our present guidance of a first sizeable delegation attending the "world model" of all Festival events: the 10th International Industrial Film Festival at West Berlin this year, we serve the cause of practical idealism which we preach.

Sponsors and producers of the many outstanding films credited in these pages do the same thing in an even greater way: for they have brought the light of understanding and the sound of action to peoples of all ages, creeds and needs throughout the world. We honor them with listing. Those who acquire and distribute these films to their intended audiences make it possible to fortify their creative efforts and pave the way for even greater effort in the year ahead.

World Standard for Film Competition Set by Int'l Industrial Festivals

FOR A DECADE, Europe has been providing sponsors, producers and distributors of industrial/informational motion pictures with what is truly the world's foremost showcase for the medium and its only world forum for those directly concerned with the factual film's problems and potentials. Each year since this event was first held in Rouen in 1959, the International Industrial Film Festival has been held in a different European city. Rouen, London, Madrid, Lisbon, Venice, Vienna and West Berlin have been among the host cities.

On the eve of the 10th International, which returned to Berlin in November, it was important to reflect on *why* this particular event has achieved first rank. First, its European sponsor each year is *not* a profit-minded individual, its aim is *not* to promote tourism and it is unaffected by producers or those with commercial aims within the studios or plants of our industry.

The Confederation of European Industrial Federations, comprising each of the national manufacturing organizations, the principal labor and industrial associations

of all of Western Europe, give tremendous status to this annual event. The process of selection of the films which come to the Festival for final judging is through separate national competitions where each country's maximum of 15 entries are most carefully judged.

In the United States, region committees which serve the Council on International Nontheatrical Events (CINE) help send suitable titles of international interest and value to a "final" judging by the special CINE Committee formed on behalf of the National Association of Manufacturers. In the U.S., as well as among all participating countries abroad, entries can only be submitted through each nation's manufacturer association.

Some U.S. entries will not have reached West Berlin because their sponsors did not elect to meet the entry fee. But at least 10 industrial films will have competed at West Berlin as the official U.S. entries in the seven categories for which they are eligible.

Joining with us on the trek to Europe were Robert O. Beatty (with Mrs. Beatty), Director of Public Relations and Advertising, Boise Cascade Corporation; Jack Gabrielson (with Mrs. Gabrielson), Manager, Film & Television Communications, McDonnell-Douglas Corporation; Richard Roxas (and Mrs. Roxas), Manager of Meetings & Presentations, Westinghouse Electric Corporation; E. B. (Jack) Hall, Information Film Service Manager, Eastman Kodak Company; Michael Ritt, Jr., International Sales Promotion Manager and head of Audio-Visuals, Combined Insurance Company of America; Johna Pepper, Manager, Film & Electronic Communications, Ford Motor Company; Robert F. Unrath, Port Promotion Manager, World Trade Department, The Port of New York Authority; Harold Daffer, Staff Film Producer, Honeywell, Inc.; and William W. Walton, Manager, CCTV-VTR & Audio-Visual Services, IBM. Bill Walton is president of the Industrial Audio-Visual Association. •

**DEPARTMENT OF
AGRICULTURE
Office of Information
Motion Picture Service
Washington, D. C. 20250**

• The Motion Picture Service of the USDA produces motion pictures in color and black-and-white on agricultural and related subjects for various agencies within the Department and, on occasion, for other Government agencies. Production and laboratory services are also available on a cooperative basis with land grant colleges and universities.

- Martin Lobdell, *Chief, Motion Picture Service*
Phone: DUDley 8-6072
- Homer Boor, *Producer*
Phone: DUDley 8-3628
- Judd Scott, *Producer*
Phone: DUDley 8-6518
- Gilbert Courtney, *Producer*
Phone: DUDley 8-3319
- Joseph Sanders, *Chief, Business Management*
Phone: DUDley 8-7263
- Arthur Foster, *Chief of Laboratory*
Phone: DUDley 8-6747
- James E. Alford, *Chief of Distribution*
Phone: DUDley 8-5246
- Mrs. Anne Ware, *Stock Footage Librarian*
Phone: DUDley 8-3629

ACTIVITIES: The USDA currently has more than 300 films in distribution with an estimated audience of 380 million persons. These films cover such subjects as conservation, forestry, agricultural research, insect eradication, control of animal diseases, consumer information, rural area development, nutrition and marketing. Maintains an extensive 16mm color stock footage library of agricultural scenes which are for sale at nominal cost.

FACILITIES: The USDA Motion Picture Service has complete in-service production and laboratory facilities which have been in continuous operation since 1912.

DISTRIBUTION: Films for school and group showings are distributed through 69 cooperative film libraries located in each state. Films for TV bookings are distributed directly from the Distribution Section, and prints of most films may be purchased from the Business Management Section. Catalogues are available of motion pictures, films suitable for TV showing, and of stock footage scenes.

PUBLICATIONS: Two catalogs contain complete listing of USDA motion pictures; one of these provides data on films for general 16mm distribution; the other lists films available for public service showing by television stations.

**UNITED STATES
ATOMIC ENERGY
COMMISSION
Division of Public Information
Audio-Visual Branch
Washington, D.C. 20545**

• The Audio-Visual Branch of the Atomic Energy Commission has as its primary function responding to requests from the public media in all the audio-visual fields for assistance in the preparation of films, stills, tapes, slides and other audio-visual materials on atomic energy.

- Edwin L. Wilber, *Branch Chief*

- James E. Westcott, *Photographer-Editor*
Phone: (301) 973-5477
- Jon Fogel, *T.V.-Radio Specialist*
Phone: (301) 973-4483

ACTIVITIES: This branch plans and carries out film, TV, radio and still picture projects to ad-

vance specific Commission Programs, and acts as advisor to Commission and contractor personnel in Washington and nationwide or audio-visual problems and projects. In 1969, 16 films were produced by the Commission and its contractors; about 12 films are planned for 1970. In addition, TV clips and radio platters and tapes are produced by the Commission and contractors every year. This branch also places Commission- and contractor-produced motion pictures into loan and commercial sales channels, determines the content of the 10 domestic and 9 overseas film libraries, and issues a combined Information - Education and Professional - Technical film catalog.

FACILITIES: AEC has no motion picture production facility or motion picture laboratory, but uses Government and/or commercial services. **DISTRIBUTION:** AEC operates an 8,000 still photo library, is setting up a 35mm color slide library, and distributes 11,100 16mm prints through 10 domestic film libraries which cover particular geographical areas. All films are for free-loan. Each library has about 320 titles (education-information, technical-professional, and historical). The Commission also has four overseas libraries at its offices at the U.S. Embassies at London, Brussels, Tokyo and Buenos Aires, stocked with educational and technical films, and also supplies films to the film library of the International Atomic Energy Agency in Vienna, The American Film Library, The Hague, Holland, The Puerto Rico Nuclear Center, and to USIS-Stockholm for use throughout Scandinavia. The Brussels and Buenos Aires libraries have about 80 films each in French and Spanish respectively. Information on libraries available from Washington office.

STOCK FOOTAGE: Color stock footage is also available from any of the completed documentary films produced by or sponsored by the government. Films may be borrowed from libraries in geographical areas for footage counts prior to purchase of duplicating materials from the various laboratories holding the originals. Unedited stock film footage in black-and-white and color on nuclear or thermo-nuclear detonations sold at Lookout Mountain Air Force Station, USAF, 8935 Wonderland Avenue, Hollywood, California 90046. The Commission has more than 120,000 feet of 35mm black-and-white unedited film footage on peacetime uses of atomic energy available for purchase. Information may be obtained from Washington office.

**DEPARTMENT OF COMMERCE
Washington, D. C. 20230**

• The U.S. Department of Commerce produces and circulates motion pictures dealing with those domestic and foreign subjects relating to the offices under the jurisdiction of this Department.

Business & Defense Service Administration

Saul Padwo, *Director*
Scientific, Photographic and Business
Equipment Division

Earl Young, *Motion Picture Analyst, Motion*
Picture & Photographic Products Branch
Phone: 967-2911

• The Motion Picture and Photographic Products Branch of this Division serves the motion picture, photographic, and audio-visual equipment and supplies industries. Its primary function is to foster, promote, and develop the foreign and domestic trade of these industries. It provides market development counsel to producers and exporters on where and how to cultivate and expand their sales. It participates in tariff and trade negotiations, maintains information on foreign trade trends, and periodically issues basic trade statistics on U.S. exports and imports of photographic goods. The

Test-fly our new movie projector.

It goes up airplane passenger ramps.

And under airplane passenger seats.

Turn it into a theater and insert your company.

Push one button for instant image, sound and attention.

Introducing the Fairchild Seventy-21, our new portable, pop-up Super 8 Sound showroom.

We built it to go where you go. For the new businessmen who don't have time to waste waiting at baggage counters.

And we built it for audiences who are too busy to watch a projector being threaded. (The MoviePak[®] cartridge eliminates the problem. As well as the need for rewinding)

Your public isn't too busy to be entertained, though. We've proven that over the years. With movies for selling. For training. Or even for recruiting.

One final word. The Seventy-21 has been engineered to meet all of the standards for 8mm's future.

Super 8 film, with a +18 image-to-sound separation. And with magnetic sound striping.

What does this mean to you?

Among other things, that existing 16 and 35mm programs, as well as videotapes, can be converted for use in the Super 8 MoviePak.

And that magnetic sound tracks can always be updated or even added to silent films.

Write or call for all the information on the newest in communications technology. And if you're in a hurry to get the show on the road, ask for one of our famous 2 second demonstrations.

We'll have someone from our nationwide dealer network give you a screen test.

Environmental Science Services Administration (ESSA)

Stanley B. Eames, *Director of Public Information*
George A. (Jeff) Baker, *Radio/TV/Film Officer*
Phone: (301) 496-8243

• ESSA's centralized film development office within the Office of Public Information administers and supervises production of informational and educational films for all components of the Agency. Film and tape spots, short and special features for both radio and TV are also under the direction of this office.

ESSA's film library now combines film formerly distributed by the U.S. Weather Bureau, the U.S. Coast Guard and Geodetic Survey, and the Ionospheric Propagation Laboratory of the Bureau of Standards. Distribution of these films is handled by Modern Talking Picture Service, and requests should be directed to them.

Inquiries about ESSA film, radio and TV activities should be directed to: Environmental Science Services Administration, U.S. Department of Commerce, Washington Science Center, 6010 Executive Blvd., Rockville, Md. 20852. Attention: PI.

DEPARTMENT OF DEFENSE

Office of Public Affairs Directorate for
Defense Information — Audio-Visual Division
The Pentagon, Washington, D.C. 20301

• This Division of the central Armed Forces contact for news media and producers in the important fields of radio, television, still pictures and motion pictures. Direct contacts on national and international release matters in these fields are:

Norman T. Hatch, *Chief, Audio-Visual Division*
Phone: OXford 7-4162
Donald E. Baruch, *Chief, Motion Picture Productions Branch*
Phone: OXford 7-4596
Russell W. Wagner, *Chief, Radio-Television Productions Branch*
Phone: OXford 5-0168
Lt. Col. Jack R. Olsen, USAF, *Chief, Audio-Visual News Branch*
Phone: OXford 7-6161

ACTIVITIES: The Audio-Visual Productions Branch approves release of Armed Forces stock footage which cannot be procured commercially and assists studio motion picture and independent producers in the production of entertainment and documentary films and theatrical productions relating to the Armed Forces. Information on Armed Forces films available for public non-profit showing or cleared for public service TV programs can be obtained from the Branch.

The Radio Television Productions Branch approves release of Armed Forces stock footage which cannot be procured commercially and assists network and independent producers in the production of documentary and entertainment programs related to the Armed Forces.

The Audio-Visual News Branch releases approximately 200 (2-3 minute) subjects to the TV and theatrical newsfilm media annually. I maintains two small Pentagon studios for servicing the news media and radio programs which feature interviews with top Defense officials. It also releases taped and filmed messages by Secretaries and Service Chiefs and provides ad

Medium Hot!

Been to the movies lately? If so, chances are you may have seen a sponsored short along with the main feature. Increasingly sponsors are using the big screen medium to reach big audiences. It's got a lot going for it, too. Arc-bright projection. Hi-fi sound. Plush surroundings. And people—in large numbers. It's a prestigious showcasing for sponsored films and one that is attracting considerable interest these days. A recent front-page story in *The Wall Street Journal* was headlined, "What's at the Bijou? Many Movie Shorts Have Soft-Sell Pitch."

We've put out a booklet that answers many of the questions sponsors and producers have asked about theatrical distribution. We'll be happy to send you a copy and—if you like—screen your film and evaluate its theater potential. Medium hot? And getting hotter all the time!

vice and guidance to radio and TV news producers. The Branch also releases to the press and TV media approximately 2,000 photographs each year.

DEPARTMENT OF DEFENSE

Defense Supply Agency: DSA Administrative Support Center

Technical Presentations Division
Cameron Station, Alexandria, Virginia

• Technical Presentations Division, DSA Administrative Support Center, is the technical source and point of contact for the production of films for the Defense Supply Agency. DSA's headquarters staff at Cameron Station and 25 primary level field activities furnish technical information for the films. The projects are aligned with the primary objective of the agency, mainly, to provide effective logistic support of the operating forces of all Military Services in war and peace.

ACTIVITIES: This division carries out a wide variety of activities, including audio-visual communications, motion picture productions, technical and informational exhibits, still picture photography, and graphic presentations. The range of in-house staffing allows the division to contribute materially to the production of DSA films.

FACILITIES: DSA has no motion picture production facility or motion picture laboratory, but uses Government and/or commercial services. The key personnel of Technical Presentations Division is as follows:

Chief, Morris S. Namkin
Phone: (202) OX4-6075
Deputy, Mary E. Kennedy

Phone: (202) OX4-6077
Adm. Officer, Robert W. Henderson
Phone: (202) OX4-6185

Washington, D.C. 20305

Morris M. Goldberg, Chief, Medical Illustration Service
Phone: (202) 576-2866
John A. Ey, Jr., Asst. Chief, Medical Illustration Service
Phone: (202) 576-2867
James N. Young, Chief, Training Aids Division
Phone: (202) 576-2865
Miss Daisy B. Howze, Chief, Audio-Visual Support Center
Phone: (202) 576-2864

ACTIVITIES: This Institute makes or supervises films for the Armed Forces on medical subjects.

FACILITIES: In-house capability, and contracts through Office of the Chief, Communication-Electronics.

DISTRIBUTION: AFIP operates a U.S. Army Audio-Visual Support Center for medical films. The Institute procures and loans films for the Medical Services of the Armed Forces. Unclassified films are available to members of the medical profession, with borrowers paying return postage. For information about available films, write the Superintendent of Documents, Government Printing Office, Washington, D.C.

20402 and refer to *The Film Reference Guide for Medicine and Allied Sciences*.

DEPARTMENT OF THE AIR FORCE

The Pentagon, Washington, D.C.

• The U.S. Air Force produces approximately 400-500 reels of film each year by contract with commercial producers or in-service. These films are used by all levels of management for education, training and informational briefings.

ACTIVITIES: Headquarters, USAF at the Pentagon, Washington, D.C. The management focal point within the Air Staff for all photographic and closed circuit television policy is the Audio-Visual Systems Division, Directorate of Operations. Complete address is:

Hq. U.S. Air Force
AFXOTV
Washington, D.C. 20330
Phone: OXFord 5-2830

Col. James P. Warndorf is chief of the division. The office is responsible for determining or validating requirements for all Air Force motion pictures and insuring that the capability exists within the Air Force to either procure them by contract or produce them in-service. In this respect, they monitor the Aerospace Audio Visual Service, a technical service under the Military Airlift Command.

In charge of the program at the Military Airlift Command Hq. is Lt. Col. Robert J. Arblaster. Complete address is: Hq. MAC (MAXPDV), Scott AFB, Ill. 62225. The Aerospace Audio-Visual Service is directly responsible for producing or procuring films, adequate photographic documentation of the total Air Force mission and distribution of release prints. The complete address is: Aerospace Audio-Visual Service, Norton AFB, Calif. 92409. Col. William E. Nix is the Commander. Specific information concerning the service of AAVS or its

Why are filmmakers switching to CINE 60's POWER BELT?

* Because

CINE 60 OFFERS YOU THE MOST ADVANCED CONCEPT IN BATTERY DESIGN

- Rechargeable Nickel Cadmium Batteries built into a handsome easy to wear belt.
- Completely sealed battery cells, maintenance free.
- Built-in charger and coiled charging cable.
- Automatic overload switch for protection against short circuit. This switch functions as an automatic fuse, which will reset automatically and will never have to be replaced.

®U.S. Patent #3274476

Belt shown above is:
UNIVERSAL POWER BELT
with 8.4V-12V-16.8 Volt Output

- No awkward battery case to get in your way.
- No bulky weight tugging at your shoulder.
- Designed for comfort and mobility.
- There is a belt for each professional camera ranging in voltage from 6 to 30 volts.
- We also make a powerbelt, 30 volt, for the Sylvania professional sungun.

commercially produced motion pictures may be obtained from: AAVS (AVODC), Norton AFB, Calif. 92409. Phone: (714) 382-2673.

FACILITIES: Complete motion picture production facilities are located at the Audio-Visual Center, Norton AFB, Calif. A television production capability is to be completed in the near future.

AAVS is responsible for contract procurement and commercial production of U.S. Air Force films. The USAF Motion Picture Film Depository, a film archive housing historical and current films, is also located in the Audio-Visual Center.

The AAVS is documenting Air Force activities worldwide through a unit in Southeast Asia and widely dispersed photographic flights and detachments. It is also providing audio-visual services to a number of Air Force major commands and agencies around the globe, operating optical instrumentation systems, television production systems, gun and strike camera systems on fighter aircraft, and base support photographic laboratories.

Specific information regarding the Commercial Production of Air Force films may be obtained by contacting:

Hq AAVS (AVODOMC)
Norton AFB, Calif. 92409
Phone: (714) 382-2350

DISTRIBUTION: Approved Air Force films, filmstrips and related visual aids are distributed by the Aerospace Audio-Visual Service (MAC) through the film library of the Audio-Visual

Center. This facility routinely distributes 360,000 films per year to Air Force units and other agencies all over the world. The present active inventory consists of nearly one-half million prints of more than 6,000 separate film subjects. The Film Library also maintains overseas central Film Libraries located in Germany, Panama, Japan and Alaska, with a Branch Film Library in the United Kingdom. These libraries are strategically placed and stocked to service approximately 140 Base Film Libraries located through the world. Information regarding distribution of these films can be obtained by contacting:

Hq AAVS (AVOAS)
Norton AFB, Calif. 92409
Phone: (714) 382-3255

DEPARTMENT OF THE ARMY Washington, D.C. 20315

The Assistant Chief of Staff for Communications-Electronics of the Army is responsible for coordination, review and supervision of all audio-visual activities to include motion picture and still photography, television and electronic display. FACILITIES: The U.S. Naval Photographic Center, a field activity of the Naval Air Systems Command, is the central photographic laboratory for the Navy Department and the Navy's largest photographic activity. The Center, composed of about 550 military and civilian personnel, provides photographic assistance and specialized services to the entire Naval Establishment, supervises the production of Navy training films and maintains the Navy's motion picture and still photographic film libraries and motion picture distribution division.

The motion picture production facilities at the Center are modern and complete. There is a sound stage, film and tape recording and mixing equipment, an art and animation group and editorial branch. Here experienced script writers and artists collaborate with Navy photographers and technicians, maintaining high standards of quality for Navy productions. The processing division has the capability to develop and print negative film and release prints in 35mm and 16mm black-and-white and negative-positive color. About 75 percent of all Navy films, however are contracted with established commercial producers.

In addition, there is a growing requirement for films to report on the Navy's research and development activity. To meet this need, a TV closed circuit kinescope facility has been installed. Two video tape recorders and kine-

recorders together with visomat processing make for rapid completion of urgent films.

Extensive libraries of both still and motion picture photography are maintained at the Center. Library services are provided to the Naval Establishment, other government agencies and to commercial concerns on a cash sale basis. The Still Picture Department produces all types of still photography such as press, serials, murals, and official portraits. Modern continuous roll paper printing and processing units meet the Navy's large volume print demands. There are also complete negative, positive and transparency color processing facilities.

A research and development group conducts tests, experimentations, development and evaluation of photographic equipment. Here, technical photographic specifications, instructions and other publications are also prepared. Information about NPC may be obtained from: Commanding Officer, Naval Photographic Center, U.S. Naval Station, Washington D.C. 20390

The National Audiovisual Center, a Division of the National Archives and Record Service, General Services Administration, provides four main services:

1. INFORMATION. The Center is the main contact with the public and the Federal Government regarding audiovisual materials available from Federal agencies and where and how they can be obtained. Detailed information is gathered on all relevant materials and is made available on request.

2. SALES. The Center functions as the central sales point for most completed audiovisual materials produced by the Federal Government. Over 3,000 motion pictures and film strips are listed in a sales catalog available from the Center.

3. DISTRIBUTION. The Center provides a uniform, efficient and economic loan service of audiovisual materials, primarily 16mm motion pictures, deposited in the Center by various Federal Government agencies.

4. TECHNICAL ASSISTANCE. The Center develops and monitors basic ordering agreements covering production services, distribution services and other audiovisual

Announcing the other half of your slide projector.

The half you hear.

The half that lifts any slide presentation out of the ho-hum class. With music. Sound effects. With carefully chosen, fluff-free words.

Our new Sound-O-Matic* I programmer-recorder works with just about any standard automatic remotely controlled slide projector to give you up to 60 minutes' worth of synchronized sound. It lets you prepare your audio-visual slide presentations ahead of time, then sit back and join your audience. Or better yet, watch their reaction to the show.

All you do is record the sound portion and program slide advances on pop-in, pop-out cassettes. Erase, if you want. Change, if you want. Teach, sell, or train more effectively than ever before. (And take it home on weekends, just for fun.)

Send the coupon for details, or ask for a live demonstration that speaks for itself.

services desired by the Federal Agencies. It also provides on request to other Federal Agencies limited technical assistance relating to such audiovisual services.

AUDIOVISUAL BRANCH OFFICE OF THE NATIONAL ARCHIVES

James W. Moore, *Chief*
The Audiovisual Branch, Office of the National Archives, National Archives and Records Service, General Services Administration is the repository for more than 60 million feet of historical motion pictures created by 100 Federal agencies and non-government producers. The ever-growing collection includes a wide range of subjects covering the period from 1896 to the present.

Films are not loaned, but may be viewed by researchers, film producers, or their authorized representatives. Duplicate negatives or masters of films or scenes may be purchased by individuals or producing companies subject to consent of the depositing agencies and copyright restrictions, if any.

U. S. DEPARTMENT OF HEALTH EDUCATION AND WELFARE Washington, D. C. 20202

Dr. Andrew R. Molnar, *Chief, Institutional Materials and Practices Branch*, Division of Higher Education Research, Bureau of Research, U.S. Office of Education, 400 Maryland Avenue, S.W., Washington, D.C. 20202 Phone: (202) 963-5963

The Institutional Materials and Practices Branch supports promising media-related projects.

Media Services and Captioned Film for the Deaf

Phone: (202) 963-5925

Dr. Frank B. Withrow, *Acting Director, Division of Educational Services*

Phone: (202) 962-5022

Dr. John A. Gough, *Chief, Media Services and Captioned Films*

Phone: (202) 963-3060

• The Media Services and Captioned Film Branch administers a program of educational media under P. L. 85-905, as amended by P. L. 87-715 and P. L. 89-258. These laws provide for promoting the general welfare and the educational advancement of deaf persons. Media Services and Captioned Films furnishes a free loan service of films for the deaf; conducts research in the use of films and other educational media for the deaf; produces and distributes films, filmstrips and related media for the deaf and for persons who work closely with the deaf (parents, employers, etc.). The branch also provides for the training of persons in the utilization of these materials and provides media equipment to most schools for the deaf.

Further expansion to provide media services to all types of the handicapped was made possible by enactment of P.L. 90-247. Actual program activities remained essentially the same as in previous years since no funds were appropriated for the expansion of the program.

UNITED STATES PUBLIC HEALTH SERVICE NATIONAL MEDICAL AUDIOVISUAL CENTER

Atlanta, Georgia 30333

All Phones: (404) 633-3351

Dr. James Lieberman, *Director*

Edward F. McClellan, *Deputy Director*

Jerome K. Barnett, *Ass't Director for Operations*

Joseph A. Staton, *Special Projects Officer*

Dr. Henry D. Abraham, *Associate in Biomedical Communication*

Katherine C. Skogstad, *Information and Publications Officer*

Jack C. Kirkland, *Chief, Production Branch*

Dr. Norman L. Cole, *Acting Chief, Educational Systems & Development Branch*

Robert Sumpter, *Chief, Acquisition, Distribution, and Reference Branch*

ACTIVITIES: The National Medical Audiovisual Center plans, directs, conducts and coordinates a national program in biomedical communication. It is the central installation in the Public Health Service for development, production, distribution, evaluation and utilization of motion pictures, videotapes, and other audio-visual forms.

Through its professional education program, the Center, through a newly established educational program, provides consultation and assistance to schools of the health professions, and is responsible for the development of specialized conferences, seminars and workshops. A recently established audiovisual systems planning activity concerns itself with the development of communications systems in a wide variety of health and health-related institutions.

Under the leadership of the School of Medicine at Tulane University, the Center participates in a graduate program in biomedical communication designed to provide a cadre of trained audio-visual specialists to work with schools of the medical/health professions. The curriculum was developed through a consortium of institutions of higher learning in 1967.

The Community Medical Television System, the nation's first medical network on the 2500 megaHertzian instructional bandwidth, began operation in Spring of 1967, under NMAC's leadership and coordination. It linked initially, with line-of-sight transmitters, Emory University Medical School and Hospital; Grady Memorial Hospital, Emory's teaching hospital; the Georgia Department of Public Health and its Mental Health Institute; the Veterans Administration Hospital and the Audiovisual Center. Programs are transmitted from Grady and the Center and received by others hooked into the network. The System could serve as a prototype for others of its kind throughout the nation. Operation of the system became a project of the Georgia Regional Medical Program in 1968 and now includes 24 institutions.

FACILITIES: The Center is housed in a four-story building designed especially for audiovisual activities. In a two-story annex, it maintains the International Index of Medical Film Data, a collection of information on some 25,000 audiovisuals; acquires, prints and distributes medical and health-related films, makes multiple prints and distributes them throughout the world, operates the National Archives of Medical Motion Pictures.

DISTRIBUTION: Public Health Service films are available from National Medical Audiovisual Center (Annex), Station K, Atlanta, Georgia 30324, on loan to schools of the health professions, other medical/health institutions and organizations throughout the U.S. Films are listed in the National Medical Audiovisual Center Catalog.

REFERENCE SOURCES: In addition to the National Medical Audiovisual Center Catalog, the Center also compiles and publishes the *Film Reference Guide for Medicine and Allied Sciences* and other listings in specialty areas of the biomedical sciences. Special catalogs are available in mental health; heart disease, cancer and stroke; mental retardation; and organ transplant. Information from the International Index of Medical Film Data supports special request for film information not otherwise available.

PRODUCTIONS AVAILABLE: New productions available from NMAC include: *Cholera: Part II: Practical Laboratory Diagnosis*; *Stop Rubella*, with an introduction and ending by the cast of the television show *Julia*, to be used in the national campaign against rubella; a series of films showing techniques in rehabilitation medicine; and several television film recordings of a series of discussions on concepts and controversies in modern medicine.

A Slide series, *Basis of Diagnosis of Peripheral Nerve Injuries*, is available for instruction in medical schools and uses a combination of artwork and still photography to teach physiology of the human nerve network.

The publication, *Assistive Devices For The Handicapped*, has been completed and is available from the American Rehabilitation Foundation in Minneapolis, Minnesota. *Toward Improved Learning*, Volume II, has been released and is available from the Educational Systems and Development Branch, NMAC.

Social Security Administration

Baltimore, Maryland 21235

Phone: 944-5000 ext. 2187

Robert T. Fenwick, *Chief, Audio-Visual*

Branch, Office of Information

Phone: 944-5000, ext. 5587

ACTIVITIES: The Social Security Administration produces and distributes films on Old Age, Survivors, and Disability Insurance, and on Health Insurance (Medicare). These are public information films designed to explain to the viewer what he needs to know about the social security law and what benefits he might be entitled

to. Most films and spots are intended for both television and theatrical use.

FACILITIES: The Administration has a small studio and limited facilities located in the Baltimore Headquarters Building. Some film work is contracted to commercial producers.

DISTRIBUTION: Through 800 District and Branch offices throughout the country, prints may be obtained on a free loan basis. Prints may also be bought.

DEPARTMENT OF THE INTERIOR

Washington, D.C. 20240

• The Department of Interior produces films which are concerned with the management, conservation and development of natural resources in every section of the Nation. Films are available from the bureau in which they have been produced.

Office of the Secretary

Harmon Kallman, *Office of Information*

Phone: (202) 343-3171

Inquiries concerning the use of Department of Interior films for television should be addressed to this office. A Department film catalog is available on request.

The Bureau of Land Management

John A. Mattoon, *Chief, Office of Information*

Phone: (202) 343-3609

• Two films are available from the Bureau's office including the award-winning new film *The Last Frontier*, a 29-minute film about America's last public domain lands, their history and future.

Others available for loan and for TV showings are: *This Waiting Land*, a 27-minute color film, which contrasts pioneering a century ago with present day multiple use resources management, and *The Last Frontier*. State BLM offices having libraries are: Portland, Sacramento, Phoenix, Reno, Salt Lake City, Santa

Fe, Denver, Cheyenne, Boise, Billings, and Anchorage.

The U. S. Bureau of Mines

Dr. A. Nicholas Vardac, *Officer-in-Charge, Audio-Visual Programs, Motion Picture Development and Production* Bureau of Mines, Washington, D.C. 20240

Phone: 202-343-3359

ACTIVITIES: The Bureau of Mines has a broad film program dating from about 1920. Motion picture subjects deal with natural resources of states and areas and with mineral commodities including metals, non-metals and petroleum. Recently released films include: *Helium, Aluminum - Metal of Many Faces, Nevada and Its Natural Resources, Steelmaking Today, the Extraordinary World of Zinc, The Lead Matrix, Silver, Wealth of the Wasteland, More Fire Control, First Aid Now* and *Tennessee and Its Natural Resources. Oregon and Its Natural Resources.*

FACILITIES: All films are made in cooperation with private industrial firms which pay production costs and select commercial film producers. The Bureau maintains no production facilities.

DISTRIBUTION: About 9,000 prints of films are distributed to the public on a free loan basis from the film distribution center of the Bureau of Mines, 4800 Forbes Ave., Pittsburgh, Pa. 15213, and from depositories in 40 states. Annual number of showings is 240,000. Most films are cleared for free TV use. Single or block bookings arranged. Catalogs available.

PRODUCTIONS: Currently in production are films on *Molybdenum, the Modern Refractory, Pennsylvania And Its Natural Resources* and *Mineral Resource Research and Development.*

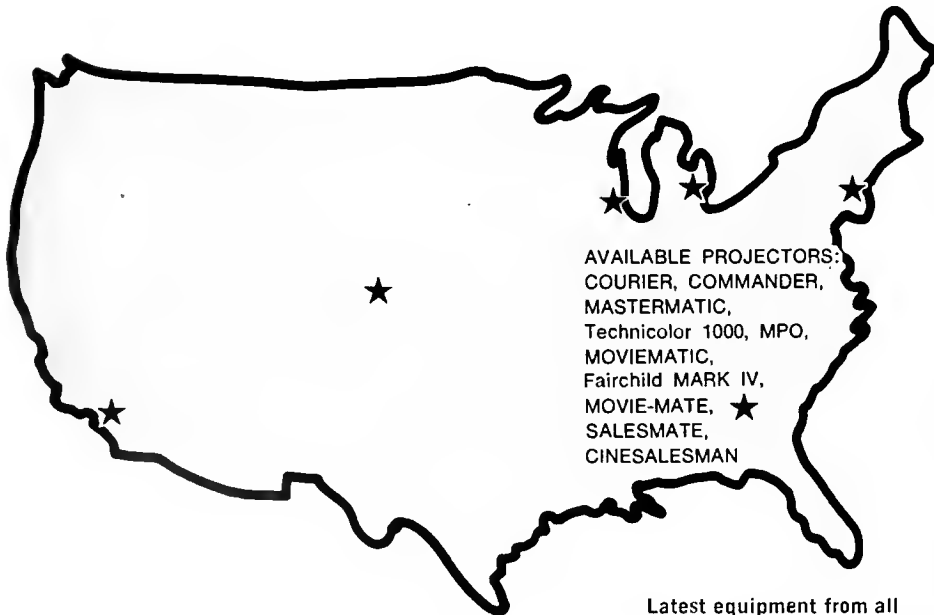

The Bureau of Reclamation

Ottis Peterson, *Assistant to the Commissioner, Information*

continued

Phone: (202) 343-4662

ACTIVITIES: The Bureau of Reclamation produces one or two pictures a year on water resource development in the seventeen western states - usually "low budget" sound-color films which run 14 or 28 minutes. Film catalogs are available from the Washington, D.C., office of the Bureau; the Regional offices and the Film Distribution Center in Denver.

FACILITIES: Most of the film work for the Bureau of Reclamation is contracted by the appropriate Regional office with commercial producers. There are seven Regional offices, all in the western states, supervised by the Washington office.

DISTRIBUTION: Distribution of Bureau of Reclamation films is accomplished through the Film Distribution Center, Bureau of Reclamation, Bldg. 67, Denver Federal Center, Denver, Colorado 80225. On occasion, surplus prints are loaned to educational institutions for their distribution libraries.

U. S. Fish & Wildlife Service

Elliot A. Macklow, *Chief, Audio-Visual Services*, Branch of Marketing, Bureau of Commercial Fisheries, Fish & Wildlife Service. Phone: (202) 343-6897

ACTIVITIES: Using commercial contractual motion picture facilities, this organizational unit plans, produces and distributes fishery marketing and educational motion pictures sponsored by both Government and industry. Other audio-visual materials such as fishery television spot announcements and radio spot announcement discs and are also produced and distributed.

FACILITIES: Commercial contractual motion picture facilities.

DISTRIBUTION: Utilizing about 200 Government

and private film libraries, 26 fishery motion pictures are distributed free of charge upon request. Provision has been made so that most of the films are cleared for television, although special permission is required before telecasting. Stock footage is not available. A catalog listing the commercial fisheries films distributed and the instructions for obtaining them may be obtained free of charge upon request. A central Audio-Visual Services film library is maintained. Films and information may be obtained by writing Audio Visual Services, Bureau of Commercial Fisheries, 1815 N. Ft. Myer Drive, Room 601, Arlington, Va., 22209. Requests for films to be sent outside the U.S. should be made to the nearest U. S. Embassy or Consulate. Applications are accepted from institutions wishing to serve as non-profit film libraries.

PRODUCTIONS: The following motion pictures are the latest added to the film library system: *Flavor of Maine*, sponsored by the Maine Sardine Council; *Trout USA*, for the U.S. Trout Farmers Association; *Mullet Country*, sponsored by the Florida Board of Conservation; *Estuarine Heritage* and *The Biologist and the Foy*, both produced for the five states bordering the Gulf of Mexico, comprising the Gulf States Marine Fisheries Commission. Two new films in production, *That Florida Flavor*; *Alaska Salmon*.

The U. S. Geological Survey

Frank H. Forrester, *Information Officer*
Phones: (202) 343-4646 4647

• This office maintains and distributes a limited collection of motion picture films dealing with the earth sciences. Of major interest are the award winning films, *The Eruption of Kilauea, 1959-60* and the earlier film release, *The 1955 Eruption of Kilauea*. These show, at close range, the spectacular eruption of the Kilauea volcano on the island of Hawaii.

Recent film releases include the *Alaskan*

Earthquake, 1964 and The Sea River. The first of these films documents the destructive effects of the March 27, 1964, Alaskan earthquake both graphically and pictorially in on-the-spot scenes. The *Sea River* film records hydrological investigations carried on in the Amazon River Basin as a joint operation between the Geological Survey and the Brazilian Navy.

Requests for additional information about these and other films should be addressed to the Information Office, U.S. Geological Survey, Washington, D.C. 20242.

ographical data and a small study center for research.

The Library's Copyright Office has registered claims to copyright for motion pictures since 1894, when the first examples of this medium were deposited in the Library in the form of photographic paper prints; since 1912 the copyright law has provided for the registration and deposit of motion pictures as such. Generally, under the provisions of the motion-picture copyright agreement between the Library of Congress and the copyright proprietors, the films are returned to the proprietor by the Library after registration, but the Library has the right to claim the deposit for its collections later.

The Copyright Cataloging Division of the Copyright Office prepares a semi-annual *Catalog of Copyright Entries: Motion Pictures and Filmstrips*, which lists all such materials registered for copyright in the United States and which is published by the Library and sold by the Government Printing Office. It has also prepared four cumulative catalogs entitled *Motion Pictures*, which together cover registrations of films for the years 1894-1959 and which are for sale by the Government Printing Office.

In addition, the Library's Descriptive and Subject Cataloging Divisions catalog educational films, using data submitted largely by producers and distributors, and the Library publishes this cataloging information in two useful forms for purchase by other libraries or individuals. One form is the printed catalog card, which any filmmaker may purchase to establish his own card-catalog for the control of his collection and for the dissemination of film information. The other is a book-catalog reproduced photographically from the printed cards and containing a detailed subject-index, adequately cross-indexed; entitled *Library of Congress Catalog - Motion Pictures*

and *Film-Strips*, this publication is issued quarterly and in annual cumulation, and it also appears as volume in the quinquennial cumulation of the Library's *National Union Catalog*. Both the printed catalog cards and the book-catalog may be purchased from the Card Division, Library of Congress, Building 159, Navy yard Annex, Washington, D.C. 20541.

The Library's collection of motion pictures comprises about 90,000 reels and is in the custody of the Prints and Photographs Division in the Reference Department. It is primarily an archive in nature, and reference service is provided to assist research activities. The Library does not lend motion pictures, but some films may be copied under certain conditions; copying requires the signing of a standard agreement concerning the clearance of copyright and the copying of equivalent footage for the Library.

AREA CODE 214 • TAYlor 3-8158

My film distributor, the matchmaker.

That's what DuPont calls us. And they should know.

Our Selective Distribution is matching their film to the specialized audience they want. The case in point: "Good Hand, Good Eye" was made to reach and encourage high school and vocational students, recently separated veterans, and high school graduates. The aim was to recruit them for a business that needed them. The auto paint and body refinish industry.

We are promoting the film to guidance and career counselors in high schools around the country. We are sending out mailings to neighborhood recruitment centers and social service agencies. We are using our own personal contacts through the American Personnel and Guidance Association. And we are getting them an audience of potential autobody craftsmen.

The Refinish Division of DuPont is receiving continuing responses from their target audience, with referrals to local body shops all over the country. Because their film is not just being shown. But it is being shown to the people for whom it was meant.

Of course, there's a moral to the story. Chances are, the film you made is also for a special audience. Come to Sterling and let our Selective Distribution plan get it for you. Want community leaders? A predominantly female audience? Businessmen? Teen-agers? You name them, and we'll get them for you.

What we did for DuPont we can do for you. We'll match you the perfect match.

John A. Nugent, *Chief, Motion Picture and TV Branch, HQ-450*

Martin Konigmacher, *Senior Production Supervisor*

Jerry Ward, *Producer-Director*

George Mathieu, *Project Coordinator*

ACTIVITIES: The Motion Picture and TV Branch produces motion pictures and television programs designed to meet the needs of the Services and Offices which comprise the Federal Aviation Administration.

FACILITIES: The FAA uses both in-service capabilities and commercial contracts with industry in supplying its motion picture services.

FILM DISTRIBUTION: Distribution of FAA films is handled through the Aeronautical Center

Film Library, AC-921, P.O. Box 25082, Oklahoma City, Oklahoma 73125.

PRODUCTIONS: Among the recent releases are: *Safety by the Numbers*; *Plane Sense*; *Stable and Safe*; *The Inspectors*; *Airports In Perspective* and three films for the Paris Air Show.

Federal Highway Administration

William F. Hall, *Chief, Photographic Section*
Phone: WOrth 7-3013

ACTIVITIES: This Bureau produces films on subjects pertinent to highway development, safety and related subjects, sometimes in cooperation with other government agencies, state and local highway departments, and other interested organizations.

FACILITIES: In-house capacity.

DISTRIBUTION: These films are available on a loan basis, with borrower paying return transportation, from Chief, Photographic Section, Federal Highway Administration, Washington, D.C. 20591. Films may be purchased by responsible organizations, by inquiry to same address.

United States Coast Guard

Washington, D.C. 20591

Phone: (202) WOrth 4-5303

H. E. Whitwer, *Chief, Motion Picture & TV Branch, Public Information Division*

ACTIVITIES: The U. S. Coast Guard produces information and training, as well as recruiting films. The majority are in 16mm color-sound with running time of 3 to 28 minutes. Coast Guard films have consistently been selected by the United States government for entry in foreign film festivals, and have won a number of awards.

FACILITIES: In-house capability. The Coast Guard has limited in-house writing, directing, shooting and editorial capability. Additional pro-

duction services as well as all processing and printing are contracted for as required.

DISTRIBUTION: A catalog of U.S. Coast Guard films is distributed by film libraries in Washington, D. C. and at District offices in Boston, New York, Portsmouth, Miami, New Orleans, St. Louis, Long Beach, San Francisco, Seattle, Juneau and Honolulu.

PRODUCTIONS: Current productions include training films, public information films and TV spots.

U. S. TREASURY DEPARTMENT

Washington, D.C. 20025

• A recently-revised version of a 28-minute film, *The Treasury Story* reviews the activities of this Department. A five-minute summary version is also available for use in continuous automatic projectors.

Internal Revenue Service

Phillip S. Horne, *Training Production*

Coordinator, Phone: (703) 557-2933

Charles M. Lammond, *Visual Information*

Officer, Office of Public Information.

Phone: WOrth 4-4037

ACTIVITIES: Films for public and internal use are prepared by the Internal Revenue Service. Motion pictures for public viewing are produced by the Public Information Division, those for employee training or orientation by the Training Division. The Training Division also produces filmstrips, slide/tape programs and videotapes for internal use. The Information Division also supervises production of television spot announcements for use during each tax filing period. It has also recently begun the production of films in Spanish, partly to extend its taxpayer information in the U.S. and partly as an advisory aid to Latin American countries concerned with Federal government cooperative programs.

now you can afford custom-made color films

Custom-produced color motion pictures, integrated into straight-talking meetings that communicate—hold the attention of employees, inspire them to participate and become involved—and motivate them to learn, retain and put their knowledge to practical use.

That's what we offer. And that's what companies like **Pepsi-Cola**, **AT&T**, **Metropolitan Life** and **S&H Green Stamps** have bought from us. In all probability you, too, can afford our programs.

The Secret is videotape. But not the amateur quality "CCTV" black & white tapes you have seen.

We write and produce imaginative, high-band broadcast quality 2-inch color videotapes in professional studios. Then we transfer to 16mm or 8mm color motion picture film. Show it on any standard projector—order as many prints as you need.

You get all the advantages of videotape: low cost; "instant replay" (if it's not right, we tape it over); simultaneous editing; and a variety of visual effects that add clarity, impact and interest (split screen, picture inset, slow motion, type super, special effects, dissolves, wipes, etc.) . . .

And "Chroma Key," where we combine "live" actors in the studio with 35mm background slides, artwork or photos and make it appear as though they are actually at the locale shown (a retail store, factory, office, exterior, foreign country, imaginary setting, etc.).

If you like, we'll also help plan your program—even write and produce meeting guides and workbooks (as we've done for Pepsi and S&H). Call or write for further information, screenings, prices, etc.

government . . .

continued

FACILITIES: The public information films of Internal Revenue Service are produced professionally, usually utilizing the agency's own office facilities and personnel for background scenes but hiring professional talent for action bits, narration, etc. Laboratory production facilities are contracted to complete the film after the first rough cut. Training films are sometimes produced with Internal Revenue Service personnel and sometimes with professional talent. Production and laboratory facilities for some training programs are also contracted.

DISTRIBUTION: The 58 district offices, and several of the larger local offices, distribute Internal Revenue Service film productions. All clearances and releases have been obtained for general showing of Internal Revenue Service films.

PRODUCTIONS: The Public Information Division has prepared a new ½-hour film production featuring Dennis James to inform taxpayers about 1969 developments in filing their federal income tax returns. In addition to this 16mm color production, it also has released a 20-minute, 16mm color combination historical and informational film, *Mission for Millions*, which will give taxpayer viewers an insight into actual operations of Internal Revenue Service offices of all types. A 10-minute film, *Right on the Button*, describes the ADP — automatic data processing — of tax returns, from the standpoint of taxpayer interest.

U. S. Savings Bond Division

Treasury Department

Jacob Mogelev, *Promotion Manager, U.S. Savings Bonds*
Phone: (202) WOrth 4-5702

- A variety of films telling the story of U.S. Savings Bonds is available suitable for community audiences of all kinds. Many are inspirational, some humorous, some informational. They were made available to the Treasury through the generosity of patriotic volunteers. Their showings take place under volunteer auspices as well. *The Land We Love*, 16mm, sound-color, 23 min., cleared for television. *24 Hours in Tyrantland*, 16mm, sound-black and white, 30 min., television rights by special arrangement only. *Grampa's Inheritance*, 16mm, sound, black and white, 16 min., television rights by special arrangement only. *Star Spangled Salesman*, 16mm, sound, color, 20 min., not for television. *Riley — Savings Bonds Salesman*, 16mm, sound, black and white, 19½ min., television rights by special arrangement only. *Wilbur Gets the Message . . . About Payroll Savings*, 16mm, sound, black and white, 20 min. *Danny Kaye for School Savings*, 16mm, sound, black and white, 16½ min., not cleared for television. *The Junior Astronaut*, 16mm, sound, black and white, 15 min., cleared for television. *Rocky and Bullwinkle Savings Stamp Club*, 16mm, sound, black and white, animated cartoon, 15 min., cleared for television. *Beaver's Savings Stamps*, 16mm, sound, black and white, 18 min., cleared for television. *Stamp Day for Superman*, 16mm, sound, black and white, 15 min., cleared for television. *The Story of Old Glory*, 16mm, color, sound, 16 min., not cleared for television

SERVICES AND FACILITIES: USIA produces, acquires and distributes abroad motion picture and television films for the overseas information and cultural program of the U.S. Government. The USIA audience numbers several billion television viewers in more than 100 countries plus around one billion persons who annually see USIA films in theatres and private showings. Output ranges the full gamut of both media — from brief newscasts to feature length motion pictures and hour-long television programs. These products are released in as many as 75 foreign languages.

PRODUCTIONS: Examples of the Agency's motion picture and television output include: Documentaries such as *Project Apollo*, *A Few Notes On Our Food Problem* and *Art of the Real* based on an exhibit at the Museum of Modern Art; *Enfoque: Las Americas*, a half-hour television series for Latin American; *Adventure* series for Africa and *Washington Correspondent* worldwide both television productions.

THE CANADIAN FILM INSTITUTE

NATIONAL OFFICE: 1762 Carling Avenue, Ottawa 13, Ontario, Canada.

OFFICERS: Jean Clavel, President; T. Johnson, Vice President; Andre Saumier, Vice President; Gordon Sparling, Honorary Treasurer; Gordon Noble, Executive Director.

DIVISIONS: Canadian Film Archives, National Science Film Library, Business Film Service, Reference and Information Center and Film Study Centre.

PURPOSE: To bring together Canada's educational, scientific, cultural and community interest in the field of films and to encourage and promote the study, appreciation and use of motion pictures and television as educational and cultural factors.

ACTIVITIES: Film Services — National Circulating Film Library (12,000 titles in special subject collections); Importation of films from other countries (Special services in the fields of business films, scientific films, films on art, medical films, etc.); Reference and Information Center — information on 100,000 feature and short films, newspaper clippings; book and periodicals library, etc.; Canadian Film Archives — preservation and study of films; National Film Theatre, Peter Morris, Curator; National Science Film Library — programmes, information and distribution in the area of science films, Steven Rothwell, Programmer, Director.

PUBLICATIONS: Books, Booklets, Film Study Notes, Catalogues, Special Subject Listings, Information Sheets and *Film Canadiana* — a quarterly catalogue, listing all film and television programmes produced, or released for distribution in Canada. •

Meet your new PR film distribution team.

Big films like *Sweet Charity* are drawing more and more people into the movie theaters on a regular basis. And along with these major films, guess what else these growing audiences are seeing? Right. A PR film, which has been booked to help reinforce the program.

Not just *any* PR film, of course. But it is true that huge, measurable audiences are available to you if your film is right for theatrical distribution.

A lot of people in PR film distribution are now talking about this new medium, and we're delighted to have them join us. We've been talking about motion picture theater distribution for years. As part of the Universal-MCA family, it wasn't hard for us to spot this trend when it *first* happened, and to take advantage of it for our clients. There are still a few tricks up our sleeve that your distribution house probably hasn't caught on to yet.

This is just one more reason to talk with us about *your* PR film distribution. Whether it's movie houses only, or a full mix of all of today's distribution channels, you'll find it really does pay to talk with the man from United World.

BOARD OF TRUSTEES: Mrs. Edith Bennett, *Exec. V.P.*; Richard J. Babcock (Farm Journal); *Continued on page 46*

Quality... Service... Dependability

... everybody's promise to the film maker!

These are all empty words indeed, without the know-how and the personal attention of experienced people to back them up.

René "BO" Mathieu, our Vice President in charge of Laboratory Operations for over twenty years, has been helping us to put life and meaning into the words "Colburn Quality," "Colburn Service," "Colburn Dependability." "BO" and his co-workers have that priceless experience and the equipment to help you achieve a finer finished film on your next production.

COMPLETE LABORATORY SERVICE FOR 16MM / EDITING / RECORDING / WORK PRINTS
SUPER 8, 8MM & 16MM RELEASE PRINTING / TITLING / 35MM SLIDE AND FILMSTRIP SERVICE

Preference...

2000 YEARS AGO

In the Roman market place, a customer rejected the merchant's ordinary goods and asked for something better. —And 2000 years from now, a customer will go to the market place and make the same decision. As long as a choice exists, the discriminating will want something above the average. We pride ourselves that this is the reason so many of the finest firms come to Frank Holmes Laboratories for the processing of filmstrips and color slide duplicates.

SPECIAL CONSULTANT: Charles Dana Bennett. BOARD OF CONSULTANTS: Roy Battles (Clear Channel Broadcasting Service); E. G. Cheronnier (Foundation for American Agriculture); Ott Coelln (BUSINESS SCREEN MAGAZINE); Kit H. Haynes (American Farm Bureau Fed.); H. N. Hunsicker (Office of Education, HEW); J. Don Parel (Association of American Railroads); Val Sherman (National Milk Producers Federation); Russell Tall (Nat. Council of Farmers Cooperatives); C. Maurice Wieting (Ohio Farm Bureau Federation); Louis H. Wilson (National Plant Food Institute); Judd Wyatt (Missouri Farmers' Association).

MEETINGS: The Trustees meet each year in June. The Board of Consultants meets to screen films on call of the Executive Vice-President. **PURPOSE:** The creation of better understanding between rural and urban America through audio-visual education.

ACTIVITIES: (1) Distributes through its main office and cooperating depositories 16mm motion pictures found suitable by Board of Consultants for Foundation endorsement. Distribution is principally to rural America. There is no cost to film users except for return postage. (2) The Foundation, through its contacts with all phases of rural America, makes available a unique consultation service to film sponsors and producers.

FEDERATION OF SPECIALISED FILM ASSOCIATIONS

OFFICE (of the Secretary): 25 Green Street, London, W. 1, England. Telephone: 01-499-0631. J.P.H. Walton, *General Secretary*.

PURPOSE: The Federation represents and promotes the interests of all branches of the specialised film industry through its constituent member Associations: (1) Association of Specialised Film Producers representing the producers of cinema shorts, documentaries, educational and training films, sponsored industrial and Government films. (2) Advertising Film Producers Association representing producers of advertising films for television and cinema. (3) British Animation Group representing producers of cartoon, animated diagram, special and model animation films. Each Association is represented on the Federation Council by its Chairman and Vice-Chairman and elected representatives.

THE FILM COUNCIL OF GREATER COLUMBUS

OFFICES: Center of Science and Industry, 280 E. Broad Street, Columbus, Ohio 43215, and Office of Columbus Film Council, Kresge Bldg., Room 212, 83 South High St., Columbus, Ohio 43215.

OFFICERS: Dr. D. F. Prugh (Director, Franklin

County Historical Society, *President*; Galvy Gordon (Public Relations Dir., Columbus Public Library), *Executive Vice-President*; Mary A. Rupe (Film Librarian, Columbus Public Library), *Secretary-Treasurer*.

TRUSTEES: G. Roger Cahaney President, (Sterling Movies U.S.A.); Dr. Edgar Dale (Research Associate of the Bureau of Education, Ohio State University); Carl M. Lenz, (President, Modern Talking Picture Service); Dr. Robert M. Wagner (Chairman, Dept. of Photography, Ohio State University); Charles W. Vaughn (Director of Communications Arts Department, Xavier University).

PURPOSE: To promote a greater interest in the production and use of films by schools and universities, public service organizations, civic groups, and business firms and industries. The use of films by these organizations in the Columbus area and the state is also stressed.

documentary, educational, informational, promotional and governmental films; upgrading of standards and advancement of the "state of the art."

MEMBERSHIP: Primarily composed of industrial, business, educational and government film producers, directors, writers, cameramen, editors and technicians as well as members in commercial labs, equipment firms, independent production studios, commercial labs and equipment firms.

PUBLICATION: Official publication of the IFPA is **BUSINESS SCREEN**. Internal publication is the **NEWSLETTER**.

1969 ACTIVITIES: Tenth Annual National Conference, Trade Exhibit and IFPA Film Awards Banquet, Los Angeles, California. Hotels & Dates to be announced.

INTERNATIONAL QUORUM OF MOTION PICTURE PRODUCERS

OFFICE (of the President): Paragon Productions, 2930 "M" St., N.W. Washington, D.C. 20007 USA.

OFFICERS: W.B.H. Legg, Jr. (Paragon Productions, Washington *President*); Hack Swain (Hack Swain Productions, Inc., Sarasota, Florida), *Vice President*; Fred A. Niles, (Fred A. Niles Communications Center, Chicago, Ill.), *Secretary/Treasurer*.

GOVERNORS: Georges Pessis, Paris; Heinrich Fueter, Condor Films, Ltd., Zurich; G.H.W. Groom, Films of Africa (Pty) Ltd. Johannesburg.

MEMBERSHIP: Members include 53 non-theatrical motion picture production companies, situated in 31 marketing areas of the United

States, plus one company in each of Australia, Belgium, Canada, Denmark, Finland, France, Germany, Greece, India, Japan, Kenya, Mexico, Norway, Peru, Portugal, Puerto Rico, South Africa, Sweden, Switzerland, Turkey, United Kingdom, and Yugoslavia.

PURPOSE: This is an international network of non-theatrical producers of films for industry, government and television. Purposes are to assist in the exchange of ideas, information and understanding among its members, to broaden the horizon of each member through affiliation with member-producers located strategically throughout the world; to raise the professional standards of non-theatrical motion pictures by examples of excellence; to share among members new concepts and technology for the betterment of motion pictures; to exchange information on personnel, equipment and markets for the good of all members; to provide members with information on photography and recording conditions in each area, and to simplify and render more productive the operations of all members.

THE NATIONAL COMMITTEE ON FILMS FOR SAFETY

OFFICE (of the Secretary): 425 North Michigan Ave., 5th Floor, Chicago, Illinois 60611.

OFFICERS: Thomas H. Wilkenson (Safety Director, Dept. of The Army), *Chairman*; William Englander (National Safety Council), *Secretary*.

MEMBER ORGANIZATIONS: American Automobile Association, American Association of Motor Vehicle Administrators, American Insurance Association, American Medical Association, American National Red Cross, American Petroleum Institute, American Public Health Association, American Society of Safety Engineers, American Society for Training and Development, American Water Works Assn., Association of Safety Council Executives, Auto Industries

Highway Safety Committee, Automotive Safety Foundation, Insurance Institute for Highway Safety, National Association of Automotive Mutual Insurance Companies, National Association of Manufacturers, National Association of Mutual Casualty Companies, National Fire Protection Association, National Grange, National Safety Council, U.S. Dept. of the Air Force, U.S. Dept. of the Army, U.S. Dept. of the Navy, U.S. Dept. of Transportation, U.S. of America Standards Institute.

PURPOSE: A co-sponsored group of national organizations, with active interest in accident prevention through use of films, who wish to accomplish the following objectives: 1. To stimulate production and use of safety films. 2. To raise the quality of films produced. 3. To establish film evaluation standards. 4. To recognize film excellence in awards program.

1970 ACTIVITIES: April meeting of the Committee as a Board of Judges to screen and finally judge entries in their 27th Annual Safety 16mm Film Awards Program. October evening showing of top winning films and presentation of awards to representatives of sponsors and/or producers (during the National Safety Congress and Exposition in Chicago, Ill.).

WE TOOK THE WORDS RIGHT OUT OF THEIR MOUTHS...

and replaced them in ENGLISH! with

MANHATTAN'S MAGNA TECH ELECTRONIC POST-SYNC SYSTEM!

We took Israel's most ambitious motion picture, "THE FLYING MATCHMAKER", a full-scale musical in color and 'scope . . . and adapted it to the English language from its original Hebrew. We even put English lyrics into the mouths of Hebrew singers . . . and you'll be seeing the almost unbelievable results on theatre screens within the next few months when NATIONAL SHOWMANSHIP releases its brilliant Israeli hit, "THE FLYING MATCHMAKER" throughout the country.

Of course we've post-synced such films as "John and Mary", "Paranoia", "Goodbye, Columbus", "Jenny", "The Love Machine", "Take the Money and Run", "Z", "The Equipment", innumerable other features and loads of commercials and industrial films too!

But that's understandable when you consider that MANHATTAN'S Magna Tech ELECTRONIC POST-SYNC SYSTEM requires NO LOOPS . . . plays back every "take" — in sync — and lets you take the best of each take and place it in sequential position on a single track, while you (and your talent) are still in the studio.

From first word to last — you have maximum control . . . and speaking of the LAST WORD . . . it's

Hang around a certain crowd

and you get a reputation.

Our crowd doesn't mess around. Before they decide they investigate. That's why the MPO Videotronic Super 8 Projector is used by so many top companies.

But then, when you make the best repeater movie projector (and after 35 years of projector manufacturing experience, we do) people find out. About the Videotronic Super 8's unique 2-way projection—views on its own built-in TV type screen, or throws large wall picture. How it's cartridge loaded, so there's no touching or rewinding the film. About the superb transistorized sound. How it folds to carry easily, can fit under a plane seat. Find out what it can do for you in sales, merchandising, promotion, training. For information about leasing plans and film and

tape conversion for Videotronic Super 8 use, have your local producer call or write us. Or do it yourself.

Basic Training

There's nothing worse than a machine breaking down in the middle of a presentation when you're trying to train the troops. That's why there's nothing better than a Graflex 16mm projector.

No matter which model you choose, you'll get the features you want most:

A brighter, easier-to-see picture. Easier-to-use controls, better labeled and fewer in number. Easier film handling that couldn't be more reliable. Solid state amplifiers that spread undistorted sound throughout an entire room whether it's large or small. And solid state circuitry that turns the projector on in a snap so you can switch from film to whatever, whenever you want. Other models include Arc-Lite, television, and magnetic features as your needs require. We even have a 950 model priced so economically that we call it budget projection. It's yours right now at your Graflex dealer. Or write Graflex Division, The Singer Company, 3750 Monroe Avenue, Rochester, N.Y. 14603. In Canada: Graflex of Canada Ltd.

IFPA JOURNAL

INFORMATION FILM PRODUCERS OF AMERICA, INC.

P.O. Box 1470, Hollywood, California 90028

Snoopy & Cindy Hits at IFPA Conference

MEEETING AMIDST the grandiose splendor of a bygone era in this historic Sheraton-Palace Hotel in San Francisco, the Tenth Annual Conference of the Information Film Producers of America discussed topics as timely as today's news — social problems, Apollo moonshots and revolutionary new lighting techniques.

Co-sponsored by the Sixth U.S. Army at Presidio, California, the IFPA conference continued its record as one national meeting that operates on time. More than 200 conference participants were welcomed by IFPA President Mitch Rose, Col. H.H. Arnold of the Sixth Army and a representative from San Francisco Mayor Alioto's office.

Keynote speaker Don Fabun set the pace and theme of the conference via his videotaped comments on "The Shape of Things to Come" in personal relationships, research, technology and environment.

Highlight of the opening morning of the conference was a presentation on "The New Look in Religious Telecasting" by Father Emory Tang from St. Francis Productions in Los Angeles. Discussing the popular "teleshots" and their job in communicating vital socio-religious messages to Amer-

ica, Father Tang presented examples of the teleshots now receiving nationwide broadcasting via TV stations throughout the country.

Discussing "Film and the Friendly Skies," John Grember, manager of motion pictures at United Air Lines told IFPA how the famous United slogan and spirit evolved. Following some clips of United's most successful commercials, he provided a sneak preview of his company's arty new film on Los Angeles. Following in the pattern of the previous "swinging cities" series films, the Los Angeles film provides a swinging look at the nation's smog capitol for the young traveler.

During the afternoon of the first day, the "Dick and Jerry Show" (Dr. Richard Lewis and Dr. Jerry Kemp of San Jose State College) presented an enlightening look at "Trends in Media Utilization in Training and Education". They presented a bouncing demonstration of what can be done through carefully planned utilization of various A-V equipment in training and learning.

Following an Eastman Kodak presentation on a new Ektachrome film, Charles Intrator, New York Gaffer unveiled the

with specially designed
**TREISE
FILM ROLLERS**

There's no drag . . . no film abrasion . . . no wear and tear . . . when you use Treise Rollers. Their unique ball-bearing design insures minimum film pull and provides exceptionally smooth processor performance. All rollers are molded entirely of durable plastic. Moreover, the lands in the rollers are angled so that the film "rides" with only the outside edges touching. The film image never comes in contact with the roller and thus never receives the slightest scratch or abrasion! Available in 8/16mm, 16/35mm, and 70mm. Sizes from 2½" O.D. to 7¾" O.D. Shaft diam: ⅜", ½", or ⅝". Choice of stainless steel or nylon ball bearings, or plastic bushings.

Treise Accessories put NEW LIFE in any processor!

"SOFT TOUCH" ROLLERS

feature special "tires" composed of tiny silicon or rubber knobs that firmly grip the film and smoothly move it along. Ideal for use with unperforated or multi-perforated film, or for any film on tendency drive processors.

unique new "clip strip" for studio and location lighting. As potential application raced through the collective minds of the audience, Intrator demonstrated and provided fascinating case histories of this clever new lighting concept.

Senator George Murphy's luncheon address was presented by Bob Scott, former IFPA president. In his message, Sen. Murphy observed, "If McLuhan is right about our global village and if many of our younger citizens are identifying themselves with the 'now generation' then your science

and your technology have caused it. And, if there are new human problems that have resulted; perhaps we should all share some of the responsibility."

Challenging IFPA members to improve our world, Sen. Murphy added, "In today's challenging world — where we have so much to learn and so little time to learn it — where youth is demanding that everything be told exactly like it is — we'd better improve, develop and protect the freest and broadest possible exchange of accurate information through audio visual communi-

cation, showing and telling the truth — to fill those credibility gaps and bridge those generation gaps we've all heard so much about."

The final day of the conference began with a bus trip to the nearby Presidio Army base where conference participants were treated to a special preview of the new 20th Century Fox feature *Footprints on the Moon*, produced by Barry Coe. This historic epic was written by IFPA's Bob Scott and skillfully edited by IFPA's Bill Gibson. Tracing the historic voyage of Apollo 11, the film will soon be shown in theatres throughout the world.

Continuing the Apollo 11 and space theme, cartoonist Charles Schulz was the featured luncheon speaker along with Albert Chop, resident Apollo Spacecraft Officer at North American Rockwell. Schulz outlined the "Snoopy" error elimination motivational program among NASA contractors and sub-contractors. Following his presentation, Schulz was presented with a special NASA award plaque containing a "Snoopy" pin that made the Apollo voyage.

The final afternoon program was loaded with timely examinations of current topics. Dr. Bernard Kantor, chairman of USC's Department of Cinema offered a look into the future via presentations of current student work and explaining what they are thinking and how they go about their film work. Referring to young people as "the film literacy generation," Kantor said today's producers must learn to make films that reach them.

The afternoon was concluded with a look at the visual symbols and motivation in the Apollo space program and a presentation of the future of space photography by Bill Gibson.

The concluding conference banquet where 41 "Cindy" awards were presented was masterfully emceed by Bob Crane, Col. Hogan on the TV series "Hogan's Heroes."

This year's Eugene Keefer Memorial Award was presented to the 1365th Photographic Squadron at Norton Air Force Base. The annual Jay Gordon Award was presented to Bill Gibson by last year's recipient, Charles "Cap" Palmer.

Guest of honor for the evening was Rep. Jerry Pettis, (R.-Calif.). Addressing those attending, Rep. Pettis called the recent Apollo 11 television coverage "the greatest show on earth — to date" and said, "It was the miracle of space age communication that permitted the world to share the event. That is the promise of audiovisual communication at the speed of light. If it can produce one moment of shared experience — one moment of greater unity and understanding — and on a global scale — then if it is properly used, in good will, it can also help bind our separateness, our differences, our misunderstandings, our disunity. All of these diseases, I believe, can be cured by more effective global communications."

Next year's annual IFPA conference is scheduled to be held in the Los Angeles area in October.

A busy registration desk (above) often found Jackie Stillwell handling registrants and fielding phone calls at the same time. Cartoonist Charles Schulz was presented a special award (right) for his "Snoopy" contribution to the space program.

Exhibit areas outside meeting rooms were a crowded attraction during the coffee and lunch breaks.

“WHAT IS A non-theatrical film producer doing in South Dakota?”

That, invariably, is one of the first questions asked by friends in the motion picture industry accustomed to the bustle of Los Angeles, New York, Chicago, Denver and other population centers.

In response, I answer, “Thriving.”

It's true. Since starting my own production company in Rapid City, in 1959, I've averaged five films a year for seven years for a variety of clients. It hasn't all been easy, but it can be done—an independent film producer can thrive out of the industrial-business mainstream markets.

Two of the key ingredients for success in such markets are some knowledge of the area's industry and a heavy dose of sales promotion. Of course, the same criteria for success in any facet of the motion picture industry also applies here—a willingness to travel, and to invest a lot of hard work.

In the first area, I had a built-in advantage. I was born and reared in the ranch and farm country of the West. My desire to return to the plains led me to take a long, hard look at the quad-state area of North Dakota, South Dakota, Wyoming and Nebraska as a potential business site. Investigation uncovered a substantial potential clientele in the livestock and mining industries that dominate the commerce of this area. I discovered that only one firm in the area was using a promotional film—a black-and-white production shot in 1928.

Getting started in an untapped area such as this was not as difficult as it may seem. First, I had samples to show, work I had done while heading up a motion picture division for a major corporation. Similarly, I had contacts in the area, gathered while operating out of Denver for this same firm. Importantly, I had also a positive plan for sales promotion.

Right from the start, direct mail became my primary means of contact with potential clients. I put together a mailing list of all the livestock associations, all the mining companies, all the utility companies, and all the state offices concerned with promoting tourism. To this list, I sent letters describing the value

of film as a promotional communications tool. As the first inquiries came in, I followed up with personal calls, showing samples, and, in effect, educating my relatively unsophisticated prospects to the value of motion picture film. After a lot of writing, a lot of traveling, and a lot of talking, I had my first client, a livestock growers association.

In the years since, my basic selling pattern has remained the same. The initial contact with prospects is usually made by direct mail, although some are referred by previous clients.

The basic direct mail program I started with has been expanded to include self-designed and produced brochures, as well as a series of five different brochures entitled, “Movies Move People”, produced by the Eastman Kodak Company and personalized to my company's name. These materials are sent to my new prospect mailing list at two-week intervals, and have proved quite successful in generating inquiries.

A request for information from the prospect—which we get from about four percent of the recipients of the direct mail program—is followed up with a background brochure detailing my company's experience in the business.

The brochure is a looseleaf type, in which individual elements can be inserted to tailor the presentation to the specific prospect. The first item in the brochure is a cover letter thanking the prospect for his interest. This is followed by a printed sheet that lists some of our better known films, particularly those that have won awards. Then comes a printed list of most of the major films produced during my 25-year career. These are backed up with reprints of articles about some of my films, testimonial letters from clients, and one of six brochure pages tailored to the character of the prospect's business. The selection of brochure pages including general industrial, livestock, mining, tourism, power company, and training film versions of the basic sales information.

While the prospect is, hopefully, digesting my promotional background material, I am analyzing him as a prospective client. If everything works out, I follow up with a personal call. I make it a practice to see only

MAX HOWE— Success in the Boondocks

By **MAX HOWE**
Max Howe Productions
Rapid City, South Dakota

HOWE'S QUARTER CENTURY IN FILMS

The author, Charles M. “Max” Howe, at 53, is a veteran of more than 25 years in the motion picture film industry. During that period he has produced, directed, scripted and filmed 66 business and industrial productions on over 30 different subjects. A number of these films have won awards:

Four Seasons West, a 29-minute color production prepared for the South Dakota Stockgrowers Association, was the 1960 winner of the Western Heritage Award presented by the National Cowboy Hall of Fame as an outstanding Western Documentary.

Power for Good, produced for the Black Hills Power and Light Company, was named the winner of the 1964 Better Copy Contest Award by the Public Utilities Advertising Association.

Sitzmark received the 1965 Notable Advertising Film Award from the Calvin Workshop, Kansas City, Missouri. It was produced for the Red Lodge Ski Corporation.

For Those Who Stayed, a film produced for the Northwestern Public Service Company, Huron, South Dakota, won the 1965 Better Copy Contest First National Award from the Public Utilities Advertising Association.

Howe's most recent production, **Run the Wild Colorado**, earned the “Golden Eagle Award” for 1969, at the International Film Festival in Washington, D.C.

In addition to his award-winning sales and promotion films for business and industry, Howe has filmed 143 travel and scenic productions throughout the United States.

Located in Rapid City, South Dakota, Max Howe Productions also maintains offices in Denver, Colorado and Salt Lake City, Utah, and serves clients throughout the northwest Plains states.

"I spend 75 per cent of my time selling . . . 25 per cent filming."

max howe . . .

continued

Also a member of the production team, Harriette (Mrs. Max) Howe edits production rushes to relieve Howe for sales work.

the top man in the company—the decision-maker—in order to cut down on waste time.

One thing I have learned, over years, is that in dealing with non-users of film, the educational process has to begin with your first letter and continue through the final screening of the completed film. Basically, my selling theme is, "You (the client) have an idea to get across. Motion picture film is an ideal medium to convey your message. I am the expert in communicating this message."

In dealing with unsophisticated, first-time users of films, I've found that my long experience in the industry pays off. It not only makes selling the prospect easier, but allows me to guide them around the mistakes common to first films.

I usually begin by showing the client a film called, "The Vicious Circle," (produced by Calvin Co. of Kansas City) a satire on the frustrating experience of a producer calling on a company and working his way up the chain of command. The client usually gets the point.

Of course, not all inquiries result in sales. There was one prospect with whom I'd communi-

cated for over nine years. When he finally did make up his mind to move on a film, he selected a group of university students who bid the production at 15% of my cost. But this is to be expected, particularly among beginners in the use of films. I have made it a practice not to compromise my commitment to quality. From initial contact to finished product, I insist upon quality. It has paid off, in happy clients, and a number of industry awards, as well.

Overall, I estimate that I spend about 75 percent of my time selling, and only about 25 percent in actual filming. I do have some help in running the business. My two daughters help to operate the office and handle the direct mail promotion. One of the girls, Linda, as well as my wife, assists me in editing rushes. This has helped free me to travel sufficiently to both follow up on sales opportunities spread across five or six states, and to do a lot of on-location production without having my sales promotion program come to a complete halt.

Our location in the "boondocks" has led us into some very interesting assignments. The latest of these was the shooting of a

28-minute 16mm sound/color production called, *Run the Wild Colorado*, for Jack's Camera Shop of Rapid City, South Dakota, shot from a bouncing rubber raft running down the rapids of the Colorado River through the Grand Canyon. This film was released in December, 1968. Other jobs have taken us into a Montana blizzard and 5,900 feet underground in a gold mine.

Assignments like these, plus living in an open, clean rural atmosphere, have made doing business away from the population centers, where most motion picture producers work, a joy. Consistent promotion has kept me as busy as I could want to be. The future looks bright, too.

With taxes going ever upwards, and natural resources dwindling in many of the more populous areas, industry is beginning to move into our area. This influx of diversified business is creating a new market for my services, particularly in the area of sales and training films in super 8mm sound. Our sales promotion program is being geared to go after this business. Constant motion is the only way to go out here in the boondocks of South Dakota. •

Frequently working as writer, director, producer and cinematographer, Howe shoots a scene for a film.

Getting some expert editing advice, Linda Howe prepares final cutting and editing of film.

Film crew shoots cream puff dune buggy "that 17 coats of handrubbed lacquer is no place for one speck of dirt."

Old Message, New Format

A "now" look at teenage dental care

DESPITE THE ADAGE about old wine and new bottles, it is not only possible but often desirable to put old messages in new film formats. Ample proof of this proposition can be found in *Teeth*, the motion picture recently released for educational distribution by the American Dental Association. Previous A.D.A. films on dental care were still in circulation but a replacement was needed. Also needed, in the opinion of producer Cal Dunn and writer John Davenport, was a radical departure from the conventional "straight" approach employed in the sponsor's previous films for high-school audiences.

It seemed to them (and they were prepared to argue the point) that in recent years there have been exciting changes both in film techniques and in the attitudes of teen-age film viewers. To bolster their position, they could cite the impact of Expo '67, the widespread influence of "Pop" and "Op" art, not to mention the minimal, hard-edge and super-realist schools. We've had Marshall McLuhan, of medium-is-the-message fame and an emphasis on form over content. We've had various new forms of popular music, from rock to acid rock, folk rock and soul rock, from Beatles to Moog-Bach. Most important (they felt) we've had an emergence of a dynamic new sub-culture of teen-age youth, with its own signs, symbols, styles, and visual-verbal vocabulary.

Why not, Dunn/Davenport reasoned, make a film which would approach its young audience on their own terms, in their own special language? Why not tell it like it is (the ADA input) but also like a teen-ager would like to have it told?

The members of ADA's film committee were in full and even enthusiastic agreement.

In short order, Ted Ashford and Steve White were composing a big-beat musical score for three guitars, drums, and electronic organ.

The score was recorded by "Food", a combo of young musicians who had recently taped the original music track for the feature film *The Baby-Sitter*, and whose Capitol album was then approaching release.

Dunn assembled a cast of young actors and dancers, and threw an on-stage party for cast and combo on two live-sound sets decorated with psychedelic artwork, with mind-blowing disco-type lighting. To play-back, the combo played, the dancers danced, the actors acted, and all assembled around the refreshment table to be filmed in the inevitable break for soft drinks and sweet snacks. Cameraman Hal Schullman shoulder-mounted his Arri to shoot

with complete flexibility, wide angle and tele, high, low, Dutch and some other angles as yet un-named.

After two days on stage, director, Dunn, camera and crew followed the cast on location for flash-cut coverage of the teen scene: surfing, a beach party, hamburger stand, sand dunes and dune buggies, not to mention dentists' offices and exhibits at Chicago's Museum of Natural History. (Primitive men had good teeth but bad gums.)

Meanwhile, a research assistant was assembling flat art and illustrations at the archives of Chicago's central library.

Under the Oxberry, Dunn shot 130 pieces of flat material, B&W and color, for a 40-second historical recap of U.S. history from frontier days to Astronaut Neil Armstrong's first "giant step" onto the moon.

With all the film in the can, Jim Dricker started editing, cutting together and mixing artwork titles, still and motion pictures, black and white, full color, reversed color, negative and positive all with a minimum of opticals.

A few additional statistics help to describe the completed film. Running time, 12 minutes. Actual film cuts, 360. With original music and live sound, total narration was held to 4½ minutes.

Nowhere in this film will its with-it audience find the usual up-tight lecture from a "square" authority such as parent, friendly dentist, wise stylist or grooming expert. The message comes through by virtue of near-subliminal artwork and free, off-beat interchange between actors and narrator. And the message *does* come through that teeth are good for singing, smiling, eating, looking best, looking at—and with good care can last a lifetime. As the film puts it, the "in" thing with dentists is keeping *teeth* in—which of course is exactly what the ADA has always had in mind.

The completed film was premiered in New York City's Coliseum at the 110th annual session of the American Dental Association, in conjunction with the 57th annual session of the Federation Dentaire Internationale, October 12 through 16, and was widely shown over the ADA's closed circuit TV network in delegates' hotel rooms. Reactions from delegates have been uniformly good. Also, test showings to high school audiences indicate that "Teeth" may represent a "milestone" in dental and health films for the "difficult" age group.

Teeth has already received the Bronze Medal in the Health and Home Economics category in the 1969 New York International Film and Television Festival.

VIDEO MATRIX—For All Uses

Dramatically departing from traditional A-V techniques, American Can Company is using one of the most sophisticated video show systems ever devised for total marketing communications both internally and for public shows.

In a bold departure from traditional communications techniques, American Can Co. has introduced one of the most sophisticated and concentrated video show systems ever developed by private industry, utilizing the latest electronic communications technology.

Christened "Video Matrix," the system was developed to provide the most meaningful and flexible marketing communications system possible for American Can Co. in the Markets of the '70s. The Video Matrix will be used for both external and intra-corporate communications of company activities and technology, public displays, employee communications, executive recruitment and sales/marketing communications. American in November will introduce the communications technique by presenting live and videotape TV on more than 50 monitors in a single trade show exhibit area. The showings will dramatize corporate leadership and innovation in products and services.

The concept, developed and produced by Harvey Lloyd Productions, Inc., New York City, is the first total TV exhibit of its type and sophistication to be shown anywhere. It will project up to six different pre-taped programs continuously and simultaneously, interspersed with product and process demonstrations and live interviews of show visitors and industry leaders, all shown on 56 monitors with individual headset plug-in sockets.

The exhibit, built by Lynch Exhibits and engineered by Hampton Engineering, is

totally modular in construction and utilizes up to 144 two-foot chrome-framed glittering, transparent plastic cubes as "building blocks" which can be arranged to conform to the distinctive shape and size of any convention display booth. This maximum flexibility also permits concentrated placement of monitors facing the aisle or aisles carrying heaviest visitor traffic. Additional cubes are provided for storage, seating areas, and company products.

American Can's Video Matrix was shown first in its consolidated version at the Frozen Food Show at the Americana Hotel in New York City, Nov. 2-5, and in dual form at the company's two separate display areas at the National Soft Drink Association show at Civic Auditorium in San Francisco, Nov. 17-20.

"This exciting new exhibiting technique will project up-to-the-minute information about the company's products, people, design, research and overall capabilities," James Chowning, creative services director of American Can Co., said. "Contemporary communications media demand a new exhibit concept, commensurate with American's image as a progressive, innovative, and responsible leader in new packaging technology.

"Television is the universal electronic language of the 1970's," Chowning emphasized. "TV is uniquely suited to entertain and inform audiences. TV is a 'live' medium giving everyone personal contact with speaker and subject matter.

"Our TV exhibit uses videotape and live

cameras to record and view subject matter repeatedly. On videotape, as in live presentations, visuals and sound are recorded, but the system also permits utilization of appropriate movies, still pictures, sound effects, photographs and art work. Videotape will be edited, up-dated and changed right up to show time. This new tool of effective marketing permits us to bring any tailor-made message before a specific audience in its most communicative, dramatic and receptive form."

Chowning said American Can had been exploring for months new opportunities which might exist for upgrading the standard of quality and effectiveness of its exhibits which appear in a score of national and regional trade shows annually. He said it is generally recognized that other media have been "over-used and over-exploited" in such shows.

"We believe that this space age innovation opens a new era in specialized commercial and industrial communication," Chowning said.

Technical Data

Harvey Lloyd, president of Harvey Lloyd Productions, outlined technical details of American's Video Matrix program, which has been adopted for a wide range of exhibitions and displays throughout 1970.

Fifty-six TV monitors, six videotape playback units and six vidicon live cameras—all by RCA—are supplemented by switching circuitry and control equipment. All of these units are housed, exposed, in the plexiglas cubes, to create glittering, electronic environment.

Six pre-taped programs will run at once. After each short, taped message, automatic switching will turn that bank of monitors alive, showing the exhibit and viewers to themselves. At the control console, a live TV camera will pick up interviews of top people and visitors, sending their images to 50 black and white monitors. In addition, six color monitors will carry color programming.

"The principle is short bursts of pre-recorded videotaped messages, alternating with live programming," Lloyd pointed out. "Born of television, this formula permits immediate visual communication with any desired mix of live pick-up—plus photographs, video-tape, film or slides. Thus American Can will create its own programming for each event. Live statements and 'sell' can be inter-cut with other illustrations. Major new product and sales news, corporate capability, research and development, technical services, customer services, art and design and American Can identification logos will be shown in half-minute to one-and-a-half minute segments. Messages will be pithy and timely, in news style. The entire exhibit program, just as with human reactions, thus will grow, change and develop."

Individual headsets provide private listening at some of the TV receivers used in the Video Matrix presentation.

Cameras, TV receivers and associated equipment are shown here in their plastic modules. Maximum flexibility of the system permits one, part or all of the system to be used at any one time.

Videotape recorders are shown in the background. They provide part of the programming involved in the Video Matrix system shown at the right.

Good technical productions help make good tapes at Prudential's Video Center in Newark, New Jersey. Below, cameraman zooms in to capture a point being made in discussion. The center uses two floor cameras and several mobile units. Tapes are made at nine different Prudential field centers.

VIDEOTAPE AT PRUDENTIAL

THE FACT that Americans are living longer and forming families earlier now is keeping the insurance business hopping — continually revising and devising life insurance plans to meet needs of the people in an \$884.4 billion industry.

At Prudential, the nation's top-ranked life insurance company in assets and No. 2 in insurance in force,* videotape recording is helping keep company specialists abreast of the changing times.

The Prudential Video Center at the company's Newark, New Jersey, home office is one answer to an industry-wide problem of keeping management, agents and office employees ahead of new policy changes, and updated procedures associated with modern life insurance requirements. That's important where 40 million policyholders are concerned.

Prudential's senior audio visual specialist, Dick VanDeusen, operates the studio, which is kept busy filling the needs of 12 internal departments. A week's work at the New Jersey center often includes production of role playing tapes, staged training presentations or information tapes such as "A New Approach To The Payment Of Group Health Claims."

From time to time the videotape center is called on to prepare presentations for the company's board of directors. When that happens the six-man staff, Hugh Sherry, writer-producer; Harold Gallina, technical director; Gordon Hawkins, director; Frank Westerdale, unit manager; Regina Collins, scripts, and VanDeusen operate mobile or floor cameras, taping, editing, and duplicating equipment. They then distribute the productions throughout the company.

The home and field offices use a variety of Ampex closed circuit equipment including Ampex 6400 cameras and assorted videotape recorders, from the Ampex VR-5000, VR-5100 and VR-6000, to a pair of VR-7500s in Newark.

Machine compatibility gives the entire Prudential videotape system a flexible set-up in its tape playback — while VanDeusen uses the VR-7500s as a mastering and duplicating system.

Prudential offices in Toronto, Boston, Newark, Jacksonville, Chicago, Minneapolis, Houston, Los Angeles, and Philadelphia

all have playback facilities. Chicago and Jacksonville do their own recording while the others rent equipment as required. Many of the tapes produced are edited and reviewed in Newark.

VanDeusen, who joined Prudential more than five years ago, says he knew then that videotape recording would develop at the company. What began as a test for potential uses has turned into what he now modestly refers to as, "one of the largest videotape centers in the state."

And the Prudential Video Center has earned a reputation of respectability at the home office and in the field over the years through several major programs recorded and produced by the videotape team.

One videotape program that gets company-wide attention is a 25-hour computer programmer course that ties in all local offices to the Newark headquarters. Given four to five times each year at the nine regional offices, the course is aimed at clarifying and simplifying details associated with servicing of insurance — such as claim payments or policy changes.

Perhaps the center's biggest success thus far was achieved in August 1968, when it produced a four-day closed circuit program for the District Agencies International Business Conference in Boston, where thousands of insurance agents gathered.

"More than eight hours of video tape was shown on a *Today Show*-type format through the hotel's closed circuit television system, a proud achievement for the center's staff," VanDeusen offered.

Variety was the hallmark of the program as segments on dining out in Boston, the president's trophy winning agent, and interviews with outstanding Prudential agents and managers shared the spotlight with taped samples of Prudential's advertising campaign, PR efforts, a baseball film, and a showing of a Prudential motion picture depicting life saving techniques uses by Boy Scouts.

"We use the system as a creative medium. We consider our programs as imaginative and professional. They are not instantaneous, nor should they be," VanDeusen said.

"Television at Prudential is definitely here to stay, and it looks as if it is going to be a major element of our total communications and training program for some time," according to the executive producer.

*From FORTUNE'S 50 largest life insurance companies, May 15, 1969

In an advertisement for the Famous Writers School, Bennett Cerf asks:
"DO YOU HAVE A RESTLESS URGE TO WRITE?"
"If so, you face an exciting opportunity . . ."

THANK YOU, MR. CERF!

Dear Mr. Cerf:

Thank you, Mr. Cerf, for asking that question.

Now that you mention it, Mr. Cerf, I have. I've felt it ever since I was old enough to read.

And I think you have a very real gift for words, too. I can see that from a mere glance at your advertisement. Just a few well-chosen words that put it all in a nutshell, so to speak. Like:

Restless — From my dictionary, that means not quiet or still; also active, seeking change.

Urge is to press on earnestly, to advocate strongly, to drive forward vigorously, to persuade or impel to action.

Opportunity is a combination of favorable circumstances; a fit time, a good chance or occasion.

How well, Mr. Cerf, in just those three words, you've described the work of a writer in the audio-visual communications business! Just see if you haven't.

This is a restless industry, *not* still or quiet, *seeking* change, *impelled* to action.

It is in exactly such a field that a writer's restless urge can lead to a most favorable combination of circumstances.

It can lead to a close and creative collaboration with talented and vigorous people — producers, directors, film editors, cameramen, sound recordists, set designers — who at fit times have the good occasion to drive forward earnestly to persuade an audience and propel its members to action.

It can lead a restless writer to work closely with all the varied people in the clients' fields of activity: top executives, decision-makers, prime movers, thinkers and builders; plant managers and plant workers; scientists, secretaries, engineers and foremen; doctors, dentists and nurses; physicists, chemists, mathematicians and dieticians; advertisers, marketers, personnel and P.R. men; sales promoters, etc.

Speaking of my own experience, Mr. Cerf, it's led me in over twenty years to Canada, Mexico, England, France, Germany, Ireland, Italy and North Africa, and always, luckily, since I am not by nature a tourist, at somebody else's expense. I am looking forward to visiting Australia, Asia and Hawaii. Expense free, of course.

In this country, Mr. Cerf, the only city of any importance I have not visited is Sioux Falls, and I've seen many of little or no importance. I have been in Ponca City, Okla.,

when it reported the highest temperature in the country. I've been to Key West in July and Duluth in December. I can guide the inexperienced traveller to the best accommodations in Bisbee, Arizona, Kokomo, Indiana, or Southwest Harbor, Maine.

In the way of business, my urge has led me to go up or down or into or onto or off in an aircraft carrier, tank, helicopter, blimp, submarine, racing car, sand buggy, snow-go, motorboat, freight ship, lumber truck, funicular and ski-lift. "How can you write about it," clients ask, "if you haven't experienced it?" (But to a recent offer to spend six months on an ice-breaker for a round trip through the Northwest Passage, I responded with thanks but no thanks.)

Any writer for any time in this restless business can say as much or more. His work may lead him to hospitals, laboratories, forests, dams, caves, stores, stations (bus, train and service), to bakeries, fisheries and granaries; to farms, mines (salt, iron and coal), refineries, banks, warehouses and hamburger stands; to steel mills, chemical plants, consulates and embassies.

He will go on a multitude of trips to factories making everything from pills to pipe, paper, plywood, plaster and plastics, from white goods to softgoods, from hardboard to hardware, from autos to appliances, tires and transistors, from tuners to television sets and toys, from ceramics to computers to meat substitutes and suits and shower enclosures, from a powerhouse (steam, hydro-electric and nuclear,) to a roundhouse, slaughterhouse and, yes, in the name of research, even to a house of less than high repute.

We've all been there, give or take an item or two — or will go soon.

Most important, Mr. Cerf, we with the restless urge in this restless business may be given the opportunity to assist in some small or large way in many of the good causes of business, industry, education, government, national defense, medical care, food production, transportation, conservation, urban renewal and civil rights. To the degree that democracy and consumer capitalism are inherently viable, we, with our many collaborators and clients, have helped to make it more so.

I don't suppose you can fully realize, Mr. Cerf, the excitement and continuing satisfaction that come to one of us who has helped to define and communicate the policies, objectives and ideals of a major cor-

poration, to promote a product or a sales program, or a marketing or advertising effort, or a course of training for executives, salesmen, small businessmen or production employees.

I know, Mr. Cerf, I still shake my head in wonderment that, despite a lack of any military service, I've helped to instruct my uniformed betters in strategy, tactics, electronics, mechanics and field operations.

On one wild and wonderful occasion, I assisted at the merger of two great banking institutions, although totally unable to merge my checkbook and bank statement.

But obviously, Mr. Cerf, you know all of this, since you were able to express it so well in only a few well-chosen words. Along with your great accomplishments as wit, raconteur, teacher, anthologist and publisher, you have been able to gain a deep understanding of our business of audio-visual communication in all its varied facets.

So it's no news to you that ours is a one-of-a-kind, break-the-mold operation. We're not canning beans. Many of our clients assure us *their* business is *different*.

Yes, sure it is. But *our* business is *all* different.

For that reason we often live dangerously. Crisis is the order of our days. And when crisis looms ahead or is already close upon us, a director, producer, editor, cameraman or accountant is only surprised that anybody else is surprised.

That's particularly true of our restless writers, if only because they're at the top of the batting order, first to the plate.

You might say it's the kind of business that if you don't like it, it isn't worth it so don't stay with it.

Those who stay like it *very* much.

I'm sure, Mr. Cerf, if you'd had the opportunity, you'd have liked it too. Especially with your gift for words.

Anyway, since you asked, I thought I'd fill you in, just to bring you up to date if you haven't been watching lately.

Maybe we can get together one of these days and kick it back and forth some more. I suppose you get around a bit too.

Maybe in Sioux Falls?

I just got a call to be up there in November.

If not, some other time and thanks again, anyway, Mr. Cerf.

Yours very truly,
John B. Davenport

Crew prepares to shoot a sequence from "A Lot of People Sell Hamburgers."

McDonald's Film Cuts Employee Waste

SPEARHEADING a McDonald's Hamburger campaign to cut down employee waste is a sharp film by Chicago's Betzer Productions.

A Lot of People Sell Hamburgers combines modern training and motivation. Successfully "getting through" to an audience of young men between 15 and 17 years old without preaching was the challenge masterfully met in the production.

Jeff, the star of the film, is a

McDonald counterman with a "so what" attitude. So what if he gets an order wrong? So what if he drops a couple of patties? Or, sticks his fingers in the french fries?

A new "crewman" shows up in the film . . . one who appears and disappears at will . . . who changes hamburgers into money . . . and who has the ability to make other mysterious changes. The most important change is in Jeff's attitude.

He succeeds in making Jeff see things through different eyes. He makes Jeff realize that companies, like people, have to have "a little something" left over after expenses are paid—the profit a company needs to expand and upgrade its people; and that there is a direct relationship between people and profits.

A Lot of People Sell Hamburgers was recently previewed before 1200 McDonald's dealers at Doral Country Club in Miami Beach, Florida, kicking off the nationwide campaign to cut waste.

Starring Paul Cook and Scott Wallace, the film was produced by Joe Betzer, written by Helen Krupka and directed by Cary Brown. Cameraman was Jack Whitehead with art and animation by Oscar Herz.

Accompanying the film at showings throughout the country to McDonalds' employees is pre-showing announcement and meeting leader's guide for participation.

At reception preceding the banquet (above), Herbert Rosen, festival chairman (standing), chats with (l. to r.) Mr. and Mrs. J. Damasceno Goncalves Covao, Mr. and Mrs. Jorge Rodrigues, and Mochihiro Uchirii. Left to right below are: Louis Mucciolo, Audio Productions; Mr. and Mrs. Walter King, Directors Group; and Samuel Sandrof, Audio Productions.

Record Crowd Marks 12th New York Festival

THE LARGEST attendance in its 12 year history was only one of the accomplishments marked by the International Film & TV Festival of New York at its awards ceremonies in October.

Once again, the festival was highlighted with an informative seminar program in conjunction with the film award event.

During the awards banquet, as those attending were dining and dancing, colored slides flashed

along one wall telling the audience who had won second and third prizes. A.V.E. Corporation did a commendable job in devising the multi-media system of announcing the smaller awards painlessly.

Top honors at the festival went to:

Circle Productions for *Checkered Flag Audiovisual Kit* produced for Field Educational Publications, Inc. (filmstrip); MPO Productions for 1970: *An Escape Odyssey*, produced for Oldsmobile Division of General Motors (best industrial); Van Prag Productions for *The Results*, (best educational); Fred A. Niles Communications Centers for *A Fable*, produced for Mobil Oil (best featurette); Sokolsky Film for *Goldiggers of 1969*, sponsored by Menley & James Labs (best TV commercial). And the National Broadcasting Company was presented a grand award for *Five Cities* as the best public service television program.

AWARD WINNING MOVIE NOW A CHILDREN'S BOOK

WHEN A BOOK becomes a movie, that's old hat, but today when a movie becomes a book it's worth noting.

The Day the Bicycles Disappeared, a safety film created for the AAA Foundation for Traffic Safety, has been adapted into a 64-page colorful luxury children's book by writer-director Gene Starbecker.

Starbecker originally conceived the children's film-fantasy for the Bay State Film Productions. To date, over 1,000 prints have been sold.

In addition to excellent critical response, the motion picture was awarded the Silver Cup as the best U.S. children's film entered in the International Film Festival at Ischia, Italy.

Executives of the Robert Luce Publishing Company of Washington saw the film version at the awards presentation of Cine and immediately commissioned a book. Parents, educators and safety advisors have been even more enthusiastic about the book than the film. Here are some of the quotes:

"'The Day the Bicycles Disappeared' may well save your child from serious or fatal injury." — Burton W. Marsh, Executive Director, Institute of Traffic Engineers (a grandfather)

"After reading or hearing the story of 'The Day the Bicycles Disappeared' — every child will want to obey safe bicycling rules — for the bike's sake if not his own." — Calvin E. Larsen, Executive Director, AAA Foundation for Traffic Safety.

Written for children 4 through 10, this 64-page colorfully illustrated fantasy, "The Day the Bicycles Disappeared," retails for \$3.95, but Gene Starbecker has arranged with the publisher for readers of BUSINESS SCREEN and

members of the motion picture industry to purchase copies as gifts for their own children or grandchildren directly from the publisher at a special discount price. The cost is \$2.37 per book, which includes postage and handling.

Orders should be mailed to Robert B. Luce, Inc., Dept. P, 2000 N Street, N.W., Washington, D.C. 20036. Checks or money-orders should be made payable to Robert B. Luce, Inc.

**The Navy Explores
The Land Beneath the Sea**
Land Beneath the Sea, a 16mm color sound film, 24 minutes, produced by the Public

Affairs Office of the Oceanographer of the Navy, tells about the exploration of the ocean bottom by Navy oceanographer-scientists.

It was once thought that the ocean floor, often lying under miles of seawater, was almost flat, resembling a great plain, stretching from continent to continent. But with advanced equipment oceanographers have begun to examine the deeps. They have discovered great submarine mountain ranges and vast trenches whose depths would engulf our own grand canyon.

The land under the sea is as varied as the land above it. "Land Beneath the Sea" tells how the enormous pressures on the crust of the earth, the folding and buckling which gave the land its characteristic features, are just as extensive in the sea.

The film also tells about the land-building forces now at work in the sea, about volcanoes building mountains whose peaks appear above the water as fiery islands, and how most of the water that falls on the land eventually flows into the sea carrying much of the land with it.

Prints of the film are available on free loan from Public Affairs Offices of all Naval Districts.

Los Angeles Stars as Swinging City

Los Angeles is seen with a pleasure-bent eye in the fourth and latest film released by United Air Lines in its award-winning series, *Swinging Cities*.

The new film, *Los Angeles: Focus On Wonderland*, takes viewers on a "through-the-Looking-Glass" tour of Disneyland, Grauman's Chinese Theatre, Movieland Wax Museum, Aquarius Theatre, P.J.'s, Knott's Berry Farm, a movie studio lot, Griffith Park Zoo, beaches near Marineland, and on a visit to Hollywood Park races.

As with predecessors in the *Swinging Cities* series—*Honolulu*—Continued on page 70

lu, New York and Las Vegas—the Los Angeles film is designed for the young adult market. In camera technique, musical score and other details, the new release represents a sharp break with the traditional travelogue. Narration, for example, is omitted.

The 13½ minute color motion picture was produced for United by FilmFair of Los Angeles. The film, shot in both 35mm and 16mm footage, is provided without charge to community, travel and church groups through United's film distributor, Modern Talking Pictures, Inc.

Micro Expo Launches Debut of New Fiber

A one-day fair — housed in a giant geodesic dome and featuring participatory environments, fashions, fabrics and film — launched the debut of Anim/8, a revolutionary new fiber in New York, October 22.

Open to press and textile industry officials, the micro Expo was on view for one day only at Tavern-on-the-Green in Central Park.

A highlight of the exhibit was a continuous showing of a unique, interpretative art film created by William Claxton, of

MPO Productions. Created especially for the event, the film beautifully captured the movement and essence of stretch fabrics and fashions.

Anim/8, an acrylate elastomer, has received a new generic classification, anidex, from the Federal Trade Commission, and is said to be the first truly new fiber in ten years. It was developed by the Rohn & Haas Company, of Philadelphia, producers of Plexiglas acrylic plastic.

Strange Partners Live In Underseas Community

The tiny neon goby, an inch long mini-fish who wears a uniform of shimmering blue accented by two wide, white stripes down his back, runs a fish-cleaning service station in any typical underwater neighborhood. The goby's customers include virtually every type of sea creature, but among the most interesting is the fierce, green moray. Fellow fish respect the moray's powerful, sinuous body, razorsharp teeth, and killer instincts. Yet the tiny goby is so valuable to the menacing moray that he is jealously protected.

Moving quickly the little worker sets about scouring the

moray's skin by sucking in particles with his rapid, vacuum-like mouth. He has a regular work pattern, moving along the moray's back and even venturing between the jaws. Like a live toothpick, he pokes at the extensive bridgework. And if he ventures too far and disappears down the moray's throat, he is

In return for the moray's protection, the tiny goby keeps him clean.

belched out and sent tumbling, tail over fin.

As in most successful busi-

nesses, there is competition. The orange and white coral shrimp runs a station down the block. The shrimp uses his many spindly legs and strong claws to snatch up particles from his customers. He even conducts an advertising campaign with his constantly flailing antennas.

Coral shrimp, neon gobys and their customers are representative of a way of life known as mutualism, a relationship in which two partners benefit each other. Mutualism is one aspect of symbiosis, a scientific term meaning "living together".

Other symbiotic partners of the sea are the remorah and the shark. The remorah uses suckers on his underside to hitch rides from anyone, including the shark, as though he were taking a bus around town. Because the remorah neither helps nor hurts the shark, they have a commensal relationship—benefiting one species while the other is not affected in any way.

A less happy relationship is parasitism, in which one species lives at the expense of another. One such parasite, the lace-like trematode, is a microscopic vampire. It lodges itself in the gills of fish and slowly sucks their blood.

These underseas relationships are one of the subjects of an educational motion picture series, *The Living World of the Sea*, produced by Reela Educational Films of Miami. The series is available from Sterling Communications, Chicago.

An American Industry Gets Involved in People

Gulf Oil Corporation's *Power for People* is a motion picture stressing the similarity in the daily lives of people the world over and reveals one American company's diverse efforts to unlock the door to a better life for them.

Five continents of scenic panoramas and fascinating faces under "hard hats" working with sampans, ships and trucks, in service stations and research centers are shown with the Gulf Oil logo appearing in every language. The film is a tribute to American know-how aimed at a better life for all through the miracle of matter converted into energy.

This 28-minute color film is being distributed by Association Films, Inc.

World Wide Search for Oil Continues Successfully

Since no problem facing man is more serious than his need for greater supplies of energy to feed the machinery of modern life, Atlantic-Richfield's latest film is both timely and reassuring.

Produced by Audio Productions, *Oil Is Where You Find It* is a 30-minute film designed to provide information for stockholders, employees and the general public about Atlantic-Richfield. In addition to stockholder and employee showings, present plans call for distribution of the film on TV.

Through its two-fold emphasis on (1) the need for providing increasing sources of energy for the future and (2) the success of Atlantic-Richfield in locating

rooms through a panorama of exploration sites "not only in the Gulf of Mexico but in desert scrub, mountains, valleys and even beneath city streets."

The longest sequence of the film, recording the search for oil beneath the remote tundra of Alaska's North Slope, takes on the character of a good mystery thriller as man uses his powerful paraphernalia of civilization against an environment so hostile that a mechanical breakdown could mean the end of all traces of existence there. Contrasting shots of an Arctic storm with scenes of workers carrying on their lives in snug shelters make for a strikingly dramatic element.

The drama is heightened by the narrator's matter-of-fact geologist's language set against the visual effect of men drilling "down through the permafrost—permanently frozen mix of gravel, mud and ice that forms a layer a thousand, maybe 1300 feet thick."

The weather is warmer as the film shifts to Lake Maracaibo in Venezuela where crude oil is easily transported to refineries in the U.S.

In the Persian Gulf, multi-colored pastel tanks, buildings and processing plants stand out on an island against the blue background of the Gulf.

In the North Sea, workers man a rig piping natural gas to Great Britain before relaxing over dinner and a card game.

Back in the Arctic wastes, drilling experiments are conducted to unlock a giant reservoir of crude oil. The test crew traces track occurrences at the surface that reflect stress below.

In its creative use of locations, sharp exposition of the points to be made, *Oil Is Where You Find It* is a film of distinction.

The film is heightened by the visual effect of men battling the Arctic elements in search of new energy sources.

new sources, the film combines public and stockholder interest by means of a descriptive journey through the company's wide-spread fields.

The film presents a striking range of settings. Starting with off-shore drilling operations in the Gulf of Mexico, the film

An array of shots show the striking geometric composition of oil operations in the Gulf of Mexico.

Zoom Attachment For 16mm Projectors

The Varazoom, attached to the prime objective lens of a 16mm projector, provides various focal length lenses from the standard lens. The variation in focal length permits the same 16mm projector, without changing the lens, to be used in any number of classrooms, auditoriums or board rooms requiring different focal length lenses to achieve an acceptable image size. For example, a projector with the Vara-

zoom attachment for 16mm projectors produces various focal length lenses from the standard lens.

zoom attached can be placed anywhere from 14' to 22' to fill a standard 40' screen.

The Varazoom attached to a 2" prime lens will produce focal lengths from 1.6" to 2.5". It also works with the condensing system of the projector to retain maximum light output. For details, write *Buhl Optical Company, Dept. BSC, 1009 Beech Ave., Pittsburgh, Pa. 15233.*

Cassette Cartridge Corp. Awarded Contract

Cassette-Cartridge Corporation has been awarded the cassette duplication contract from Universal Education Corporation, New York, for its Michigan Language Program. This cassette series is part of an extensive audio-visual program originally created by the University of Michigan for reading training for children.

In addition to duplicating cassettes for publishing firms, educational organizations and adver-

tising agencies, Cassette-Cartridge is the prime supplier of recorded cassettes in America to R.C.A. Contact *Cassette Cartridge Corporation, Dept. BSC, 220 East 23rd St., New York, N.Y.*

Assistant Editor is a Complete Editing Station

What its inventive developer calls "an entire new approach to present-day requirements for 16mm film editing," the all-new Behrend-originated Film Editor's Assistant combines every relevant tool needed by the editor in one convenient location.

The Assistant's 9" x 12" viewing screen gives the same viewing angle normally encountered in the projection room. This image is bright enough so that the machine can be used in full room light. Its two sound heads and basic controls provide for mixing of two sync sound tracks. The machine includes a footage counter, illuminated "trim bin" plus plenty of work space for splicers, scissors, tape, etc. More than enough storage space, a leader station are other key features.

The "drive" is in various speeds from double/sound speed to as low as three frames per second; an inching knob permits editor to move film a frame at

The Assistant measures 5 feet long, four and a half feet high and moves easily through a 30" door.

a time by hand. Sprockets are locked together by magnetic clutches which can be released by the flip of a switch, permitting easy change of the sync point. There is plenty of working clearance between the picture head and the light source, allowing for easy marking with grease pencil (marks transmitted to bright viewing screen).

The Assistant Editor is a complete editing station. All work is done there in assembling the film;

when complete the picture can be previewed on the same machine. This unit was designed on the premise that most industrial films are made by "piecing together" the picture information, sound information (dialogue) and sound effects, which includes music.

Write: *Behrend's Inc., Dept. BSC, 161 East Grand, Chicago, Ill. 60611 or phone (312) 527-3060* for a detailed descriptive folder on the Assistant.

Videographic Kit Available From Sony

A Videographic Kit for instant production of visual aids has been developed by Sony Corporation of America.

The Videographic Kit contains six sheets of lettering, four sheets of illustrations, 12 reuseable visual boards, a lettering level, letter removal tape, a burnishing tool with crafting point, a felt tip pen, a desk top easel and an instruction book.

The kit is designed to replace time-consuming, make-shift efforts necessary to put together effective visuals for closed circuit productions. Write *Sony Corporation of America, Dept. BSC, (47-47) Van Dam Street, Long Island City, New York 11101.*

Versatile Accessory Holds Slides or Cards

The Macro-Stage, a slide/title holder accessory for the Beaulieu 4008ZM Super 8 camera, can be attached in seconds to the sun-shade filter holder on the front of the Angenieux zoom lens. The assembly can be rotated 360 degrees around the lens for special effects. It accepts regular slides as well as title cards and other types of opaque

Slide/Title Holder accessory attaches to the 4008ZM Super 8 camera.

or translucent art materials.

A plastic box allows the user to place live insects and other small objects in front of the lens and always have them remain

within the field of view and in focus.

Further information is available from *Cinema Beaulieu, Dept. BSC, 14225 Ventura Blvd., Sherman Oaks, Calif. 91403.*

Complete Line of Film Rollers from Treise

A complete line of film rollers for lab processors features ball-bearing design insuring minimum film pull and smooth processor performance. All rollers are precision molded of durable plastic, including the core itself. The lands in the rollers are angled so that only the outside edges of the film touch and the image never comes in contact with the roller.

Treise film rollers are available in many sizes and types.

In addition to the standard rollers are other models for use with unperforated or multiperforated film or any type of film on tendency drive processors. For complete information, write *Treise Engineering, Inc., Dept. BSC, 1941 First Street, San Francisco, Calif. 91340.*

Sight, Sound Desk-Top Communication Center

The AVC-10 desk-top audio video communicator allows the operator to watch, talk and listen to as many as five locations without leaving his desk. He can select any location in his operation for viewing and be on-the-spot. He can ask a question and see and/or hear the answer. The AVC-10 is applicable to management/supervisory situations in warehousing, production line operation, hospitals and nursing homes: anywhere where a time-saving link is needed.

It can serve as a security or theft deterrent device. The operator can monitor several top priority areas constantly without exposed cameras. An auxiliary input is provided for the additions of an FM tuner or other

**IT ISN'T AN ORIGINAL SCORE . . .
IT JUST SOUNDS LIKE ONE!**

The DE WOLFE MUSIC LIBRARY swings you completely away from that old, tired "canned music" sound. We're constantly combing the music world here and abroad to record all the contemporary sounds of today.

Whether it's an 8-second TV commercial or an 80-minute film, DE WOLFE has what you need. Cool. Young. Classical to modern jazz and rock. You name it.

Write or phone today for the new, easy-to-use classified catalog, and, of course, sample discs in any category . . . strictly on approval.

control provides uniform picture output over wide variations in scene illumination.

The CC-450 has an integral recessed 5-inch viewfinder which eliminates the need for a bulky viewing hood. The viewfinder can be used as an on-site monitor.

More information is available from *Ampex Corporation, Dept. BSC, 2201 Estes Avenue, Elk Grove Village, Illinois.*

Industrial TV Camera Has Many Features

The Model ITV-15 industrial TV camera features advanced circuitry and all-solid-state construction. It is ruggedly designed for continuous duty in closed-circuit applications such as surveillance, and offers good picture quality for recording and remote-video presentation of educational, clinical and industrial material.

Standard features include a C-mount f/1.9 lens, 1-inch vidicon interchangeable with an IR-sensitive vidicon, 525-line scan, 500

The ITV-15 weighs only eight pounds.

line resolution, minimum sensitivity of 10 Lux with automatic compensation for varying light intensities, RF and Video outputs and switchable positive/negative image reversal.

THE MIDWEST STUDIOS SOUND AND PRODUCTION SERVICE STUDIO

Midwest Studios, Inc. has the finest physical facilities in the Midwest for the production of sound motion pictures or videotaping . . . a production man's dream come true! Here, under one roof, is a complete service studio available to any organization.

Midwest Studios, Inc. has the finest physical facilities in the Midwest for the production of sound motion pictures or videotaping . . . a production man's dream come true! Here, under one roof, is a complete service studio available to any organization.

PHYSICAL DETAILS:

This sound studio has *two* stages. The main sound stage is 100 feet long by 60 feet wide, height to overhead catwalk 30 feet. Catwalks on both sides of the stage 16 feet from floor. Ground level entrance to stage for passenger cars and trucks. Stage is equipped with overhead electric crane. The second stage is 40 feet long and 24 feet wide with a 14 foot ceiling.

OTHER PLUS FACTORS:

3000 amps of 120 volt AC current distributed to stage plugging outlets; hundreds of feet of cable . . . A permanent sweep set, as well as miscellaneous sets and components . . . Sepa-

rate make-up and dressing rooms for men and women . . . Screening room . . . Modern kitchen . . . Carpenter shop with power tools . . . Large fire-proof vault . . . Fully equipped editing room . . . Production office facilities for units renting the stages . . . Conference room available for top executives' "office-away-from-the-office" while working in the studio.

Midwest Studios, Inc. Operational Policy

Midwest Studios, Inc. is owned by a realty corporation and will not compete with its service customers. No production personnel will be employed by the studio corporation. A producer desiring to rent studio space may bring his own personnel and equipment. However, upon request, Midwest Studios will supply or suggest sources of personnel needed, such as directors, set designers, cameramen, sound men, carpenters, painters and other technicians. Talent sources also available. Arrangements may be made through the studio for any and all types of equipment as required.

Color TV Projector Introduced by Amphicon

The Amphicolor 1000, an all solid state full color television projector, provides brightness and sharpness for large screen use in classrooms, lecture halls and auditoriums. All controls are easily accessible and simple enough for non-technical personnel to learn to operate easily.

The Amphicolor 1000 provides bright color whenever necessary or desirable.

The electronic and optical systems are contained in one unit which is mounted on large rubber wheels for portability.

The projector is compatible with all existing television systems, cameras, flying spot scanners, UHF and VHF tuners and videotape recorders. More information is available from *Amphicon Systems, Inc., Dept. BSC, One Graphic Place, Moonachie, N. J. 07074.*

Bell & Howell Recorder Uses Half-Inch Tape

The Bell & Howell model 2966 is a helical scan video tape recorder with two heads which uses half-inch tape. It features stop motion, simplified controls and rugged portability.

Continuous recording up to

This portable black-and-white video tape recorder from Bell & Howell utilizes half-inch tape.

one hour is possible with a standard 7" (2,400') reel. It delivers more than 300 lines in

horizontal resolution, operates over a frequency range of more than 3MHz, and delivers 40db in video signal-to-noise ratio. Literature is available from Bell & Howell, Video and Audio Products Division, 7235 N. Linder Ave., Skokie, Ill. 60076.

Metro/Kalvar Adds Leader Stock to Product Line

Metro/Kalvar, Inc., has expanded its film products line to include leader stock for threading laboratory processing machines, photographic processors, and other equipment.

These new products are splice free, in roll lengths of 800' to 1,200', both 16mm and 35mm. Strong, long-lasting, polyester base stock, in 3-mil and 4-mil thickness, perforated or unperforated, clear or opaque, is available for immediate delivery.

A sample strip, description and price list will be sent upon request. Write *Metro/Kalvar, Inc., Dept. BSC, 745 Post Road, Darien, Conn. 06820.*

Transparency Jackets For Protection and Filing

Luxor No. 311 jackets protect overhead projector transparencies from dust, dirt and damage and are ideal for filing and storing. Ample space is provided on the cover for descriptive details and a two-way indexing tab provides for ease in filing and retrieval.

The jackets are 12 $\frac{3}{4}$ " square

Transparency jackets offer protection in storage or carrying.

with the opening die-cut offset for ease in removing transparencies. They are made of heavy manila stock. For more information and a free sample, write *Jack C. Coffey Co., -30- Inc., Dept. BSC, 104 Lake View Ave., Waukegan, Ill. 60085.*

BACKGROUND: Founded in 1911 (as "The YMCA Motion Picture Bureau," a division of the International Committee of the YMCA's), Association Films was the first sponsored film distributor in America. In 1949, the company was incorporated as an independent distribution service.

SERVICES: Promotion and Publicity: Promotes sponsored films through catalogs, special supplements (directed to teachers and program chairmen), advertising in educational and adult journals, individual film brochures, exhibits at conventions, publicity services. **Print Inspection and Maintenance:** prints are electronically cleaned and inspected after each use; repairs are made as needed and replacement prints ordered on sponsor's authority; scratched prints are given Perma-New treatment, as authorized; during the first 36 months of print life Association Films shares in replacement costs due to damages. **Monthly Reports:** sponsors receive detailed performance reports (data processed) which give audience size and composition; film-user evaluations and comments; course of study where film was used; bookings and showings (current, year-to-date, and cumulative); summary of coverage by states; and other data about performance and audiences. **Programming Services:** confirmation and advance booking notices are sent to users and sponsors on a daily basis; bookers assist organizations in arranging programs and special distribution concepts (Movie-A-Week, on campus, Travelcinema Films for Freedom, etc.) **Library Service Plan:** a professional "physical handling" service for sponsored film libraries that provides all regular services except promotion, as desired) and includes Sponsor Imprinted forms.

ASSOCIATION TELEFILMS: This division is responsible for the distribution of sponsored films to commercial and educational TV stations. It maintains daily contact with TV programmers, creates sponsored-film series and special concepts, prepares TV promotion kits, publicizes sponsored films in "TV Guide" and local newspapers and distributes newsclips and scripts to TV news departments. Current AF-AV series include: *Kyle Rote's World, Discovering America, Films for Freedom, Your Neighbor - The World, Theatre 30, Achievement, World in Focus and This Aerospace Age*, all comprised of sponsored films.

THEATRICAL DISTRIBUTION: Places sponsored films in motion picture theatres. Monthly reports, comment cards and advance booking notices are provided; promotion is sent to theatres; publicity stories are sent to theatrical trade magazines.

ASSOCIATION INSTRUCTIONAL MATERIALS: This division of Association Films handles the sales, long-term leasing and rental of educational, training and special purpose films and filmstrips. Acquisitions include sales, rental rights to more than 150 episodes from the award-winning series, *The Twentieth Century; Fair Adventure*, a lecture series on Shakespeare featuring Dr. Frank Baxter, *CBS Reports*; and *The Ryan Athletic Instructional Series*, sports training films produced by Dr. Frank Ryan offered to schools through local bank sponsorship or by direct purchase.

ASSOCIATION MATERIALS MAILING SERVICE: a service for mailing, storage and servicing of consumer information and educational materials; processes shipping of booklets, catalogs, premiums and giveaways; records and tapes; fulfillment specialties. MMS has facilities for weighing and metering, packaging, labeling, inventory control and delivery.

4 Projectors in 1

The KALART/VICTOR Moviematic™ STM-18 is a 16mm Sound Repeater Projector that does the work of four projectors:

- 1 — Self-contained "suitcase" model projecting from repeater magazine to built-in screen.
- 2 — Repeater model projecting from magazine to full size screen.
- 3 — Conventional projector projecting from reels of up to 2000 ft capacity to built-in screen.
- 4 — Self-contained model projecting from reels up to 2000 ft capacity to screen of up to auditorium size.

Ask your KALART/VICTOR Dealer for a demonstration. For the name of the one nearest you, or for more information, write Dept. M10-10-12, The KALART Company, Inc., Plainville, Connecticut 06062.

- I'm interested in a demonstration of the Moviematic STM-18. Please Contact me.
- Please send me literature on the Moviematic STM-18.

BACKGROUND: United World Films was organized in 1946. It is part of the Music Corporation of America, which includes Universal Pictures, Universal City Studios, Inc., Decca Records, Inc., and MCA-TV, Inc. In 1946 United World Films purchased the Bell & Howell Film-O-Sound library which was the largest film library operating in the United States. In 1946 United also purchased outright Castle Films, the largest producer and distribu-

Thinking about having a movie made?

Ask for your copy of . . .

33 QUESTIONS AND ANSWERS ABOUT INDUSTRIAL AND BUSINESS MOVIES

Movies are a powerful, persuasive, often overlooked medium — a medium that can help your company sell an idea, a product, or a service. But before you have a film produced, there are many facts and figures you should have at hand.

Write or phone for your copy of "33 questions and answers about industrial and business movies." It includes answers to questions such as:

- * My business is complicated and different — Could I really expect an outsider to write a good script?
- * How much does a good film cost?
- * Could we use some of our own people in our movie — engineers, technicians, service men?
- * How long will our movie stay up to date?
- * Are filmstrips just as good as movies?
- * We have a young man who is good with a camera. Why couldn't we shoot our own film, and have our advertising department write the script?

tor of 8mm and 16mm sound and silent motion pictures.

SERVICES: Since its organization, United World Films has distributed sponsored films for industry. Distribution is conducted for non-theatrical, television and theatrical audiences through 43 distribution offices located throughout the United States. United also produces and distributes classroom teaching films to the nation's schools. It makes available on 16mm film all of its own company (Universal) feature theatrical titles along with selected features from Paramount and other producers. Demand for its films comes from clubs, business organizations, colleges, universities, high schools, women's organizations, agricultural groups, etc. These audiences are constantly increasing and United uses this source of fresh new audience contacts for distributing their clients' sponsored films. In the distribution of their clients' 35mm sponsored films, United utilizes the theatrical knowledge, experience and contacts of Universal Pictures, its associate company. By reason of its affinity with MCA, United has the added opportunity to be in constant contact with the program departments of television stations throughout the country. These contacts are used by United in arranging showings for its clients' films.

PROMOTION AND PUBLICITY: United not only produces individual advertising and brochures for each of their clients' pictures, but also has available the extra advertising exposure via listings in other film catalogs produced by the company and distributed to 16mm audiences. United maintains booths and exhibits at the important convention and audio-visual demonstration centers throughout the world.

PRINT SERVICES AND MAINTENANCE: Because it is part of a professional motion picture distribution organization, United maintains the highest standard of inspection. Prints are inspected and cleaned utilizing the latest electronic equipment. Scratched prints are repaired under a special film coating process. United also shares in the cost of replacing any prints damaged during the early years of distribution.

TELEVISION DEPARTMENT: This department specializes in the distribution of client sponsored films to commercial and educational TV stations utilizing TV station contacts of MCA.

THEATRICAL FILM DEPARTMENT: Through this department, arrangements are made for quality theatrical distribution dates utilizing the experience and theater contacts of its associate, Universal Pictures. The latter company has had over 50 years experience in theatrical distribution and was the first organized motion picture company in the industry. United also makes arrangements for its sponsored clients through its film editing staff to produce 35mm prints from existing 16mm prints via a special process.

These 35mm prints are thereafter exhibited in the nation's theaters. Professional advertising is employed by United in the exploitation of its clients' films in the theatrical distribution.

NON-THEATRICAL DIVISION: Clubs, organizations, colleges, universities, men's and women's groups, high schools, agricultural groups, etc., are but some of the audiences supplied to their clients by this division of United. Film showings are arranged, advance booking notices supplied, monthly reports and recapitulations utilizing automatic business machines.

SPONSOR-GENERATED DISTRIBUTION: Where a client wishes to solicit and obtain bookings himself, United provides the physical handling, inspection, storage and distribution of such films utilizing its professional experience and facilities. Additional services include "custom" promotion and national research can also be obtained under this type distribution.

"CUSTOM" SERVICES: United produces a "custom" service which includes promotional kits supplied (under a special contract service with its client) by United to each film audience. This gives the sponsored client the added public relations effect surrounding each local community film distribution. It is accomplished by United's publicity division and advertising staff which prepares special news releases, film guides, advertising mats and special posters for use by local film exhibiting audience.

NATIONAL RESEARCH FACILITIES: United has engaged a national research organization on a permanent basis for the purpose of conducting a detailed research on questions of importance and interest to its clients. Such things as preferred length of films, content and the like is obtained from audiences throughout the country.

THE NOTEBOOK'S BEST FRIEND.

They'll retain more if you leave the lights on during film showings so they can take notes.

With the new MARC-300* version of Bauer's workhorse P6 projector, you can show brilliant, true-color pictures in full room light—or even daylight—in even the largest size room! Because the P6 automatic-300's metal-arc lamp puts out more than four times the light of conventional projector lamps.

The P6 automatic-300 projector also gives you 15-watts of optical and magnetic sound amplification (powerful enough to be used as a

p. a. system), automatic threading and optional 4,000-foot capacity.

The P6 is your pocket-book's best friend, too: as low as \$1650, with a sharp 50mm f/1.3 lens (other lenses from 25mm to 75mm optional). Accessories include microphone for p.a., reel rewinders, splicer, extension cord.

See your dealer or write Allied Impex Corp. 168 Glen Cove Rd., Carle Place, L.I., N.Y. 11514. Chicago; Dallas; Glendale, Calif.

Fresh start

for your old film

Whatever the condition of your film, Rapid can repair, restore and rejuvenate it.

No matter how scratched, brittle, oil-stained or dirty it is. No matter how badly spliced, Rapid can give it new life.

That goes for color as well as black and white; 8, 16, and 35mm.

What's more, after we've revitalized the film we give it a special protective coating that resists future damages.

So why spend a fortune on new prints? Come to Rapid Film Technique and renew your old ones.

Use handy coupon below to send for your FREE Trial Certificate and see for yourself what dramatic effect rejuvenation can have... on your films and on your budget.

MAIL COUPON TODAY!

RAPID FILM TECHNIQUE, INC.

Dept. B, 37-02 27th St.,
Long Island City, N.Y. 11101

Send me FREE Trial Certificate to test Rapid's rejuvenation process.

Send me FREE brochure, "Rapid Gives New Life To Old Film."

Please have a rejuvenation specialist call me to discuss my film library and show me how to save money.

Silent running and sync sound without a blimp— or how to spend the day shooting, not setting up.

Why is the camera crew so often called an hour before the cast? Lighting is one reason. Another is the time and effort it takes to set up a blimped camera. The NPR weighs 20 pounds — and it needs no blimp. Repeat: No blimp.

That's the day's first setup. What about the others? A crab dolly saves you from having to haul the rig yourself, but the angles you can get with it are limited. Taking one on location is a pain in the neck. The NPR gives you sync sound without a blimp—and it needs no AC power. If you want a *really* high angle, you can climb a tree with it in one hand, like a briefcase.

Changing lenses, setting the stop and focussing are all slowed down by a blimp. Changing magazines is

even worse. We all know what a disruption that can be. People leave the set; the lights are killed. When the camera — and blimp — are ready, the director has to establish the mood and continuity all over again, poor chap. The NPR's pre-threaded magazine can be changed in five seconds. If you happen to run out in mid scene, it just means another take. Immediately.

With the NPR you get more shot in a day. You also get precise reflex viewing, registration-pin movement, a rotating two-lens turret, a constant-speed motor with sync-pulse generator and automatic clapper, five second magazine changes and, of course, blimp-free silence. You get more shot. The camera pays for itself quicker. And

you don't have to get up an hour before the cast.

We have a brochure on the NPR that we'd like to send to you. Just let us know your address. Ours is Eclair Corporation of America, 7262 Melrose Avenue, Los Angeles, Calif. 90046. Call (213) 933-7182. You could also contact the Eclair service center in New York City. It's at 18 West 56th Street, and the phone number is (212) 247 0350.

KEYS TO LISTING DATA

The detail-in-depth of these listings of business and television film companies provides the sponsor, advertising agency and government film buyer with a complete picture of his prospective producer.

In addition to names of principal officers and data on services and physical studio facilities, the facts on "Recent Productions and Sponsors" show the nature of recent studio experience, of films produced in the past year. Preview current pictures as a prerequisite to purchases; bidders should also provide factual data on experience, staff, facilities and financial stability.

There was no charge or obligation whatsoever to these listed companies; every known source was contacted with three separate first-class mailings. Only those who furnished evidence of recent production or were newly-organized were accepted for unqualified listing in these pages.

channel mixing. Complete proprietary for wide screen 3 screen multi-media, multi-projector road shows automatically programmed and controlled. Two printing laboratories for color and black and white. Sound Advice for the Film Buyer

A careful study of the prospective producer's listing text is a prerequisite to film buying. See the pictures listed by the company; note the nature of client references. And if the prospective producer isn't listed in these pages visit his facilities; meet permanent staff personnel and view current pictures identified as his own productions.

KEYS TO LISTING DATA

The detail-in-depth of these listings of business and television film companies provides the sponsor, advertising agency and government film buyer with a complete picture of his prospective producer.

In addition to names of principal officers and data on services and physical studio facilities, the facts on "Recent Productions and Sponsors" show the nature of recent studio experience, films produced in the past year. Preview current pictures as a prerequisite to purchases; bidders should also provide factual data on experience, staff, facilities and financial stability.

There was no charge or obligation whatsoever to these listed companies; every known source was contacted with three separate first-class mailings. Only those who furnished evidence of recent production or were newly-organized were accepted for unqualified listing in these pages.

Sound Advice for the Film Buyer

A careful study of the prospective producer's listing text is a prerequisite to film buying. See the pictures listed by the company; note the nature of client references. And if the prospective producer isn't listed in these pages visit his facilities; meet permanent staff personnel and view current pictures identified as his own productions.

industry news

Bell & Howell Opens Skokie Video Center

Bell & Howell has inaugurated a wide range of closed circuit television services in its new Video Center.

The Video Center offers full-color, three camera studio rental, production services from complete program production to dubbing and transfer, and CCTV consultation. It also incorporates the former School of Instructional Technology, offering four courses in CCTV technical training and a pair of program production courses.

Production service rates and course information may be obtained by writing Bell & Howell Video Center, 7235 N. Linder Ave., Skokie, Ill. 60076.

Victor Duncan Opens Branch in Dallas

Victor Duncan, Inc. has opened a branch in Dallas, Texas to serve film producers in the Southwest.

In addition to rentals and leasing equipment, the firm offers sales and complete maintenance-repair service departments.

In Dallas, Duncan will also provide portable quartz lighting equipment for location use.

Joe Pope has been appointed general manager of the new Dallas facility at 2659 Fondren. Robert Burrell has joined the staff as motion picture engineer, responsible for customer service and maintenance.

The firm will continue to serve Midwest customers through its Chicago and Detroit offices.

New Honors For "No Greater Challenge"

No Greater Challenge, a film written and directed by Gene Starbeker for the Atomic Energy Commission, has received new honors following world-wide distribution. "Challenge," a First Place Winner at the United States Industrial Film Festival last

spring, has now been shown in over 20 countries under the auspices of the USIA.

No Greater Challenge premiered in February, 1969, in a specially designed theater at an international congress on water purification and desalination in Rome, Italy.

The subject, desalting the sea, is of major importance to many nations because much of the earth's surface is arid and currently unproductive. "No Greater Challenge" has presented an exciting new concept of nuclear-powered agro-industrial complexes to scientists and laymen from San Francisco to Kuala Lumpur.

The peaceful application of nuclear power to create fertile lands is a concept which knows no language barrier. A reviewer in Bamako, Mali commented:

"Mali is among the most arid nations in the world . . .

This film makes the point that atomic energy will make possible technology important to Mali."

The Canadian Council for International Cooperation noted that "No Greater Challenge" is "an excellent film, very fast, very handsome, very TODAY. Should be widely used."

Because of the excellent response from United States Information Service Posts throughout the world, USIA is currently making additional versions of "Challenge" in Spanish, Arabic, Persian, Russian, Korean, and Mandarin. French, Italian and Portuguese language versions are presently in distribution overseas.

Showcasing Those Pro "Experimentals"

By now it's hard to find a director of industrials who doesn't have at least one "experimental" film on his sample reel. A short something he had to get out of his system. Made by staff directors on "down-time" or by independents who know their way around the editing rooms and production company halls—these

short films are often quite good and almost always are seen only by friends and family.

Theatrical release is so limited it is virtually non-existent and the so-called "underground" seldom surfaces where it can attract much attention. While TV-oriented directors have been looking away from the medium for distribution of their longer work (60 seconds is not really the maximum length of a movie!) a film syndicator has found the way to showcase shorts on the tube after all, and soon viewers who thrill to a director's product pitch can also have a chance at the kind of movie-making he really has in his soul.

Richard E. Perin, president of Perin Enterprises, Ltd., has been plugging for about two years on this "impossible dream" and finally firmed the first TV deal, with WTOP-TV in Washington, D.C.—which will feature short films made by both pros and amateurs on a one-hour block of news programming stripped on Channel 9 in the Capital. Called "Filmmaker's Sketchbook", it will become a regular feature of "Martin Agronsky's Washington", and the initial plan is to program the shorts two times a week on Agronsky's show, using them like feature stories in a newspaper.

Perin's role is catalyst and consultant: on retainer by the Post Newsweek station, he plans to offer this service to other TV outlets across the country, finding and supplying them with contemporary, experimental movies.

This means that the short and happy films of our directors' "souls" will finally be able to move out of The Tin Lizzie and onto the nation's home screens, where someone out there may take a quiet and serious view of the talents that are being overlooked in extraordinarily large numbers through the nearsightedness of station executives who eagerly program creative commercials, but not the equally creative filmmaking of the same directors.

CREATE THE Right MOOD EVERY TIME with the

"MAJOR" PRODUCTION MUSIC LIBRARY

"MAJOR" offers you a full 65 hours of background production music for titles, bridges, background—for scoring, editing, recording and dubbing music for your:

- FEATURE PRODUCTIONS
- DOCUMENTARIES
- TV FILMS
- SLIDE FILMS
- ANIMATION
- INDUSTRIAL FILMS
- SALES PRESENTATIONS
- COMMERCIALS
- EDUCATIONAL

"MAJOR" specializes in sound—you get exceptional technical know-how and beautifully-recorded original music on LP records or 1/4-Inch Tape, or on 16 or 35mm Mag. Tape ready for a mix.

IMPORTANT: "Major" owns its own copyrights on all production mood music in its library. World rights available to you on a completely sound legal basis. Re-recording rights available on a "per selection" or "unlimited use" flat fee arrangement.

CINE Expands Program Draws Record Participation

AS PEACE MARCHERS milled in the streets outside, CINE (the Council on International Nontheatrical Events) held its largest and best awards program to date. In a premier two-day film exhibition, CINE presented 205 "Golden Eagles" to 156 of the nation's leading nontheatrical producers. At the final banquet, 65 additional awards from 60 foreign festivals were presented by dignitaries from 14 nations.

In a special message President Richard Nixon lauded the efforts of CINE as a "valuable service to international cultural exchange and greater understanding between men and nations." He expressed admiration for the efforts of CINE as a model of private industry cooperation.

A record total of 205 films received "Golden Eagles" from among 769 entries in this year's selection competition. Another 28 films made by amateurs were awarded the "CINE Eagle," a special recognition for youth and adults who do not make films for a living.

In expanding the annual exhibition from one to three days, 85 motion pictures were shown for a total of over 21 screening hours. Programs were at the National Education Association,

National Geographic Society, Smithsonian Institution, National Library of Medicine, Washington Film Council and the Statler Hilton Hotel, scene of the awards banquet.

Leading the list of dignitaries from 14 nations presenting awards were Ambassador Dobrynin of the Soviet Union, Ambassador Weerasinghe of Ceylon, Ambassador Guerassimov of Bulgaria, Dr. Sean O. Heideain Charge d'Affaires of Ireland, and Mr. Rafael Vazquez Charge d'Affaires of the Argentine Embassy.

In addition to the top prize

Ambassador Dobrynin from the Soviet Union led the list of foreign dignitaries presenting awards from foreign festivals.

Part of the 65 prizes from 60 foreign festivals that were presented at the CINE ceremonies.

winner, another 106 motion pictures received special diplomas or certificates honoring their selections for programming at overseas events.

The Golden Eagle film credited with the most significant awards worldwide in 1969 was *Why Man Creates*, by Paul Bass for Kaiser Aluminum and Chemical Corp. It took high honors in five festivals (Cork, Moscow, Trieste, Venice Golden Mercury and Venice Documentary) and diplomas or certificates in four others (Edinburgh, Melbourne, Nyon and Vancouver).

While the CINE ceremonies were in progress, *Why Man Cre-*

ates was also winning top honors at the International Film Festival in West Berlin and a special Inforfilm plaque for excellence.

A new feature at the CINE Exhibition this year was a symposium "Toward A World Audience." The workshop discussed increasing overseas circulation of American nontheatrical films.

CINE president, Reid H. Ray, newly with the Rochester Institute of Technology, presided. Master-of-ceremonies for the various screenings and award presentations were Peter Cott, Willis H. Pratt, Jr., Dr. Anna L. Heyer, Miss Emily Jones, Reverend David O. Poindexter and O. S. Knudsen.

Saul Bass accepts one of the many awards presented to "Why Man Creates."

John Peckham (left) one of many producers accepting Golden Eagles from CINE President Reid Ray.

James Damon from IBM Corporation (left) and Carl Lenz, president of Modern Talking Picture Service during the symposium on world audiences.

Price List From RPL

Recorded Publications Labora-
tories has announced a price list
for Cassette Duplication which
includes the economies of mass
duplication techniques as applied
to small order quantities. This
has been made possible by RPL's
technological break-through in
programming changeovers to al-
low completely automatic dupli-
cation of many small orders on
continuous flow.

Also included are prices for
RPL's exclusive printing, label-
ing, special packaging design and
multiple destination mailing for
business communications. For

copies, write *Recorded Publica-
tions Laboratories, Dept. BSC,*
1558 Pierce Avenue, Camden,
